Thread: [\[AUTOPILOT\]GUNBOT AUTOMATIC BITCOIN EXCHANGE PROFIT TRADER\[2700+ COPIES ALREADY SOLD\]](#)

Sweet - March 1, 2017, 1:02 pm

Hello, this is GUNBOT. A program that automatically buys altcoins for low and sells them for high for a profit. I highly recommend checking out the wiki for a much more in depth view of how GUNBOT works or if you are interested in manual trading guides. I also wanted to note here that I am not the original seller of this program, the original creator has given me full permission to help him with the sales of his program based on our agreement. If you would like to buy this program directly from the creator himself you can PM him on Bitcointalk [Here](#), just let him know you came from HF or from Sweet and he will give you a 10% discount. You can also check out his original Bitcointalk post [Here](#).

If you have any advice, recommendations, comments please reply to the thread or contact me through one of the contact methods: "PM, Skype, TeleGram".

F.A.Q.

Q. How long will it take for me to get my return of investment for the bot?

A. This mostly depends on your capital when using the bot, an average profit per day can range from 0.25% - 2.5% depending on the market.

Q. Do I have to pay for updates and new release of GUNBOT?

A. No, all new releases will be posted to HackForums and Telegram, as well with a changelog of the update.

Q. What is the best place for me to reach you or get more information about GUNBOT?

A. Telegram is the best place to contact me, if you have any questions about GUNBOT that is probably where I will answer them fastest. Just click the telegram button labeled "SweetSwag" on the bottom of the image.

Q. Why is GUNBOT so expensive, will the price ever go down?

A. GUNBOT is expensive since it is limited, if everyone were to use GUNBOT than the market would become flat from everyone using the same strategy, GUNBOT price may drop when it is moved to different bitcoin trading sites like Kraken.

Q. I am interested in your program but I want to see more information about GUNBOT. Where can I learn more?

A. At "<https://github.com/TheSweet/GUNBOT/wiki>" you can see all manual's and tutorials to see

exactly how to use GUNBOT and maximize your profits. If you have anymore questions please contact me.

T.O.S.

Spoiler ([Click to View](#)) 1. Terms By purchasing the GUNBOT, you are agreeing to be bound by these Terms and Conditions of Use, all applicable laws, and regulations, and agree that you are responsible for compliance with any applicable local laws. If you do not agree with any of these terms, you are prohibited from purchasing, using or accessing a GUNBOT. The materials contained in the GUNBOT software are protected by applicable copyright.

2. Use License Permission is granted to temporarily download one copy of the software for each purchased license of GUNBOT for personal, non-commercial transitory use only. This is the grant of a license, not a transfer of title, and under this license, you may not:

- modify or copy the GUNBOT;
- use the GUNBOT for any commercial purpose, or for any public display (commercial or non-commercial);
- attempt to decompile or reverse engineer any software contained in the GUNBOT package;
- remove any copyright or other proprietary notations from the GUNBOT
- transfer the GUNBOT to another person without permission from the original coder (hereby defined as guntharLab or Gunthar).

This license shall automatically terminate if you violate any of these restrictions and may be terminated by guntharLab or Gunthar at any time. Upon terminating your use of the GUNBOT or upon the termination of this license, you must destroy any downloaded software in your possession whether in electronic or printed format.

3. Disclaimer The GUNBOT software packages are provided "as is". The original coder makes no warranties, expressed or implied, and hereby disclaims and negates all other warranties, including without limitation, implied warranties or conditions of merchantability, fitness for a particular purpose, or non-infringement of intellectual property or other violation of rights or lost of money related to cryptocurrencies trading on Poloniex. Further, the original coder does not warrant or make any representations concerning the accuracy, likely results, or reliability of the use of the GUNBOT, included lost of money related to cryptocurrencies trading on Poloniex due to the different settings and configurations of the GUNBOT the end-user is allowed to change. However, there is an implicit "Money back guarantee": accordance with the Consumer Code , the customer has a period of 14 days of receipt of the GUNBOT to return it to Gunthar or guntharLab against the refund. This law is applicable and subject to conditions for all products shipped to the customer or downloaded from a server by Gunthar or guntharLab. Right to refund with the contractual conditions stipulated and the maximum time allowed for implementation of the entire process: maximum 14 days to the inquiry, from the date of receipt of the GUNBOT, ordered and maximum 30 days to return the GUNBOT within our walls. By our walls we define the official communication of the end-user of compliance to art.2 Use of license of this Terms of Service, comma 5: "Upon terminating your use of the GUNBOT or upon the termination of this license, you must destroy any downloaded software in your possession whether in electronic or printed format."

3a. Conditions for the Money Back Guarantee

Due to the different configurations of the GUNBOT you may apply that could lead to trading at loss, there are some criteria for the Money Back Guarantee:

Any claim made after the period of 14 days will not be accepted.

You shall not use a Security Margin too close to the altcoin daily variation (see Common errors to avoid using the GUNBOT)

You shall not use a Margin to buy or Margin to sell higher than the daily variation of the coin's pair you want to trade (see Common errors to avoid using the GUNBOT)

You shall not stop the GUNBOT to run while there is a buy order placed at Poloniex order book with your API keys, unless you manually place a sell order with same amount of the buy order and rate => last buy rate + 0.25% as market fee (see Common errors to avoid using the GUNBOT)

You shall not trade a coin with a continuous downtrend during the past 48 hours (see Common errors to avoid using the GUNBOT)

You shall not trade a coin that has increased or decreased its market rate over 50% of its latest month average rate (see Common errors to avoid using the GUNBOT)

You shall not put manual orders with the same API keys your GUNBOT is operating unless it has been provably set because of a manual market adjustment of a GUNBOT automatic order, due to an increased/decreased market conditions over 20% of its latest 24 hours average rate (see Common errors to avoid using the GUNBOT)

You shall not allow other users/bots to login with the same API keys the GUNBOT is operating with
You shall previously communicate your intentions to purchase an extendable 15 days license as a commitment to adhere to the Consumer Code's Money Back Guarantee

You shall provide, upon request, any reasonable proof of trading at loss using the GUNBOT and the default values described in The GUNBOT User's Manual and coder's recommendations, included screenshots, archived pages and bot/system logs.

Any infringement to these Terms of Service and to the Conditions listed in this section 3a, will invalidate the Money Back Guarantee and a final GUNBOT license would be issued at your account and all your funds held in escrow released

You and the escrow service you provided, confirm this agreement by purchasing the GUNBOT license and by proceeding with the 15 days Money Back Guarantee license and holding funds in escrow

If, for any reason, you or your escrow service are unable to provide the above-mentioned proofs of good use of the GUNBOT configurations, the Money Back Guarantee would be invalidated and a final GUNBOT license would be issued at your account and all your funds held in escrow released

If you or your escrow service, fail to release the funds upon termination of a 15 days license or upon an infringement of these Terms of Service, you and your escrow service would be implied in an open scam accusation and if the overdue balance persists, to a Court of Law.

4. Limitations In no event shall Gunthar or its suppliers be liable for any damages (including, without limitation, damages for loss of data or profit, or due to business interruption,) arising out of the use or inability to use the packages of the GUNBOT, even if Gunthar or guntharLab or a Gunthar or guntharLab authorized representative has been notified orally or in writing of the possibility of such damage. Because some jurisdictions do not allow limitations on implied warranties, or limitations of liability for consequential or incidental damages, these limitations may not apply to you.

5. Revisions and Errata The materials appearing on the GUNBOT's packages and software could include technical, typographical, or photographic errors. Gunthar or guntharLab do not warrant that any of the materials on its software are accurate, complete, or current. Gunthar or guntharLab may make changes to the materials contained on its software at any time without notice. Gunthar or guntharLab do not, however, make any commitment to update the materials.

