People waste money on spreading methods they find in the ebook section.

Hopefully potential buyers will see this and decide not to waste their money.

BlackPanth3R - March 8, 2017, 6:35 am

Really nice thread, however I heard rumours about NoDistribute actually distributing..

Thought I'd just put it in here since you've got it in a list for safe scanning.

I'll always suggest hosting your files yourself, all public hosting exposes you to the danger of distribution.

BlackPanth3R - March 11, 2017, 10:31 am

When you talk about "hosting" you are referring to cpanels or shells? Which one? Also, what is the process of hosting your files yourself?

YayHar - March 11, 2017, 10:43 am

I will PM you about the last part of your question.

P.E.Investigations - March 21, 2017, 1:05 am

Thank you for this tutorial.

You wrote: Go ahead and buy yourself hosting [...]. Upload your stub (PDF/DOC) to your hosting...

Do you have recommendations for where to buy hosting?

That way and with the right domain name, email spoofing might not needed, right?

If I want to try silent DOC or PDF exploits what tools are best to get?

James Burnham - March 24, 2017, 2:42 pm
