Thread: [Remove iCloud from an activated device \(iOS 10.X\) \(Filza\)](#)

?lex - March 4, 2017, 4:16 am

This will pretty much show you how to remove an iCloud account from a JAILBROKEN activated device.

It's useful if you forgot your password and you want to restore your device.

Please do note that this WILL NOT remove the iCloud lock from the servers.

Step 1: Getting Filza File Manager

Open Cydia

Download Filza File Manager

Step 2: Removing the account

Open Filza File Manager

Now that you're in root

Go to "var"

Then "mobile"

Then "library"

And "accounts"

Delete everything in "accounts"

Now your iPhone should be free from that account.

kingchristo88 - March 4, 2017, 6:35 am

cool info ill give it a try

obviousaardvark - April 20, 2017, 6:13 am

Thank you this way SO helpful

I have a friend she was given a 6S by some douchebag. Instead of removing his icloud he just gave her his passcode and she was frustrated she couldn't do what she wanted with the phone. She asked me if I could do anything, so I checked and it was still on 10.0.1 !!

So I look like the hero/whiz and she has a brand new iPhone!

Really, thank you

Dubjay - April 20, 2017, 6:15 am

Would this work if you were to swap the icloud server with one of your own...?

obviousaardvark - April 21, 2017, 3:12 am

I must add too something that is probably clear to everyone here, but which escaped my friend's understanding.

DO NOT reset device (Erase All Content and Settings). Not only will you lose root (of course) but since erases the files did not destroy the files on apple's servers, once the device rebooted it asked for the original owner's icloud information.

abuki - June 8, 2017, 4:46 pm

please help me

i won to remove my locked i phone still have i cloud

jhune1026 - June 16, 2017, 8:31 pm

hey bro.. are you removing icloud? i got 6+ can you pm me..