6. Links Gunthar has not reviewed all of the sites linked to its software and is not responsible for the contents of any such linked site like Poloniex. The inclusion of any link does not imply endorsement by Gunthar or guntharLab of the site. Use of any such linked website is at the user's own risk. Poloniex is trademarks of Poloniex, Inc. Gunthar or guntharLab and the GUNBOT are not affiliated with or sponsored by Poloniex.

7. Site Terms of Use Modifications Gunthar or guntharLab may revise these terms of use for its software at any time without notice. By using this software you are agreeing to be bound by the then-current version of these Terms and Conditions of Use.

Full version of [T.O.S.](#) in Wiki.

Bailable - March 1, 2017, 1:12 pm

This seems pretty cool, how much could I get with a 1000\$ investment per day?

Sweet - March 1, 2017, 1:18 pm

(Mar 1, 2017 02:12 PM)bailable Wrote: [\[CITE\]](#) This seems pretty cool, how much could I get with a 1000\$ investment per day?

Average profit per day is around 0.5%-2.5, although it can vary daily a lot it all depends on the movement of altcoins, if you had 1 BTC on GUNBOT in 24 hours, on a good day, you could expect around 0.01-0.025 profit per day. Although if there is no movement in altcoins and they are all going down you could only see 0.001-0.005 profit.

D?ceived - March 1, 2017, 1:22 pm

Just wondering if there are any vouch copies going?

Sweet - March 1, 2017, 1:25 pm

(Mar 1, 2017 02:22 PM)?ceived Wrote: [\[CITE\]](#) Just wondering if there are any vouch copies going? Unfortunately, Gunthar doesn't want to give away any vouches due to an abuse of vouches on his forum but may give one out to a very reputable HF member.

EDIT: I just noticed asking for vouches is against the rules unless OP says its ok, so let me tell you know it is ok but only highly reputable members will be accepted and mostly only one maybe two.

redferrari - March 1, 2017, 5:49 pm

if someone used 20btc would the profit margin still be the same?

Sweet - March 1, 2017, 8:59 pm

(Mar 1, 2017 06:49 PM)redferrari Wrote: [\[CITE\]](#) if someone used 20btc would the profit margin still be the same?

Yes, the profit is a percentage meaning it can be utilized with a higher capital for the greatest returns. If someone where to use 1 btc of capital they could expect somewhere around 0.01-0.02 profit daily where as if someone used 20 btc of capital they could expect somewhere around 0.2-0.4 profit daily.

Valeant - March 1, 2017, 9:02 pm

Does this operate on exchanges who offer margin for leveraging trades?

Sweet - March 1, 2017, 9:04 pm

(Mar 1, 2017 10:02 PM)Valeant Wrote: [\[CITE\]](#) Does this operate on exchanges who offer margin for leveraging trades?

The bot does not work on margin trading sites although I think (not 100% sure) that Gunthar was possibly looking into it but wouldn't expect that soon. Gunthar has very good support if you asked he may even add it as a feature. But as of right now the main concerns are moving it into kraken and other sites and updating the GUI.

Sweet - March 2, 2017, 9:40 pm

New Update:

Supergun mode, a mode that follows pumps and dumps. In this update if you are trading a pair with GUNBOT using supergun mode it will buy that altcoin at the end of a dump and sell it when a pump is dying.

Along with this update there was a slight GUI update. So in this first commit, besides the bot instances being docked with your dashboard, we got two interesting new features: the best currencies to trade analysis available BEFORE to start the bot and updating every hour on your dashboard, and some working and useful new buttons on the consoles. To start the currencies analysis, just press the "STATISTICS" button and then the \$ symbol on your console (picture below explaining this step and describes all buttons)

With this update you can still use the previous strategy "1000s trade mode" if you prefer. If you are interested in more details about these updates a in-depth explanation will be on the Wiki soon.

MaxiPads889 - March 3, 2017, 12:42 am

Interested. Id love a trial copy (not vouch) to see how it goes with a \$500 test.

Sweett - March 3, 2017, 8:22 am

(Mar 3, 2017 01:42 AM)MaxiPads889 Wrote: [\[CITE\]](#) Interested. Id love a trial copy (not vouch) to see how it goes with a \$500 test.

Sorry, I'd like to give out a trial version of the program but Gunthar says no. He will only allow one vouch copy to a very very reputable member. Possibly if no more vouch offers come through I will see if he can give you a vouch copy.

The reason I can't is because on his forums someone abused the trial and vouch versions of GUNBOT and he doesn't want that to happen again.

redferrari - March 3, 2017, 6:32 pm

do you have a demo of the bot working? like on youtube or something

Sweett - March 3, 2017, 7:22 pm

(Mar 3, 2017 07:32 PM)redferrari Wrote: [\[CITE\]](#) do you have a demo of the bot working? like on youtube or something

I don't have any demo but here is an image of the latest bot's configuration screen:

Here is a gif of the bot working and updating, expect a GUI update of this soon:

Sweett - March 4, 2017, 7:23 pm

Still up for sale, As time goes on SuperGun update is showing much better returns than the previous method: 1000 trade strategy. If you have any questions about GUNBOT please let me know. One vouch copy still available.

?Synapse - March 4, 2017, 10:35 pm

This doesn't claim to make you rich overnight, instead it makes a fraction of your investment as profit daily, this is good for those who want a truly autopilot method without the unrealistic income and false promises. I'd definitely recommend this product.

Sweet - March 5, 2017, 7:40 am

Profit with GUNBOT since 2/22 running on SuperGun with a 0.5 BTC Capital:

<https://gyazo.com/78b2b6e62ef68edc4cd6ff41671ebcf>

Note: The bot wasn't running 24/7 in this period of time. The profits are gradually higher than 1000 trade strategy.

?now - March 5, 2017, 7:50 am

Oven Mitts - March 9, 2017, 1:21 am

This is dope! I'm very interested. Will have to come back when I've gotten some bitcoins.

Seems like an actually realistic autopilot method that isn't promising to make me \$100,000 in a month or some other ridiculous claim. Although, with a large enough capital, this could make quite a good bit of money.

Sweet - March 9, 2017, 10:42 am

Sivebeak - March 18, 2017, 1:58 am

How does it work if a coin like ethereum or dash goes crazy again, i mean with the pump and dump code inbuilt in it.

Sweet - March 18, 2017, 4:04 am

(Mar 18, 2017 01:58 AM)Sivebeak Wrote: [\[CITE\]](#) How does it work if a coin like ethereum or dash goes crazy again, i mean with the pump and dump code inbuilt in it.(within the supergun strategy)

Basically you have your max latest prices set and within the time frame it can measure how far the price has moved which can differ the decisions made, along with that it will follow red sell candlesticks and buy that pair then once it notices more sell volume after green buy candlesticks it will begin to buy. Theoretically it would buy for very low and sell for very high.

New update from Gunthar:

Pre-Release v.2.0b (Windows x86/x64) - Release name: "RUSSIAN ROULETTE"

This release is a complete refactor of the previous code, based on async. This should handle all poloniex errors, ports communications, disconnections and all other issues. Please note: the previous code was the real Russian Roulette as it randomly buy 10x the amount we set in configs and was loved by traders because generated 10x profit (Gunbot had a bug where it would buy x2-x10 the amount you set for it to buy due to a glitch on poloniex) - If you still want to use the old version, take care of your old folder and unzip this new one in a fresh new brand-

Changelogs:

GUNBOT is now portable: just grab the gunbot file and the configs and you dont need to install node anymore: run GUNBOT.EXE, configure the first pair, press START GUNBOT and then push the blue supergun button. 1000trades is available with the "PLAY" button instead.

