Thread: [Are you color blind? | Test in thread](#)

Leroy Jethro Gibbs - March 8, 2017, 6:17 pm

I'm curious who all here is some form of color blind. I'm not according to this test. Who is? Post a screenshot of the results below!

<http://enchroma.com/test/#&ui-state=dialog> <----- Color Blind Test

Enzio - March 8, 2017, 6:25 pm

I'm blind so it's hard to know if I am color blind or not. Any other similar tests?

SparkMasterTape - March 8, 2017, 6:26 pm

boi i can see my colors fine
thank u very much

Leroy Jethro Gibbs - March 8, 2017, 6:29 pm

Fucking trolls. Go blind yourself. >:(

Spoiler [\(Click to View\)](#) Kidding. This is HF. What the fuck am I suppose to expect Imfao. Good to see you sluts aren't too blind to reply.

Gangin' - March 8, 2017, 6:33 pm

10% of guys have some instance of color-blindness

Only 0.1% in women

This is because the imperfection lies in your X chromosome. Since women have 2 X chromosomes, they have a much higher chance of having the dominant X chromosome, which contains no genes of color blindness.

I, myself, am Red-Green color blind, diagnosed by an Eye Doctor, so I pretty much don't have perception of red colors, and all red light gets filtered through other rods/cones (Can never remember which perceives color) and the red light is made to look like a simulated red, which can be a lot more brown/green/grayish than normal.

My dad has a rare case of color blindness, the only color he can see correctly is Yellow. Everything else is fucked up.

My uncle has the same color blindness as me. Must be the gene is strong in my family.

What I hate most about color blindness is when people say something along the lines of "Oh, you're really color blind? What color shirt am I wearing? What's this color? That one?" and if I guess/see them correctly I always get the "Oh come on you're not really color blind, stop lying"

How about you guys?

Unintentional - March 8, 2017, 6:34 pm

I have a normal color vision. I am now assured that I have normal color vision.

Mom - March 8, 2017, 6:36 pm

Normal Color Vision for me, however some of the problems in that test were a bit hard for me to figure out. But I obviously knew that I am not color blinded, but I am just a bit blind, I do wear glasses.

~Jay~ - March 8, 2017, 11:23 pm

I TA'ed for an intro psychology class and it was always hilarious seeing a handful of student realize they were colorblind for the first time.

test - March 8, 2017, 11:26 pm

Normal Color Vision. I struggled seeing like one or two of them though.

SIM-2223238 - March 8, 2017, 11:29 pm

uhuh

how the fuck

Now this is some high quality bait. bait this good only comes around once every thousand years. Proud of you.

ASAC Schrader - March 8, 2017, 11:37 pm

Dont know why I did the test but I have normal vision.

Money- - March 8, 2017, 11:37 pm

I got normal , is there any results beyond normal haha?

~Jay~ - March 8, 2017, 11:39 pm

(Mar 9, 2017 12:37 AM)Money- Wrote: [\[CITE\]](#) I got normal , is there any results beyond normal haha?

Technically yes, but I doubt that whoever made this test has advanced enough color vision to make an outcome to account for that. Only a handful of people would be able to score well above average.

grady - March 8, 2017, 11:41 pm

(Mar 9, 2017 12:29 AM)Aggron Wrote: [\[CITE\]](#)

hello that would be a 5

Ninja - March 9, 2017, 12:05 am

I scored a normal colour vision score and most were very easy to see.

630 - March 9, 2017, 1:47 am

"Normal Color Vision"

There were 1-2 that made me go uhhhh what the fuck. One was the really colorful one and the other was a gray one. Not sure if they were throwing that in there to fuck with me or not.

Daddy???????????? - March 9, 2017, 1:51 am

Yeah Normal Color Vision as well, but yeah 2 of them seemed blank and I sat there for a good few seconds like fuck I am colorblind LOL but guess they just were blank.

b?xxy - March 9, 2017, 1:52 am

Well, I mean these are always fun even though I never had a doubt in my head that I was color blind.

Also, I do have a headache now.

Quote:You were able to see the hidden shape in all or nearly all of the test conditions. This indicates a high probability of having normal color vision.

LeonBackward - March 9, 2017, 2:13 am

Interesting test.

My result was Normal Color Vision.

