Thread: [\[Required\] Cryter and RAT](#)

elli0t - March 9, 2017, 8:41 pm

Firstly I'm big noob so forgive me if I use wrong terms. I want a RAT and Crypter which goes along with each other. I have few requirements crypter should be FUD, executes payload at boot, should be persistent, extension spoofing.

Recommend me best one out there on hackforums. I'm confused between so many.

I am thinking about going for RATA Protector+His Private Stub.

EDIT: Almost forgot to mention that I don't want to do port forwarding. I want to run this over a VPS. I am thinking about generating a metasploit payload, crypting with crypter and "start listener over my VPS and get connections". The part marked within qoutes is what I have already done. Please recommend me if there is a better way

thomashacker - March 10, 2017, 2:50 am

ya..good you can go with any crypter except cyberseal ...i recommend u static crypter i am using it and its awesome...others are also good if u want strong persistance go for RATA...pls dont take cyberseal it is a shit crypter i had 6 months license and had ad experience with it...the coder is a faker...he fakes his videos it didn't gave me even 3/35 always more than 5/35..

Zexus99 - March 10, 2017, 1:10 pm

Take LuminosityLink and Rata Protector (with private stub if you want)

You will be okay with these ?

If I'm not mistaken private stub is same as a RAT client? So if I go for RATA Protector and Private Stub, I will not need to get LuminosityLink?

That's not what he meant... Private Stub is like having a private crypter.

James711 - March 11, 2017, 5:34 am

LuminosityLink & Flow Crypter

Zexus99 - March 11, 2017, 6:37 am

No, Rata Protector will help you to make your server from Luminosity fud, that's all (and with a private stub on Rata Protector the fud state stay for like 3 weeks, 1 month if it's not scanned on VT).

well Luminosity seemed like a good deal with such features great response on forum and with future updates

ONURIS - March 12, 2017, 12:44 am

Use IM3 I think it more stable than LL , about crypter I crypt my self and offer free crypting service also

For 1 year my crypted file is fud

If you want a RAT that can be setup on a VPS, I highly suggest taking a look into Orcus. You can deploy the server to run on a different computer than the administration. Also IM5 is pushing towards this now.

oh...u THINK THEY ARE CLEAN ..THEY MAY BE BACKDOORED OR ATLEAST U WILL NOT GET UPDATES

leoshyl0ck - March 13, 2017, 3:33 am

Am having problem with my Kazycrypter and it has been on update for days now. Anyone with valid information about it

There is high chance that the cracked ones are infected, not always!

Have a nice day buddy ?

leoshylock - March 13, 2017, 4:09 am

Can anyone help me with my problem, have crypt my virus and when i scanned my Detection Rate : 8/35.. Please i need help how many times do i need to do this before i get 0/35

elli0t - March 13, 2017, 4:21 am

which crypter are you using? I use RATA and I am getting great results most of the major av's don't detect

leoshylock - March 13, 2017, 4:25 am

Am using kazycrypter and have not been able to get good result because my detection is always 8/35

leoshylock - March 14, 2017, 1:55 pm

Is anyone here, i need help

I don't know much about Kazycrypter but using unique Assembly Information and HQ Icon did the trick for RATA Protector I am getting 0/38 using RATA with LuminosityLink
