XSTRIKE

XSTRIKE is our external aim assistance cheat designed for the hardcore league player who needs the highest tier of security on all services that they play on. It has the most advanced kernel level protection methods currently in use by a Pay2Cheat making detection vastly more difficult than any cheat of it's kind and bypasses literally 99.9% of all existing client-side anti-cheat with near perfection.

Faceit is already bypassed by some coders, Thing is most of them will be Private cheats. You can't bypass Faceit in usermode.

LordTristan - May 5, 2017, 4:48 am

So I figure I'll talk about what's going on with the FACEIT update because a lot of people are asking about the FACEIT Client support that I said I was working on.

Two months back I began working on proper and full VAD unlinking, this would hide the LM hack's memory, if done correctly, even from an anti-cheat like ESEA.

Sadly, despite getting proper and full VAD unlinking working on all versions of Windows without any issues with PatchGuard or any blue screen issues in general the LM modules couldn't be stabilized once unlinked, the process they were hiding in would crash constantly and it was just too unstable and so I was forced to go back to the drawing board and find better solutions and I have found alternative solutions so the answer is that I'm still working on support for the FACEIT Client among other third party anti-cheat that operate at the kernel level.

I want to give a fair warning though to people thinking of buying a cheat from other providers that claim they have cheats undetected on FACEIT Client. There's a very big difference between a cheat working on the FACEIT Client and being undetected on the FACEIT Client. So be wary of other providers claiming they support the FACEIT Client because it is extremely easy to get a cheat working on FACEIT Client but it is not at all easy to get a cheat undetected.

.. And when I say undetected I mean not detectable by current implementation of the anti-cheat and not "nobody has been banned yet so everything is fine" because that's a STUPID way to think and it's eventually going to cost your customers their accounts.

The difference between Jimster and fake EnhancedAim is that LordTristan is reputable/reliable.

Why the hell are you even talking shit? You used to lie about using Vuno's cheat on ESEA when his forums was full of customers getting banned by FaceIT server-sided cheat. Hell, the cheat even at some point caused untrusted when Vuno updated his aimbot to "work on FaceIT serversided better."

Cheats get detected. If you believe any different, you're an idiot. Bringing up a detection on one of the strongest anticheats is a pretty stupid thing. The only thing that matters is that it WAS undetected. However, Vuno's cheat was never undetected or actually even a thing.

Jimster isn't currently selling a FACEIT Client cheat but he was selling one for GamersClub, however within a month GC had broken his bypass or detected the cheat... I don't know which, I can't see the Premium area of his forums anymore I just know his GC support is "under maintenance" after less than a month of going public.

Sorry that you are not pleased with our service.

As for the refund, you had oracle which only supports Faceit serverside, which we have no reports of detection on.

When you try to PM Tristan it will say that you can't because you are blocked, you are supposed to use the forum unless it's something that cannot be resolved there or by me.

The "white knighting" happened because of the message above the shoutbox, they didn't want you to get banned from posting in it.

And in what ways do we not keep up with others? We appreciate any and all feedback?

Did he get a permanent ban or just temporarily ban? if Temp ban how long is it?

It was like a 2 day ban or something like that. He should be unbanned now.

LordTristan - January 19, 2018, 9:10 am

I wasn't banned for reputation abuse, I was banned for reporting reputation abuse because it wasn't in the list of the seven things considered reputation abuse under HF rules.

I couldn't keep them closed, had a bunch of bills to pay so they're reopened. Still working on version 2.0 of XSTRIKE and the release of OSPREY in the meantime.

We're planning on releasing something for Rainbow Six Siege in the future, but for the time being yes, only CS.

Yeah, I had the feeling by the menu/visuals. Tristan what made you go internal after all these years being external? (Correct me if I am wrong about your cheats being externals)

ORACLE is being replaced by the internal cheat because it's sales are shit compared to XSTRIKE and I'm, as of late 2018, confident I can secure a internal cheat against VAC enough to satisfy me which I couldn't do before.