Anubis - March 9, 2017, 3:03 am

You were able to see the hidden shape in all or nearly all of the test conditions.

This indicates a high probability of having normal color vision.

When people with normal color vision wear Enchroma glasses, they see a "color boost" effect: colors appear to "pop" with a superordinary vibrance.

This effect, called chromatic contrast enhancement, is how our glasses also help people with color blindness.

?I???po?N? - March 9, 2017, 3:06 am

Normal color vision, a couple of them were really hard to see tho.

Had to move away a bit from the monitor and look at it from different directions :')

NurSpec - March 9, 2017, 3:13 am

Normal vision, but damn.. some of those made me second guess myself.

Phil - March 9, 2017, 3:18 am

Normal vision, had issue with one or two but that was all.

Spoiler ([Click to View](#))

SIM-2362145 - March 9, 2017, 4:01 am

No. I am not color blind.

Larceny - March 9, 2017, 5:45 am

I went to highschool biology too.

C o m p l e x - March 9, 2017, 5:51 am

it said my vision was normal lets go

lilo - March 9, 2017, 5:57 am

Sadly i got Tritanopia ,i think its because of my tv colors setting or brightness!

Thanks Boss for this fun test.

Edit :After setting my tv better i got Normal Color Vision .

i see i 7 lmfaio my eyes might be fucked

Sir - March 9, 2017, 6:07 am

I feel like this has been shared like 100 times at this point xD
Normal vision here though ?

Magna imperium - March 9, 2017, 6:13 am

Please read the instructions and try again. If you get this error again, you may have a color deficiency that is too strong to be measured using this app.
wtf

Dowls - March 9, 2017, 6:16 am

Done this before, got normal. Done it again got normal.
Still get worried when I get the ones with nothing on it.

@Jupiter - March 9, 2017, 6:19 am

ok :(

Social Engineer - March 9, 2017, 6:20 am

It's save to say I'm not. Was interesting though, thanks.

Davian - March 9, 2017, 6:31 am

Normal Color Vision
yay (:

bxnnie - March 9, 2017, 6:35 am

Deutan ez :/
always knew im kinda colorblind tho

Silent Militant - March 9, 2017, 6:46 am

Mild Protan :/ Welp shit hahaha

Leroy Jethro Gibbs - March 9, 2017, 7:20 am

Damn. Go get your eyes checked man.

Prepper - March 9, 2017, 10:51 am

Normal Color Vision

You were able to see the hidden shape in all or nearly all of the test conditions. This indicates a high probability of having normal color vision.

When people with normal color vision wear Enchroma glasses, they see a “color boost” effect: colors appear to “pop” with a superordinary vibrance. This effect, called chromatic contrast enhancement, is how our glasses also help people with color blindness.

Addition:

There was some that looked like they had something but I couldn't figure it out so I clicked the nothing button.

Bluffer - March 9, 2017, 10:55 am

Surprisingly I'm good.

Normal Color Vision

Maybe talk to your eye doctor about those enchroma glasses, I personally want to see what it is like because they said it makes colors pop for normal vision people.

? **[\$(1000)\$] ?** - March 9, 2017, 11:07 am

Im color blind, but I knew that since I was a young. I would love to get a paid of those glasses, but they are NOT cheap!

Gustav. - March 9, 2017, 11:09 am

"Protan-type color vision deficiency is a type of red-green color blindness where the red cones in the eye do not detect enough red light, but instead respond more to green light."

Thought I got all of them right, but they hit me with that bullshit.

Cultivation - March 9, 2017, 11:10 am

Normal Color Vision

You were able to see the hidden shape in all or nearly all of the test conditions. This indicates a high probability of having normal color vision.

It honestly doesn't bother me so I doubt I'll bother with the glasses because they are very expensive.

Kayoz - March 9, 2017, 11:35 am

Already know that I'm a mild deutan for like 4 years. Me and my mates were studying biology and came across a colorblind test in the book that said "colorblind people cannot see the number in this picture" and I was like "What number?" lmao.

Pretty funny.

Will never buy these shitty ass glasses though. I can live my life perfectly fine without them.

Movements - March 9, 2017, 11:36 am

I have normal colour vision. 2 of them like were blank, and i was like what am i colour blind xd
