Thread: [Electronic safe combination](#)

Francis Gallagher - March 9, 2017, 3:35 pm

Not sure if this belongs here or anywhere on hackforums.. I have forgotten the combination to my sentry safe. It's one of those electronic combination safes, with no secondary key override.

I've seen where you can use a magnet, but I don't have a magnet big enough. Nor do I have the funds to go buy one, until I get in the safe. Lmao.

Any help is appreciate. If not allowed here please move. Or remove if not allowed on hackfourms. Thanks in advance.

You might want to call a locksmith and let them do their magic. I have no idea now to get into a safe.

Rather not break it. I quite enjoy the safe. :(
I've thought of that.

I like to be self sufficient.

I'm sure you see the irony here right? You have an expectation that people would know weaknesses of that safe, yet you kept your valuables in it. ??? Well, unless it is not your safe.

Well, unless it is not your safe.

Not valuables in terms of money. But, important paper documents. I definitely do see the irony though. Lmao.