Each open pair shows used configuration now

The bot now knows the price we bought and if you restart it or your internet goes down, it will sell at profit all your coins at start.

implementing async calls to wait for poloniex to send us the value we want: if errors happen, the bot will handle them and start a new iteration

implementing some snippets on console: supergun trend is now graphically exposed in console and you can follow MAX LATEST PRICE and see the reasons why the bot doesnt buy or doesnt sell yet

new config options available:

EMA1: 0.02,

EMA2: 0.04,

BUY_SMALL_PORTION:1, //you can adjust MAX BALANCE and force the bot to use lower amounts per trade: 0 is no trade, 0,5 is 50% of MAX BALANCE user per trade, 1 is 100% of MAX BALANCE used per pair. Default is !1

// limit of latest prices to show in console
MAX_LATEST_PRICES_SHOWN: 10,

//limit of latest directions to graphically represent
MAX_LATEST_DIRECTIONS:30,

//limit of latest directions shown on console
MAX_LATEST_DIRECTIONS_SHOWN:10,

some security bugs fixed: if you hack this with a not registered license, it will randomly sell at loss all your coins

EMA1 and EMA2 match polo values now: set their values 0.02 and 0.04 with 15 minutes candlesticks and you will see same values than polo

A special thank to all users that contributed to debug old code and create yet another great release. A special thank to Henkkaa and Sweet for their enthusiastic contribution to the forum, the support group and for helping us to keep up our morale

Please report any bug immediately!!!
Thanks!
~Gun

Errors - March 18, 2017, 5:32 pm

Let me just say, if you're on the fence about purchasing this, wait no more.

Do it, I'll drop a detailed review, or more detailed I should say but the support is great and the bot itself gets the job done.

Nice shit OP.

Windows2016 - March 19, 2017, 12:31 am

need more detail, how to video & tutorial

merkle - March 19, 2017, 1:38 am

I would love to see a advance feature where user can enter there own REST API / JSON API details to trade with the bot on new and different exchanges, hey lets face it most use the same API anyway it would be as easy as changing a couple of variables.

I like how you are honest with the profit and don't try to upsell with lies, 0.25% a retail trader can achieve in crypto without bot so this means this bot is real its no BS.

poisson - March 19, 2017, 4:29 am

Sent you PM.

I'll update this post in a few days with a review. :)

Is it possible to lose the money by using this bot ?
It won't sell the crypto unless it's higher than what you bought it for.

Bulma - March 21, 2017, 5:00 am

So this is safe to work with \$10k or even \$20k investments?

Sweett - March 21, 2017, 9:21 am

(Mar 21, 2017 01:49 AM)Bulma Wrote: [\[CITE\]](#) So as I understand, with \$2000 investments,I would make about \$20 daily, correct?

Is it possible to lose the money by using this bot ?Yes, Gunbot has a "security margin" which means if the altcoin you are trading falls under a certain price it will sell it to prevent losses, this can be set to any percentage in the configuration of gunbot. Although personally in my 3 months of use in gunbot I have not reached my security margin and sold for a loss.

(Mar 21, 2017 05:00 AM)Bulma Wrote: [\[CITE\]](#) So this is safe to work with \$10k or even \$20k investments?I would believe it is safe to use any amount with gunbot, there are users who use this

amount or even more daily with gunbot. Gunthar reported the most used in gunbot was 50 btc at a time from one user.

Rubentastic - March 22, 2017, 3:58 am

I've send you a PM with some questions. Very interested in this ?

Insomnia - March 22, 2017, 12:52 pm

I'm definitely interested in this although I have no background in coin trading. Is this program something that can be used by someone with little understanding of trading?

Another question: Is there a possibility of this program saturating the markets somehow? Hypothetically speaking- is it possible that enough users can use this program at once and cause issues with the market of these coins?

Thanks! :)

Sweet - March 22, 2017, 1:02 pm

(Mar 22, 2017 12:52 PM)Insomnia Wrote: [\[CITE\]](#) I'm definitely interested in this although I have no background in coin trading. Is this program something that can be used by someone with little understanding of trading?

Another question: Is there a possibility of this program saturating the markets somehow? Hypothetically speaking- is it possible that enough users can use this program at once and cause issues with the market of these coins?

Thanks! :)You could use this program without any experince with crypto currencies at all, although I would admit it would be a learning process and could become confusing at times if you wanted to learn. If you just wanted to buy the program and ask other for what configurations to use you could do that as well. The gunbot community could help you very much.

This program can get over saturated, if every gunbot user only used one coin that had little volume, it would get pumped; meaning the price would go up from all the buy orders and then drop to 0 from all the sell orders as it doesn't show true value. This is why gunbot is limited, although Gunthar talks about a unlimited version of gunbot called "black edition" I don't quite understand why it is unlimited yet, but gunbot will be moving to many different exchanges making it not so limited. For this reason gunbot's price will most likely increase greatly in the future as there are consist users to gunbot.

Let me know if I answered all your questions.

steven5210 - March 22, 2017, 3:31 pm

Changelogs:

Changelogs:

All feature of Linux versions plus:

implementing colors (bot instances are not tabbed yet, but you can use 2 buttons to select/show/hide the pair instance console you want to check). Final release will tab them all like in old ConsoleControl

Users can now save settings and reload settings they saved per each pair

Users can now change settings without having to restart the bot

Users can now save their API/Secret so they dont have to input them again when they close the bot
Initial commit for future features: graphics, profit/loss calculation, trading history (as long as i update the GUI you will see more tabs on your bot

Your Gunbot knows when to speed up: when prices are about to reach the bottom of a dump or the top of a pump, you will see your bot speeding like a crazy monkey! Dont get scared: we need to be fast when we need to buy and we need to be fast on market when it is time to sell.

Dont be scared to use short times and settings too: you will NOT get banned from Poloniex. The bot is completely refactored using async, so we send and receive informations from/to Poloniex respecting our time and their callbacks: ii anything goes wrong, your Gunbot knows what to do and will handle any kind of error, in the right way.

Maybe i forgot some features....

Please run the bot with extremly fast settings: short time delay, short prices list etc, let it run over a minimum of 8-10 pairs, and you will see your Gunbot being your profit generator.

Tips and tricks: your Gunbot now knows if you change settings and you could help him to have more profit. If you are the kind of person that likes to watch at your Gunbot with a corner of your eyes at Poloniex, you can use the Gunbot settings to raise %GAIN if you see a huge pump ;)

Same apply for the buy price: change ema values and you will see the price to buy to lower or raise, you can help your bot to ride the swings dinamically!!! Experiment with the ema values: if anything goes wrong, set the default values again (0.02 and 0.04) and start again to experiment until you

understand how to lower and raise the buy price.

A special thanks to all linux users in the Telegram group that helped me to debug this core and give us all a better Gunbot.

Please report any bug immediately!!!

Thanks!

~Gun

Errors - March 29, 2017, 12:40 pm

So I was given a VC of GUNBOT. I'll leave a review now and update it as time goes on. Feel free to pm me questions if you have any about it.

Pricing:

Gunbot advertises a price point of .1 BTC, at the time of receiving the initial VC this was about \$93, at the time of writing this review that would be \$103.5. That is cheaper than I'd personally expect considering what the bot strives to do in a legitimate auto-pilot fashion.

Setup:

Very simple. It is possible to have this bot up and ready in less than 5 minutes I would say, even if you're new to Polo.

Support:

My first day using the bot I had what seemed like a million issues, that were nearly all on my end. Support continued to help resolve the issue and since its been corrected I've been running polo without a hiccup.

Initial investment:

As this is a product brought to me by a fellow HF member claiming to make me profit auto-pilot I as many others I would assume, was skeptical. With that being said I was semi reserved to the amount I put in initially and left it at .275 BTC. At this moment I'm currently at an Estimated value of holdings: \$441.13 USD / 0.42493373 BTC. Now do not expect this amount of rise in profit from the bot. A lot has happened in the past couple weeks. Since I was given the vouch copy ETH climbed over \$30, ETC climbed about \$.80, BTC dropped well over \$200, and that's just the big headliners.

Claims to fame:

I don't want to harp here, plain and simple you will rise and fall in certain coins but overall the bot will do it's best to read the market and get in at the correct timing.

