Thread: [Need Help With Dot Net Transition](#)

Mendax47 - March 7, 2017, 12:11 pm

I Wanna Do A BackColor Transition Of 3 Color Color.Red, Color.LimeGreen, Color.Aquamarine... And A Time Delay Of 0.5 Sec.. So I Did This...

```
Transition.run(this,"BackColor", Color.Red, new TransitionType_Linear(500));
Thread.Sleep(500);
Transition.run(this,"BackColor", Color.LimeGreen, new TransitionType_Linear(500));
Thread.Sleep(500);
Transition.run(this,"BackColor", Color.Aquamarine, new TransitionType_Linear(500));
Thread.Sleep(500);
```

But The Thread.Sleep Doesn't Work... Don't Know Why.. Please Help Me....

Zilog80 - March 7, 2017, 1:32 pm

Maybe a stupid question (sure...?). What the hell is Transition.run()?

I'm really sure this is not part from 'standard' .NET Framework and maybe is something you found somewhere

Ehhhhh...what he said. never in my time of .net have i seen such method. ?

BahNahNah - March 7, 2017, 4:33 pm

I dont know anything about the transition library, but I assume the thread.sleep "doesn't work" is because the transitions run on a different thread.

With a very quick look though the code, it looks like you can queue transitions something like this:
<https://github.com/UweKeim/dot-net-transitions/blob/master/Transitions/Transition.cs#L79>

+Haze - March 7, 2017, 6:32 pm

If the naming conventions and in consistencies isn't a dead give away that it's not part of the standard .net library then I don't know what will.

hfTP54 - March 9, 2017, 10:58 pm

There is a method to queue them but I say make ur own it's too messy.

I have no idea what you are asking.

It would block the UI thread, thus failing to create the 'transition' effect that the OP wanted.
