Thread: [How to get Local IP and MAC address ?](#)

Hackoo - March 8, 2017, 10:23 am

Hi ?
I want to share with you what i have tested on my PC with Windows 7 32 bits (French Machine) and of course i wonder if this same script will work or not on other machines (English, German and so on)

Here is the script :

Get_IP_MAC.bat

Spoiler ([Click to View](#))PHP Code

```
<?php
@echo off
Title Get IP and MAC Address
@for /f "delims=[] tokens=2" %%a in ('ping -4 -n 1 %ComputerName% ^| findstr [') do (
    set "MY_IP=%%a"
)

@For /f %%a in ('getmac /NH /FO Table') do (
    @For /f %%b in ('echo %%a') do (
        If /I NOT "%%b"=="N/A" (
            Set "MY_MAC=%%b"
        )
    )
)
echo Network IP : %MY_IP%
echo MAC Address : %MY_MAC%
pause>nul
```

So, i'm waiting for your testing and your feed back ?
Thank you ?

It works but you have a typo in the ping command. Should be ping -4

motherfawker666 - March 8, 2017, 5:30 pm

Too few people (myself included) take advantage of the usefulness of FOR statements. Error catching would be a solid idea.

Should be ping -4Thank you for the remark !
Yes i edit my post and i correct it ?

Sorry do you mean public IP address or ipv4? Can't you just use ipconfig and findstr?

Can't you just use ipconfig and findstr?

Yes ipconfig is the proper way of doing this. I didn't look at the values before, but you're showing me the wrong IP address and MAC. ipconfig /all will take a little work to pull the correct IP. In my case, I have a virtualBox Host-Only adapter and a Local Area Connection both with different IP addresses. I also have 5 additional interfaces with ipv6 for VPN.