Longevity appeal/Overall:

I plan to update this thread weekly or so and let people know how I'm doing. Plan to invest a few bitcoin into this now that I know it's the real deal and if you're considering buying this bot, I'd say do it. If you're going to be spending your last .1 to purchase the bot I would say invest elsewhere. However, if you're willing to play the long game and let gunbot work I'm sure you'll be more than happy with the outcome.

SIM-3323508 - March 30, 2017, 8:26 pm

If you could throw me a review copy for like .04 BTC that would be awesome :)

Sweet - March 30, 2017, 9:54 pm

(Mar 30, 2017 08:26 PM)MoneyManeLaFlare Wrote: [\[CITE\]](#) If you could throw me a review copy for like .04 BTC that would be awesome :)

Sorry man Gunthar makes the rules, could only barely convince him to give out that one vouch copy to Errors, that will be the only one I can give out for now.

Although, and to everyone else, I can offer you a percentage off if you guarantee you will make a review of gunbot within a month or two of use. You would receive your discount after the review although.

CyberGuard - March 31, 2017, 12:01 am

Not sure I get the concept of your 15 day extendable license

I also have yet to see anyone post proof of profitable trades.

Bit odd for 350+ sold copies.

Sweet - March 31, 2017, 7:21 am

I think your talking about the 15 day money back guarantee, its pretty self explanatory you have a money back guarantee for the first 15 days based on the T.O.S. which can be found in full here:

<https://github.com/TheSweet/GUNBOT/wiki/T.O.S.>

Refer to 3a.

Also 350+ copies of GUNBOT have been sold in total, I have only sold around 20-25 copies on HF. I get this number based on the number of people in the Official Gunbot TeleGram Group.

Also here are some profit trades, the spreadsheet is made with a calculator that someone made in the community of Gunbot aswell:

Sweet - April 2, 2017, 7:02 pm

I wanted to note that the pre-release version v2.0.2 is now in beta and is almost ready for it's full release. Gunbot is being sold more than ever, there is almost 400 people in the official GUNBOT TeleGram group. If anyone has any questions about GUNBOT please let me know, also I am now offering a review discount where if you make a non-bias review of GUNBOT good or bad I will offer you a discount of 5% after it is done. The review would be done after 1-2 months of use with GUNBOT.

Sweet - April 4, 2017, 11:46 pm

Still selling GUNBOT, please let me know if you have any questions/recommendations.

Sweet - April 6, 2017, 8:34 am

New update from Gunthar:

Release name: "Beta Release v2.0.3b"

Changelogs:

Introducing you STEP-GAIN strategy at its first commit: this is a modification of supergun algorithm as discussed in the Telegram group. You now have 3 levels of buy % to set and 3 levels of sell %. Any of these levels is reached (in the dump or in the pump), the bot performs the max possible % of profit,

Examples:

BUYLVL1: 1, // first level margin to buy when currency decreases its value (example: buy when currency decreases 1% of EMA)

BUYLVL2: 3, // second level margin to buy when currency decreases its value (example: buy when currency decreases 3% of EMA)

BUYLVL3: 5, // third level margin to buy when currency decreases its value (example: buy when currency decreases 5% of EMA)

SELLLVL1: 2, // first level margin to sell when currency increases its value (example: sell when currency increases 2% of paid)

SELLLVL2: 5, // second level margin to sell when currency increases its value (example: sell when currency increases 5% of paid)

SELLLVL3: 10, // third level margin to sell when currency increases its value (example: sell when currency increases 10% of paid)

You can decide to use one or more levels of step gains by using the following configs:

BUYLVL: 3, // buy level you want your gunbot to reach (example: i want my gunbot to buy when price reaches level 3)

SELLLVL: 3, // sell level you want your gunbot to reach (example: i want my gunbot to sell when price reaches level 3)

Other fixes:

No more pending and unfulfilled BUY orders: the bot deletes the not needed orders after a sell loop

Fix 1000trades for 2.x

Fix "Best currencies" for 2.x

Tabbing all consoles in one single form

BEWARE: the bot is backward compatible ONLY with 2.0.2b save.json files. Any previous versions OR if you want to be 100% sure of a smooth transition: place sell orders manually of all your holdings.

Please report any bug immediately!!!

Thanks!

~Gun

New update from Gunthar:

Release name: "Beta v2.0.4 - Windows (x86/x64)"

Changelogs:

Implementing manual trades: you can now play manually @Poloniex and the bot will know. If you buy and let the bot sell for you, it will follow the logic of supergun and sell at profit. If you sell what the bot bought, it will look to buy again.

Fixing hot reconfig: now it works. You dont have to restart your bot anymore if changed configs

Fix "Poloniex is being bad...." error

Code cleanup

Please report any bug immediately.

Thanks,
~Gun

Also I would like to notify everyone of the release of Gunthy.org a forum made just for GUNBOT that has: Installation guides, Configuration support, and introductions to GUNBOT. More will be added to Gunthy making the use of GUNBOT more accessible and user-friendly for everyone.

Hey, I could definitely help you with some things depending on what your looking for, also what do you mean do I provide signal? LMK.

Sweett - April 22, 2017, 12:08 pm

New update from Gunthar:

Release name: "Beta v2.0.4 - Windows (x86/x64)"

Changelogs: This is a major release in its core edition: no GUI. You can run it on Windows following instructions here <https://gunthy.org/index.php?topic=47.msg94#msg94>

Linux/Mac/ARM follow instructions here: <https://gunthy.org/index.php?topic=72.0>

In all processes you can run it from command line like this:

"node index BTC_ETH poloniex" for poloniex market

"node index BTC_ETH kraken" for kraken market

"node index BTC_ETH bittrex" for bittrex market

Step by step guide to start it from old 2.x versions:

- 1- Copy all your "BTC_XXX-save.json" file to the new GUNBOT folder
- 2- Rename all your "BTC_XXX-save.json" file to "poloniex-BTC_XXX-save.json"
- 3- Create a config file by cloning the "BTC_ARK-config.js" per each pair you want to run
- 4- Fill your api/secret pairs for each market in each config file
- 5- start the bot from command line with the above mentioned commands
- 6- Profit!

Pre-requisites and environment:

You need node installed (you should already have it installed from 2.0.4b. If this is not the case, install the latest node (actually 7.9). The package already includes all node_modules. You can run "npm install" if you wish to update to the latest modules in the future. After installation, if you get some errors for missed npm modules, run again the command for the missed module only. For example: "npm install request" (if you got an error for missed "request" module. Or: "npm install

mathjs" if you received an error about missed mathjs module.

The Strategies:

With this release, you can operate on 3 markets (Poloniex, Kraken, Bittrex) using different strategies:

1- Pure EMA ping-pong: let your bot buy at a fixed % below EMA and sell at a fixed percentual above EMA.

These are the settings to use for this strategy:

- SELL_STRATEGY: 'GAIN', //sell strategy to use (BB or GAIN)
- BUY_STRATEGY: 'GAIN', // buy strategy to use (BB or GAIN)
- BUY_LEVEL: 1, //percentual from weighted price you want to buy if you want to use GAIN

strategy

- BITTREX_GAIN: 2, // margin to sell on bittrex
- KRAKEN_GAIN: 2, // margin to sell on kraken
- GAIN: 2, // margin to sell on poloniex

With this settings your bot will buy at 1% below ema and sell at 2% above ema (you can set sell levels per each market.

2- Pure Bollinger Band ping pong: let your bot buy close to the lower Bollinger Band and sell close to the higher

Bollinger Band.

These are the settings to use for this strategy:

- LOW_BB: 5, //percentual from the lowest Bollinger Band you want to buy
- HIGH_BB: 5, //percentual from the highest Bollinger Band you want to sell
- SELL_STRATEGY: 'BB', //sell strategy to use (BB or GAIN)
- BUY_STRATEGY: 'BB', // buy strategy to use (BB or GAIN)

Notice: when you first start your GUNBOT, it has not statistics yet, it needs to collect and build indicators.

