Thread: [HackForums Username Checker](#)

hunter24957 - March 3, 2017, 12:12 pm

Hey HackForums, here's the basic source code of something I've been working on for the past few days. It's basically a mass username checker for HackForums usernames, this is just the bare-bones of what I'm currently working on but I thought I may as well release it because it may save people some time if they ever decide they need something like this or would like a cool OG username. Obviously you'd need to add stuff to it to make it more personalized; for instance the source code here can only import a username list but it won't be hard to get it to, lets say, generate usernames. My personal one is a lot more complete/complex and uses PyQt as it's GUI; I've been thinking about releasing it but I've still got a lot more debugging to do, give me a shout if you'd like to take a look at the source code. This has been wrote in Python 3.6 and is using the Requests, BeautifulSoup and time modules.

Anyways here's the basic source, happy coding guys!

Spoiler ([Click to View](#))SOURCE REMOVED FOR SHORT TIME DUE TO MANY USERS SAYING THIS IS NOT ALLOWED

Here's a screenshot of the one I'm currently working on if you guys are interested.

Plugs The Plug - March 3, 2017, 12:21 pm

This is cool man. Not sure if people will find much use in it, would be cool to have one of these for something like Instagram. It is still really really cool though man.

Good job.

SocialAgency - March 3, 2017, 12:23 pm

U created this program and your username is hunter24957

Something went wrong here xD

Thanks man, yeah it was just a challenge I set myself since usernames are not displayed in the URL. I'm definitely considering making a variation of this for a social network of some sort. ?

What are you talking about? my username is as OG as you can get... ?

Mr.Peanut - March 3, 2017, 12:29 pm

I think people would use this if it were a web client of some sort rather than an executable file. Just my 2 cents, pretty neat program.

Hopsin - March 3, 2017, 12:30 pm

Quite interesting. Thanks for sharing buddy, it can save some time I guess. Have a nice day ?

hunter24957 - March 3, 2017, 12:31 pm

Yeah, I'm currently trying to get familiar with Django so it's definitely a possibility. Thanks for the response!

Np. You too man ?

NinjaLeaks - March 3, 2017, 12:33 pm

Hahaha pretty nice program man! Probably gonna use it in the future :)

Is your gui one going to be made in Python as well or are you using something different for it?

hunter24957 - March 3, 2017, 12:36 pm

Yep 100% Python, well it's going to be built with PyQt but that's still Python, hopefully it's going to have a lot more features as well. If I get around to finishing it in the near future I'll probably post it here. Have fun with the source!

(?°?)?(???? - March 3, 2017, 12:55 pm

You're not allowed to make anything that interacts with Hackforums at this time. Good idea but not for this site unfortunately.

hunter24957 - March 3, 2017, 1:09 pm

Yeah thought so, that's unfortunate. I mean it's not causing any harm and can lead to people using more memorable usernames if they so choose. Tbf I really don't see anything wrong. If I released a web based exploit then that would probably be pushing it. If the admin so chooses he can remove this.

It's not necessarily causing more harm but it's causing more web requests than needed.

Np. You too man ?

With Django would you be able to port your already made project online? Or would you have to recode it?

debug - March 3, 2017, 1:16 pm

You're going to get slapped by omni for abusing the server. I suggest you remove the source now. He's done it for scripts FAR less intensive than this.

hunter24957 - March 3, 2017, 1:18 pm

(Mar 3, 2017 02:14 PM)Loses Wrote: [\[CITE\]](#) With Django would you be able to port your already made project online? Or would you have to recode it?

I would probably have to re-code it a bit yes, but the hard part is mainly Django it's self due to the complexity. If I were to port it I'd not only have to create the site but also change the code so it will get the text from the text boxes etc. It'll probably be a long and painful process but it's doable. Flask is probably the better one to use, but Django it just a better framework in general.

(?°?)?(???? - March 3, 2017, 1:27 pm

I still recommend you edit the OP.

hunter24957 - March 3, 2017, 1:27 pm

If he want's to remove the post I've no problem with it. I mean no harm, just spreading the Python love.

I'll take the source code out for now, but I'd like to know his input before I fully remove everything.

(Mar 3, 2017 02:27 PM)(?°?)?(???? Wrote: [\[CITE\]](#) I still recommend you edit the OP.

Yep sorted it out ?

Np. You too man ?

As a shitty Django developer feel free to hit me up.

Also, flask would be better for this job as Django is for larger applications
