Thread: [Custom Gaming Build](#)

RattatakeMeAway - March 7, 2017, 2:55 pm

So, I plan on getting a custom gaming PC built for me. I'm going through NCIX, because they're a Canadian company and they offer financing as well (which will help me out).

I'll mostly be using the computer for everyday kinda things, though I do want the option to play graphic intensive games should I decide to. I mostly play Runescape and League as it is right now.

So this is the build I've put together, I'm wondering if you guys can give some insight on my build and if you have any suggestions or changes that I should make before I go through with this.

Build:

Computer Cases Corsair Carbide Clear 600C Full Tower Case Window ATX 2X5.25" 2X3.5" 3X2.5" USB3.0X2 /2.0X2 - Black 1 \$202.94

CPUs / Processors INTEL® CORE™ I7-7700K Processor 8M Cache 4 Cores 4.2GHZ Up to 4.5GHZ FC-LGA14C Retail Box Kaby Lake
Does not include fan in the box. 1 \$470.77

CPU Heatsinks Corsair Cooling Hydro Series H100i V2 CPU Cooler System
LGA1151/1150/1155/1156/AM2/AM3/FM1/FM2 1 \$160.22

Motherboards ASUS ROG Maximus IX Hero LGA1151 Kaby Lake DDR4 DP HDMI M.2 USB 3.1 Z270 Aura Sync ATX Motherboard 1 \$312.72

Components aren't bad but why not build it yourself?

Also no mass storage? (HDD)

I just don't have the patience for that. I'd rather just pay extra to have it done for me. And ah! I knew I was missing something.