Hence, to protect you from buying too high because the Bollinger Band are not completely calculated

yet, the GUNBOT will work using the GAIN strategy until it says the statistics are correctly loaded. It will

switch automatically to the Bollinger Band strategy when ready. So, be sure to properly set

BUY_LEVEL

and GAIN % in all markets!

3- A mix of the previous strategies: you can decide to BUY at fixed % and to sell at higher Bollinger Band. Or you

can decide to BUY at lower Bollinger Band and to sell at % GAIN from your bought price. Or you can decide to

restrict the Bollinger Band and use a Bollinger Band ping pong with smaller interval (play with the LOW_BB and

HIGH_BB settings to achieve this.

4.- Dont forget you have still available other 3 strategies: the SUPERGUN from 2.0.4b, the 1000trades...and the

beloved "Russian Roulette" from v1.3!!! They are all profitable strategies and you can decide to move over

multiple accounts with multiple strategies on the same coin!

I am completing the GUI for pinky-Windows users ;) I will push a GUI in the next 48 hours.

Known features not working (yet) in this release:

manual trades (i am building a GUI for this feature as it has been reported with some bugs in the 2.0.4b

email alert: gmail and some other providers added an extra security layer to prevent spam and it is being

refactored.

Please report any bug immediately!!!

Thanks

~Gun

Yea, I wish gunbot was cheaper but if you have the capital to invest a lot more you will return your profit of the price of GUNBOT and continue to profit with GUNBOT.

I would recommend using 0.10+ after buying GUNBOT otherwise your yields may be too insignificant for your liking.

Anyways, hope to see you in the future.

Sweett - April 30, 2017, 3:00 pm

The Dark Side Of Me - May 1, 2017, 6:33 pm

Does this understand the truth that USDT has dropped 10% and it is not worth of one dollar anymore and that's why e.g. BTC(etc.)/USDT price is raising, so you could even lose money if you

do USDT tradeseven if BTC is really raising, but not so much or does it matter?

Sweett - May 1, 2017, 7:12 pm

(May 1, 2017 06:33 PM)Siirto Wrote: [\[CITE\]](#) Does this understand the truth that USDT has dropped 10% and it is not worth of one dollar anymore and that's why e.g. BTC(etc.)/USDT price is raising, so you could even lose money if you do USDT tradeseven if BTC is really raising, but not so much or does it matter?

BTC/USDT is a little more complicated, last time i heard from Gunthar he advises all not to use BTC/USDT as a pair for some reason I can't remember, although for any other altcoin where this situation applies depending on the strategy that you use in GUNBOT it can read and identify certain situations where said Altcoin is overbought and will drop (Pump & Dump) and purchase during the lowest point or avoid purchasing at a high point.

More in-depth details about how the strategies work in GUNBOT can be found on the [Wiki](#).

WhoaNelly98 - May 2, 2017, 2:50 pm

So what's the return per day on using the gunbot and it works on kraken as well now too?

Sweett - May 2, 2017, 3:29 pm

(May 2, 2017 02:50 PM)WhoaNelly98 Wrote: [\[CITE\]](#) So what's the return per day on using the gunbot and it works on kraken as well now too?

This depends on your capital, percentage wise GUNBOT's profit varies greatly on the amount of trades it makes and the market. In theory, you could make as low as 0.0001% profit and as high as 1000% profit, but a good average seems to be around 2% profit daily or so.

GUNBOT is working on Kraken.

Still selling GUNBOT, let me know if you are interested.

WhoaNelly98 - May 8, 2017, 1:28 pm

Interested. How hard is it to set up? PM?

Sweett - May 8, 2017, 1:37 pm

(May 8, 2017 01:28 PM)WhoaNelly98 Wrote: [\[CITE\]](#) Interested. How hard is it to set up? PM?

GUNBOT can be complicating to set up at first, there is a lot of configuration that can seem alien to you at first but after a few days of using it, it will all make sense. Usually in the first few days you

would just use default or someone else's configurations and it is pretty simple.

WhoaNelly98 - May 8, 2017, 2:41 pm

Was there also like a super gunbot or something? Pming you.

Sweet - May 8, 2017, 2:58 pm

(May 8, 2017 02:41 PM)WhoaNelly98 Wrote: [\[CITE\]](#) Was there also like a super gunbot or something? Pming you.

Yes, SuperGun (now forged with step-gain) is a strategy that follows Pump in Dump in the bitcoin exchange website and will buy at the lowest low of a wave and the highest high.

More about supergun (step-gain) can be read here:

<https://github.com/TheSweet/GUNBOT/wiki/SuperGun>

GL with sales !Well GUNBOT works 24/7 when you are sleeping or at work/school. So for someone who doesn't have a lot of time or just someone who doesn't have a lot of experience with manual trading GUNBOT is very useful for that.

Still Selling GUNBOT, Hmu for Questions.

sk3000 - May 16, 2017, 3:24 pm

i have this bot for 30 days, bought from OP, but on another forum. and it gives me profit from 1-10% daily, depends on settings and market conditions. even default settings are fine, but if you want to experiment you can get lot more. i'm 70% in profit from original investment.

of course, you can reinvest your profit and make profit on profit or just cashout.

best thing about this bot is support, community is very active on telegram and forum, and developer is listening to community and coding new features and fixing issues daily.

here is my profit last few hrs on 1 pair, but you can run 30-50 pairs if you want:

Like I said I haven't sold all the programs but the owner Gunthar has people like me who split the profits half way so he has made upwards of 50 BTC from selling GUNBOT alone I am sure. Gunthar hasn't talked about price reduction any time soon I will ask him about it again.

I got really impressed by this tradingbot when i read about it. You mentioning in the topic that 1k copies has already been sold meaning that theres roughly a thousand of bots running on the

markets. Wouldnt this mean that some of the bots running in the same market would get stucked due to trading with eachother and asking for the same buy and sell prices?

Sweett - May 29, 2017, 3:43 pm

(May 29, 2017 03:11 PM)p1mm3 Wrote: [\[CITE\]](#) I got really impressed by this tradingbot when i read about it. While it is possible it would only happen if both bots made a sale/buy order if both seemed profitable which would never happen unless someone were to mess up their configuration completely because (in most siutations) the bot would not see the same price as one altcoin as both buy and sell. But eventually Gunbot will have too much volume in Poloniex, IF Gunthar kept selling it, although Gunthar plans to stop sales for GUNBOT in the future before too many copies are sold.

Still selling GUNBOT, News on a new update coming tomarrow.

Sweett - June 2, 2017, 12:34 pm

New update from Gunthar:

Gunbot 3.3 - SMART edition: Windows/Linux/MacOs/armv6/armv7 - Release name "Satoshi Nakamoto" (x86/x64)"

Changelogs: Fix ALLPAIRS priority and HotReconfig functions: ALLPAIR overrides CONFIG correctly now and have priority 0

Introducing early stages of machine learning on "price to sell" and BB calculation: the best price to sell is now automatically picked up by the bot, based on the strategy you using, compared to GAIN (which acts like a safety level to not sell at loss). One of the pros of this: if you restart the bot, you dont need to wait for your BB to be recalculated, they are now dynamically used as long as they update over time.

Introducing dynamic levels for stepgain: now the bot takes in consideration 3 levels to buy and sell instead of 2 and using the "SMART" function (enabled by default) it can now use all 3 levels as a fallback chain if the price fails to reach desired level. Basically: in the previous stepgain strategies we only used 2 levels effectively: now all levels are taken in consideration. Pros of this change: you dont have to set buylvl or selllvl anymore: the bot updates the level dynamically as long as the price swings up and down

Introducing early stages of machine learning for price to buy: the best price to buy is automatically picked by the bot comparing BB and BUY_LEVEL, Pros: if you restart the bot, you dont need to wait hours before BB recalculation is done and used.

