Thread: [GTX 1080Ti our first 4K single card solution!](#)

Gt403cyl - March 9, 2017, 9:48 am

In the early releases of benchmarks it looks like we finally have our first single GPU solution for 4K @60 fps.

[Video: https://www.youtube.com/watch?v=lxX1_mmmQAA]

At MSRP of \$699 USD, what are your thoughts!

You Just Got Sarged - March 9, 2017, 9:50 am

I beat you to it by a few seconds:

You don't count!

?????

SIM-2223238 - March 9, 2017, 10:24 am

Fucking sexy, I'd sell my left bollock for this piece of art.

?????

I never heard that from one of my admirers before. ?

I'll edit my thread for just the ryzen topic since we both posted it seconds apart.

Gt403cyl - March 9, 2017, 10:56 am

(Mar 9, 2017 11:24 AM)Aggron Wrote: [\[CITE\]](#) Fucking sexy, I'd sell my left bollock for this piece of art.

Rather than by a new GPU for my son I think I'll give him my current 980Ti and get a 1080Ti for myself, just got to wait till they are available....

Another \$1k spoken for I guess.

You know I was joking.

Well that's fine as it's 2 separate topics anyways!

shreder - March 9, 2017, 11:01 am

Isn't the first always bad though? Imagine the first card to run 1080p at 60fps i bet that didn't last

long.

If it was the first to be able to handle 4K at any fps i'd agree, but they've been at it to get 4K available the same way 1080p is. This card should be great.

Gt403cyl - March 9, 2017, 11:05 am

(Mar 9, 2017 12:01 PM)shreder Wrote: [\[CITE\]](#) Isn't the first always bad though? Imagine the first card to run 1080p at 60fps i bet that didn't last long.

Well it's technically not the first, lots of cards can run 4k, hell even the iGPU on Intel's CPU's can run it, but this is the first to be able to put out 60 FPS fairly consistently....

The 1080 only could do 45 FPS consistently in 4K..., you have to SLi 1080's to get 70ish FPS.

iNk. - March 9, 2017, 11:07 am

I just got a 1070 smh

Fuck I should've waited

GewooE - March 9, 2017, 11:08 am

I don't think it is the first, couldn't the titan x ran 4k @60fps. Anyway this card promises a lot I would love to get it if I had the money for it!

Gt403cyl - March 9, 2017, 11:20 am

(Mar 9, 2017 12:08 PM)GewooE Wrote: [\[CITE\]](#) I don't think it is the first, couldn't the titan x ran 4k @60fps. Anyway this card promises a lot I would love to get it if I had the money for it!

The Titan XP could, but it's far too expensive @ \$1200-\$1300, it takes e-peen to a whole next level...

This is the first reasonably priced card to do it.

shreder - March 9, 2017, 11:21 am

but is 60fps really enough? Idk but 60fps is choppy for me now.

webdev77 - March 9, 2017, 12:14 pm

(Mar 9, 2017 12:21 PM)shreder Wrote: [\[CITE\]](#) but is 60fps really enough? Idk but 60fps is choppy for me now.

Considering many consoles are still locked to 30fps at 1080p, clearly it's enough for many people to play games.

60fps is sufficient for game playing. Ideally I'd like twice my monitor's refresh rate in terms of FPS, but that's not needed to have a good time.

monster the god - March 9, 2017, 12:15 pm

Who wants to play at 60 fps though lmao

Gt403cyl - March 9, 2017, 1:21 pm

(Mar 9, 2017 12:21 PM)shreder Wrote: [\[CITE\]](#) but is 60fps really enough? Idk but 60fps is choppy for me now.

(Mar 9, 2017 01:15 PM)monster the god Wrote: [\[CITE\]](#) Who wants to play at 60 fps though lmao 60FPS @ 4k resolution is not the same as 60FPS @ 1080p.....

That said I still personally believe that 1440p is ideal for gaming and the 1080Ti does extremely well at 1440p so yeah not sure what else to say about that.

St0rm - March 9, 2017, 10:00 pm

It looks damn impressive

Still not blowing another 700\$ on a GPU, though. I'm happy with my 980Ti. Maybe next time.

Gt403cyl - March 9, 2017, 10:17 pm

(Mar 9, 2017 11:00 PM)St0rm Wrote: [\[CITE\]](#) It looks damn impressive

At least he will know he can OC the 980Ti to 1500MHz!, (1467MHz stable for most gaming over a few hours...)

Cant Stump the Trump - March 9, 2017, 10:50 pm

60hz 4k is a meme. 144hz 1440p IPS panel master race.

cryostat - March 9, 2017, 10:54 pm

(Mar 9, 2017 12:07 PM)iNk. Wrote: [\[CITE\]](#) I just got a 1070 smh

Fuck I should've waited

The 1080ti is going to be \$500 more than a 1070, unless you wanted to invest the price of two 1070s you're fine.

shreder - March 9, 2017, 11:56 pm

Well the prices might drop a bit more even I doubt it 1070 is already at a stable and cheap price. maybe inn a few more months it should drop a good amount inn retail stores.

Pr0t0c0l - March 10, 2017, 6:28 am

Wish I had the 1080, looks so powerful!

ghost_486 - March 10, 2017, 7:45 am

Whatever today's \$1000 card is tomorrows \$50 card on Craigslist, i can wait.

For what that thing costs i can build a hole computer from scratch and game in just about anything i want with decent fps as long as the res and graphic settings aren't set to spoiled brat twit mode in a AAA game that just came out.

Denitorious - March 10, 2017, 8:18 am

You can say that for every single tech product. Everything will once not be worth much anymore, including this card and every single one released after it.

What you just said also contradicts what this card is for..if you want 1080p gaming you wouldn't even need this card. As the title says: 4K single card solution.. not "decent fps as long as the res and graphics setting aren't set to spoiled brat".

Yeah. As long as I'm still at the 60-100 fps standard on my games I see no reason to upgrade soon. And so far my 980Ti pushes those frames out without the overclock so...

My wallet can only fear the Nintendo Switch and a PS4 for now :D
Funny how two consoles make up the price of the GPU :l

Denitorious - March 10, 2017, 8:20 am

Do not, I repeat, do not get the piece of crap the current switch is. 3 of my close friends did and the all have issues with theirs. First version of it seems unstable as fuck.

Yeah, BF1 I get 90-100fps on ultra with stock clocks, OC'ed to 1467MHz I get 105-115 fps... most other games are about the same so I'm good with that.

(Mar 10, 2017 09:25 AM)Aggron Wrote: [\[CITE\]](#) Can you adopt me please, I need that 980 ti. No sorry I can't afford any more kids!!

Ya i know, just the more you spend the more you lose over time when it comes to pc parts so that's all i was trying to point out and i just don't see the point of going all in, guess if i had cash coming out of everywhere i wouldn't care but i'm not a rich man so iv all ways lived off older used hardware for most of my life and i like the good stuff and wait for it to get old and cheap then suck it up from somewhere for free, my self i don't have the cash to go out and spend like \$1000 on a video card and in a way i just don't care even if i did.

1080p gaming ^^

Try playing the original half life or counter strike game at 400x300 res on a 3Dfx voodoo1 4meg ?

Then we can talk about 4k or whatever ?

2077 - March 11, 2017, 5:52 am

I guess this card would be overkill just to play 1080p games, was planning on getting one but costs 850\$

webdev77 - March 11, 2017, 8:41 am

I mostly agree with this statement, but super sampling would be pretty nice.
