Thread: [Help with connecting TS3 server to a domain](#)

Smokey. - March 7, 2017, 1:54 pm

Hey!

I have a domain on citysites.se and I want to connect my domain to my teamspeak 3 server. I have tried some things but nothing has worked, as my domain site is different from others.

Anyone that perhaps can help?

This is the help site to change DNS. If anyone could give a guide on how to do this for my teamspeak server, please stand up!

<https://support.citynetwork.se/index.php...ditera-DNS>

EDIT: This is how the DNS config looks like.

Sent you a pm about this!

J?son - March 7, 2017, 2:15 pm

Forward an A record to your server IP

wait for propagation

Charger - March 7, 2017, 2:17 pm

Do you want it so that ts.domain.com connects to your team speak?

Yes, right now we have the IP adress. So we want the domain to be the conneting adress.