Actually deleting all open orders (buy and sell) if security margin is reached;

Fix "waiting to sell 0": it comes from the hack that handles "multiple buys";

Fix "Missing boughtPrice!!!" error, which is more than a fix: implementing manual trades: you can now buy manually and the bot would know the last price you bought. Same with manual sell orders: the bot switches to buy loop if you sell manually what it bought.

Deleting both BUY and SELL orders if they get unfilled and the price/volume moves away from previous trading opportunity: the bot will find new home at actual market conditions.

Embedding both color and debug console in windows, so unexperienced users can understand better what is going on

Initial commit of "Start all pairs": when you first start the GUI it will ask if you want to start all pairs. NB: DO NOT DO IT AT VERY FIRST START OF THIS EDITION. Instructions will follow on forums.

Some refactor of GUI layout to avoid exceeding borders if too many pairs are open

Instructions:

How to start from a fresh install:

Double click on GUNBOT.EXE

Change coin names and exchange (Kraken failed the test protocol, please use only polo and bittrex: in the next 24 hours i will push kraken in this release and update this note)

Push SAVE SETTINGS button

Push START button

WAIT for both debug and color consoles to show up and the Alert box to automatically close

Repeat for every new coin you want to trade
How to migrate from v3.2:

Make a new folder and copy/paste all your save.json file from old bot to new one
Start GUNBOT.EXE

Change coin names and exchange, following the save.json files you copy/pasted. Example: if you have poloniex-BTC_ETH-save.json, change coin names and market in the GUI to BTC/ETH/Poloniex

Push SAVE SETTINGS button

Push START button

WAIT for both debug and colo consoles to show up and the Alert box to automatically close

Repeat for each save.json file

How to start again after the first install start:

Push LOAD SETTINGS button: in the new window, select the pair worker you want to use

Push START button

WAIT for both debug and colo consoles to show up and the Alert box to automatically close

Repeat for each worker file you previously saved with V3.3 ONLY !!!! (workers from previous versions are not compatible)

How to use the START ALL PAIR function:

Please i'm still tuning the delay time and waiting for kraken tests to complete, so use this with a max of 4-5 coins. If you use this with 50 pairs, you get only errors 429. When i will push kraken in the next 24 hours you will be able to start all pairs. I will update this note.

Start GUNBOT.EXE

Your bot will ask if you want to start all previously saved pairs: answer yes

WAIT for all consoles (both debug and color) to start and for all Alert messageboxes to close automatically. If after a few minutes you see some Alert messageboxes not closing, you can push the RETRY button: the connection timedout and the retry function will kick your pair to start: all fine!
TODO (in the next 2 days):

Push kraken in the release

Tuning delay times

Include legacy strategies and Best Currencies in the release: for now you can use v3.2 if you want those old strategies.

Please report any bug immediately!!!

Thanks!

~Gun

Sweett - June 3, 2017, 12:37 pm

Still selling GUNBOT, lots of good reports from this latest update.

Sweett - June 4, 2017, 1:33 pm

I will soon upload some profit reports from the latest version of GUNBOT that recently came out.

Sweett - June 6, 2017, 12:50 pm

Here are some recent profit reports of GUNBOT from daily users:

funtela - June 8, 2017, 3:55 pm

Seems like a lot of money for something I can lose profit on :/

Sweett - June 8, 2017, 4:50 pm

(Jun 8, 2017 03:55 PM)Funtela Wrote: [\[CITE\]](#) Seems like a lot of money for something I can lose profit on :/

Well, if you were to lose money with GUNBOT then I wouldn't really be selling it. While you can lose with GUNBOT you will never use more than you profit, it's usually a 90% profit and a 10% loss with trades. As you can see with the profit sheets I showed, which were randomly given in the GUNBOT Telegram group by daily users.

funtela - June 8, 2017, 4:53 pm

(Jun 8, 2017 04:53 PM)Funtela Wrote: [\[CITE\]](#) I've seen a few sheets with more loss than profit though.

While I haven't seen any profit sheets with more loss than profit it is possible that said person would have possibly configured their GUNBOT incorrectly and as a result lost more than they profited/deposited to poloniex.

Although I am unsure of the situation, many things could have happened but on a normally configured GUNBOT during a more stable part of the market then GUNBOT will profit.

Skil@h - June 9, 2017, 4:15 am

I'm really interested by the Kraken version of it.

Is that possible to use FIAT (euro for me) as reference ?

Because if Bitcoin drops at let's say 1500\$ the profits I would have made will be none since it's in BTC, but if I use Kraken with FIAT (euro) trading, I'd have more at the end of the day, no matter of the Bitcoin value.

Sweett - June 9, 2017, 7:08 am

Sweett - July 26, 2017, 2:15 pm

New update from Gunthar:

Release Candidate v3.3.3 - Poloniex/Bittrex - All OS - Code name: "Autopilot"

Changelogs: This is a major release introducing new concepts both in core and strategies. Starting by this release, Gunbot devs family is now bigger: @raffaeledonadono is now caring about the "core-engine" while i am focused on the "strategies" part of the code. This new devs structure will allow us to stay focused on the different parts of the code while double checking each other code with doubled security and coding accuracy.

Please: continue to forward all support requests to me, tho, thank you.

The final release will aim to:

Make Gunbot able to run as many pairs and as many exchanges as you want in one single process using a very low amount of RAM and CPU

Solve all past reported bugs

Give new Technical Analysis instruments for an advanced trading experience

Give a real cross-platform package including GUI for *nix/OSX/arm

Give Gunbot real-data from exchanges with no limit to "bot timing"

Give 3rd parties devs a Websocket API to build plugins

Give Gunbot capability to work as a live data-hub for 3rd parties software

Give end-users capability to build their own strategies based on TA indicators

This Release Candidate aims to:

Give existing customers a tool to liquidate their altcoin holdings with profit and give new liquidity to their Gunbot to continue trading at new price levels (healing from recent crypto-crashes)

Give a preview and receive feedbacks for a community-driven final release

This Release Candidate is able to:

Run all your pairs in one single console for Poloniex and Bittrex exchanges

Average down your "bought price" from existing "bags" and sell them at profit in 24/48 hours

Continue to trade all your pairs without creating "bags" or liquidating them at lower levels (with profit) if the value of the altcoin dropped below the bought price.

Fetching real data from Poloniex and Bittrex exchanges: you can now see the same values than exchanges for indicators (BB, EMA, etc). If Gunbot restarts, the indicators data will NOT be lost.

Trade all your pairs with a real and effective BB and GAIN strategy (SG and other strategies to be completed in a patch)

Deprecate bot timing: we are now "live" on the exchange and we run following microseconds tickers updates from exchanges

Fix all bugs reported in v3.3.2: double buys, wrong indicators, wrong priceToBuy/priceToSell calculations

included all 422 errors, stuck instances etc

Added TA indicators capability

Added "watch mode only" and "panic sell" mode: first mode would run gunbot without trading, second one would sell all altcoin at actual market price (WARNING: it might be at loss).

How to run v3.3.3 from existing v3.x

Disclaimer: v3.3.3 is backward compatible with any existing trades/balances. - v3.3.3 config files are NOT backward compatible

Step-by-Step instructions:

The concept: one of the main issues of Gunbot old versions, was to be unable to follow the price flow during up and down levels swings. If BB and EMA moved to new low levels and you bought during the previous price level timeframe, you would end with the unfamous "bags" in your portfolio. Despite we all "luv" bags because they represent cheap coins we were able to buy, if market conditions keep being bearish, "bags" would engulf our portfolio with unsold coins, hence missed trades because of low primary coin liquidity. The v3.3.3 "Autopilot" version, solves this issue with a simple wise move: averaging down your bought price and selling all "bags" at a profit in a short-term time frame, giving so new liquidity to your Gunbot and making it able to continue its profitable strategy on the new market level.

How it works: the leading indicators are still BB. Now we use live data from exchange so we can trick BB at a reliable value, same than exchanges. I tested this strategy with SMA: it triggers the average-buy order TOO EARLY, do not use SMA for this strategy!!

See the following scenario:

Your last buy order for coin X was at 0.001;

hackforums was at 0.0014;

Bear come in the scene and price drops to 0.00083 and now hackforums is at 0.00094;

Because hackforums value (0.00094) dropped below your last bought price (0.001), Gunbot buys again SAME AMOUNT OF COIN X

We have now a new "bought price" at $(0.001 + 0.00083) / 2 = 0.00091$ with an hackforums at 0.00094: WE CAN SELL AT PROFIT VERY SOON!!!

What you need to do to autostart this on your existing bags?

The Release Candidate is already configured to start this automatically on your existing bags. The only thing you need to configure are pairs you want to run on this. Let's see some config file format:

We are still without GUI so you will need to understand how the config file is structured: it is a json file

Sections in the config.js file need their synthax:

Exchanges/Pair section

```
"pairs": {
  "poloniex": {
    "BTC_XMR": {
      "strategy": "bb",
      "override": {}
    },
    "BTC_ETH": {
      "strategy": "bb",
      "override": {}
    },
    "BTC_ETC": {
      "strategy": "bb",
      "override": {}
    }
  },
  "bittrex": {
    "BTC-LTC": {
      "strategy": "bb",
      "override": {}
    },
    "BTC-PIVX": {
      "strategy": "bb",
      "override": {}
    }
  }
},
```

As you can see it is a simple json file but we need to respect commas, quotes and parenthesis format inside it. The tree is like this:

PAIR SECTION > EXCHANGE > PAIR LIST

If you have any doubt you can contact me for assistance about the right synthax to use or you can open config.js file with Notepad++ using its embedded code highlight feature.

Strategies section

The strategy section is preconfigured to start averaging down when it is needed and sell pretty much immediately with 0.6% of profit: if follows BB in buy (unless TRAILING STOP enters the scene) and then sells at 0.6% with GAIN (notice the hackforums setting is at 60 to not override GAIN). Start like this to get rid of your bags and let it run for 1 or 2 days. You will see your bot coming back to life on your poloniex/bittrex trading history (and balance). When you are satisfied of your bags recovering, switch hackforums setting at 40 or below at desired levels: you will meet a new GUNBOT: emotionless, continuously profitable, despite the coins swings.

Example of strategy to get rid of bags

```
"strategies": {
  "bb": {
    "PERIOD": 15,
    "BUY_LEVEL": 0.1,
    "GAIN": 0.6,
    "HIGH_BB": 60,
    "LOW_BB": 40,
    "PANIC_SELL": false
  }
}
```

```
}
```

Change to this configuration once you got rid of your bags

```
"strategies": {  
  "bb": {  
    "PERIOD": 15,  
    "BUY_LEVEL": 0.1,  
    "GAIN": 0.6,  
    "HIGH_BB": 40,  
    "LOW_BB": 40,  
    "PANIC_SELL": false  
  }  
}
```

Disclaimer: you need capital to average down. Rather you are able to deposit more bitcoin at your exchange account or you need some immediate liquidity from existing bags. How much capital or how much liquidity you need to start using this strategy? Same amount in BTC (or primary coin) of one of your bags: say you have a list of 10 bags > deposit BTC (or primary coin) amount equal to ONE OF YOUR BAGS HOLDING VALUE IN BTC (i.e. if one of your bags is ETH and its value in BTC is 0.02BTC: deposit 0.02BTC), or sell one of your bags (any of your choice) at market price so to give your account an immediate liquidity, if you are unable to deposit more BTC (or primary coin). You dont need to deposit a lot of BTC (or primary coin) to average down your bags: it is enough to cover just one bag only and your GUNBOT will start a chain of bags-recovering, getting liquidity as it sells your bags. Keep this in mind by now on when you use GUNBOT: dont use all your capital, GUNBOT will need a reserve in case averaging down is needed because market conditions.

How to start GUNBOT

Windows: compile the config.js file and double click on gunthy.exe

Linux/MacOs: compile config.js file and run ./gunthy

I'm pretty sure a lot of questions will come out and i'm looking forward to all of you bugging me 24/7 on forums and Telegram...but this is why we love GUNBOT!

Please report any bag immediately!!! ;)

Thanks!

~Gun

Sweett - July 29, 2017, 3:49 pm

GUNBOT is still for sale and I would like to point out that this update is showing once again to more profitable then the previous update aswell as some ease of access features have been added, if you have any questions about GUNBOT please let me know.

Also, I don't regularly update the autobuy link price so if you want a more accurate price please PM me on HF.

Sweett - July 31, 2017, 1:16 pm

GUNBOT still for sale, Gunthar released a small update for GUNBOT to make sure GUNBOT is prepared for the fork Possibly coming tomarrow.

BadBoy - July 31, 2017, 6:39 pm

I just wanted to ask. Are using bots like these banned on trading sites such as Kraken, Bittrex & Poloniex?

Sweett - July 31, 2017, 9:36 pm

(Jul 31, 2017 06:39 PM)BeatNode Wrote: [CITE](#) I just wanted to ask. Are using bots like these banned on trading sites such as Kraken, Bittrex & Poloniex?

No, well no official word from Bittrex and Kraken support that I know of although on Poloniex this is authorized and Gunthar has talked to Poloniex support several times with helping development of GUNBOT compatible with there site.

Sweett - August 4, 2017, 8:38 am

Still selling GUNBOT, reminding you that GUNBOT is compatible with Linux, Windows, and Mac.

Sweett - August 5, 2017, 12:17 pm

GUNBOT is handling this huge bitcoin price jump very well, a lot of users are reporting an array of profit from this price jump.

Sweett - August 14, 2017, 11:49 am

Still selling GUNBOT, please let me know if anyone has any questions.

Sweett - August 16, 2017, 11:33 am

New update from Gunthar:

Release Candidate v.4.0.1_core - All oS - Poloniex/Bittrex/Kraken/Cryptopia - Code name "2nite"

Changelogs:

Fix all reported bugs of v3.3.5

Bump Kraken to 4.0.1

Implement Cryptopia exchange

Implement all v3.x strategies: BB, Gain, StepGain (v2.0.4 style), PingPong

Implement Stop-loss

Allowing users to disable BUY orders

Implementing MIN_VOLUME_TO_BUY and MIN_VOLUME_TO_SELL to handle dust (if ever happens)

If we have altcoin balance lower than minimum allowed amount: we buy

Implementing a new trend watcher using TA lib

Implementing new averaged buy price based on @BeerK0in formula. Thanks Beer K0in!

Config.js explanations and instructions:

Pairs format per exchange:

poloniex: BTC_ETH, ETH_XMR, XMR_ETC, USDT_BTC

Kraken: EOSXBT, DASHXBT, GNOXBT, BCHXBT all others are XLTCXXBT. Fiat are ZEURXXBT.

Bittrex: BTC-ETH, ETH-LTC

Cryptopia: SIGT_BTC, ETH_BTC, CHC_BTC

Possible strategies (format is buysell for mixed strategies and strategyname for pure strategies):

bb (for Bollinger Band in both buy and sell)

gain (for GAIN strategy in both buy and sell)

stepgain (for SG strategy in both buy and sell)

pp (for PingPong strategy in both buy and sell)

bbgain (buy with BB and sell with gain)

gainbb (buy with gain and sell with BB)

bbstepgain (buy with bb and sell with stepgain)

stepgainbb (buy with stepgain and sell with bb)

bbpp (buy with BB and sell with PingPong)

ppbb (buy with PingPong and sell with BB)

gainstepgain (buy with gain and sell with stepgain)

steppain (buy with stepgain and sell with gain)
gainpp (buy with gain and sell with PingPong)
ppgain (buy with PingPong and sell with gain)
steppainpp (buy with stepgain and sell with PingPong)
ppstepgain (buy with PingPong and sell with stepgain)
New Trend watcher (former supergun trend):

it is active only in StepGain
it is in a very short timeframe: looks at very latest 5 to 8 x 15 minutes candles
It uses -DM and +DM from TA
It is very useful to spot pumps (limited to the StepGain levels)
It will be configurable after a short period of test from GBU clerks
Some example of configuration settings and their meaning:

```
"bb": {  
  "BTC_TRADING_LIMIT": 0.01,  
  "PERIOD": 15,  
  "BUY_LEVEL": 0.1,  
  "GAIN": 0.1,  
  "HIGH_BB": 40,  
  "LOW_BB": 40,  
  "PANIC_SELL": false, //set this to true to sell all your altcoin at market price (set BUY_ENABLED:  
false)  
  "DOUBLE_UP": true, //set this to false if you dont want to use the average down feature  
  "STOP_LIMIT": 60, //In this case it will sell all your altcoins if the price reaches -60% from bought  
price  
  "BUY_ENABLED": true, //set this to false to disable buy orders  
  "MIN_VOLUME_TO_BUY": 0.001, //if you have dust, set this higher than your dust  
  "MIN_VOLUME_TO_SELL": 0.001 //if you have dust, set this higher than your dust  
}
```

Provided config.js file must stay untouched: do not delete variables (even if you think they are not useful), do not change names of variable. Just add your pairs and change your values. Everything in "Strategies" section can go in "Override" of the single pair.

To verify the validity of your config.js use this tool <https://jsonlint.com/>

SUGGESTED STRATEGY AND SETTINGS: once again the best performances (unless you are in GBU) come with pure BB at 40/40 or even better at 45/45 with or without DOUBLE_UP.

Thanks to @raffaeledonadono for his precious code contribution. Thanks to all users that patiently tested and reported bugs of previous versions.

Please report any bug immediately!!!
Thanks!
~Gun

Sweet - August 18, 2017, 6:14 am

GUNBOT is still for sale, any Cryptopia users should know that GUNBOT is now available for Cryptopia along with Kraken, Bittrex, and Poloniex.

Sweet - August 19, 2017, 9:59 am

Still selling GUNBOT, expect information on future exchanges and black edition soon.

Sweet - August 21, 2017, 12:12 pm

New update from Gunthar:

Gunbot v4.0.2 - Poloniex/Bittrex/Kraken/Cryptopia - Core Edition - AllOs_x64

Any GUNBOT users make sure to update your GUNBOT.

Changelog:

Fix exchanges hangs on timed out requests

Set EMA1, EMA2, LASTPOSITION, AVGPOSITION, AVGMINIMUM settings configurable for new Trend Watcher

Fix WATCH_MODE

Tuning STEPGAIN family a bit more

Instructions:

This is a full install. If you are already on the previous v4.x, replace executable AND config.js

Config.js changes and explanations:

Since the v4.x we now use TA lib to calculate all indicators, Trend Watcher included. Default settings for Trend Watcher are already tuned for a short term watchdog: 5 to 8 candlesticks. You can tune and play with the following settings, to make Trend Watcher fit your trading style:

Given the following array we collect from "Tickers":

"period_storage_ticker": 300, //we collect an array of 300 prices

"interval_ticker_update": 25000, //we collect one price every 25000 ms (25 seconds)

These are the used variables in the Trend Watcher formula:

"LASTPOINTS": 1, //How many elements should be taken from the end of the array to calculate the last point.

"AVGPOINTS": 10, //How many elements should be taken to calculate an average.

"AVGMINIMUM": 0.00000001, //Ignore (i.e. return null) if the average is below a minimum

"EMA1": 200, //We use the latest 200 prices of the 300 collected as EMA1 (Each one every 25seconds - see above)

"EMA2": 50, //We use the latest 50 prices of the 300 collected as EMA2 (Each one every 25 seconds - see above)

"PERIOD": 15, //We use 15 minutes candlesticks in the EMA formula

Results for TrendWatcher: if Trend > 1 is an UPTREND, if Trend is < 1 it is a DOWNTREND.

Play with the variables above to tune it for your trading style, ask me in PM if you have doubts or quietly have a chat with one of the GBU Professors.

Once again thanks to @raffaeledonadono for his precious contribution to this code.

Please report any bug immediately!

Thanks!

~Gun

Sweet - August 24, 2017, 10:41 am

GUNBOT is still for sale, if you can't make orders on Kraken with your new version of the bot please try using an older version or get in contact with Gunthar for technical support.

Sweet - August 25, 2017, 11:50 am

GUNBOT is still up for sale, Please contact me via HF PM's, Skype, or Telegram. Skype being my most preferred. Contact via autobuy website may be slightly more delayed.

Sweet - August 28, 2017, 1:26 am

Still selling GUNBOT, just making a note if you purchase from the auto buy link and it is not tuned correctly to 0.10 (I have to value it in USD and update constantly with BTC price) I will ask for either the remainder of the 0.10 price to be sent to my personal address or for any extra fund sent to be sent to your personal address.

Sweet - August 29, 2017, 2:23 am

GUNBOT is still for sale, for the next two weeks GUNBOT will be 10% off (0.09 BTC) starting 8/29 ending 9/12. Please contact me about any questions you may have.

Sweet - September 2, 2017, 4:15 pm

GUNBOT still going for sale, 10 more days until the 10% discount ends!

Sweet - September 5, 2017, 12:09 am

GUNBOT is still up for sale, The discount will end in 7 more days, only one more week to get it for 10% off. Also any cracked versions of GUNBOT that were previously possible will no longer be made possible after Gunthar looked into a few.

Sweet - September 8, 2017, 2:17 am

GUNBOT still for sale, 10% discount only active for 5 more days, save \$45 by purchasing before 9/13!

CrazyCandy - September 9, 2017, 9:30 am

Wait you want 385\$USD? That's a little pricy... Let me know if you ever lower that price to something more reasonable.

Sweet - September 10, 2017, 6:45 am

(Sep 9, 2017 09:30 AM)CrazyCandy Wrote: [\[CITE\]](#) Wait you want 385\$USD? That's a little pricy... Let me know if you ever lower that price to something more reasonable.

Yes the price is 0.10 BTC what ever the value of that is in your currency. Gunthar makes the prices not me I can only lower it to 0.09 (10%). GUNBOT will only be cheaper with new editions such as Black edition which Gunthar has talked about to be sold for 0.05.

CrazyCandy - September 10, 2017, 9:44 am

(Sep 10, 2017 06:45 AM)Sweet Wrote: [\[CITE\]](#) Yes the price is 0.10 BTC what ever the value of that is in your currency. Gunthar makes the prices not me I can only lower it to 0.09 (10%). GUNBOT will only be cheaper with new editions such as Black edition which Gunthar has talked about to be sold for 0.05. But if I recall this was being sold a while ago for 0.10 btc. And a month or 2 ago the value was completely different from what it was now so I don't know why the price is still the same

Sweet - September 11, 2017, 2:06 am

Yes, the price was and always has been 0.10 for GUNBOT. That price has stayed the same, I have only ever lowered the price to 0.09 during discounts like the one active now.

CrazyCandy - September 11, 2017, 10:01 am

Indeed, that is what he told me, I asked if he will lower the price of GUNBOT as the BTC price is increasing and he said he doesn't care what the value of the BTC to Currency is just for BTC.

CrazyCandy - September 12, 2017, 5:55 pm

I wouldn't disagree I thought he would keep the price at \$100 USD, although for the price you can still ROI and continue to make profit, now, since the price is higher, it just requires a higher volume of BTC to profit more .

Sweeet - September 15, 2017, 12:02 pm

Speaking of the price being high, this is a good opportunity to get GUNBOT for cheaper as the price just dropped.

thelordofgames - September 15, 2017, 12:04 pm

I have seen this around some forums and can say that people seem to be doing really well with it!
Good luck with sales OP!
