Thread: [Best file encryption tool for native executable \(netwire\)](#)

**Mr Tokyo** - March 11, 2017, 4:28 pm

I've bought 4 of them and not a one work with NetWire or B\*\*\*

Looking for one that works well. Willing to pay for a single crypt if someone can.

Would really appreciate honesty.

**Sheeple** - March 11, 2017, 4:35 pm

When you buy 4 crypters without asking them if they support what you need, or if they can add support for it and it takes 4 tries before learning to ask

Reading through their sales threads, gave me zero doubt that they would work with my file.

**Codefuser** - March 11, 2017, 6:45 pm

I recommend Static Crypter for you, it works great with Netwire.

**NewFoundation** - March 12, 2017, 11:00 pm

Hmu if you need any help, i would not mind assisting!!! :P

Hi..I am here to reveal some real info about cyberseal and his fake bypass videos.Cyberseal won't worth what it is shown in its sales thread.I had 6 months license and in my period never got a crypted stub with less than 4-5/35 detections.It cannot bypass even MSE SOMETIMES.when i ask for reason he just says your icon is not good and assemblies are not proper bla bla...I recommend you to look at this thread... [/showthread.php?tid=5199646](#) . The results are 100% REAL but cyberseal rejected them showing fake results.I asked him to show a vid by creating a stub from any of RAT and crypt it in real time ..but he insisted saying it takes soo much of time..Then i got to know this guy is cheating all with his stupid crypter in marketplace..I think he adds some junk code to notepad and change its extension to EXE and then scans it to show it is FUD. .I recommend everybody to ask cyberseal of latest result of scantime before buying even for 1 month ..don't waste your money on this shit...I told this truth to some people who are looking to buy a crypter so my last account is terminated.I can open hundreds of accounts and can tell this truth hundreds of time.Its price must be like 4\$/month and 5\$/6 months and 11\$/lifetime.

### Major CONS:

This is bullshit..total cypter is a shit but i agree some will work if u are lucky.

- 1.You hardly get updates for 2 months once.
- 2.Most of features wont work or buggy.(fake error mssg always appears if enabled).
- 3.No UAC bypass while most of crypters on HF have it .
- 4.Biding file is a shit ..
- 5.AV scanner wont work at all..
- 6.No random Assembly option which is pain in ass...while most of crypters have it.
- 7.Extension Changer is awkward...You can't change name of file as you want...

And LOT MORE...Confused

I hope everybody will consider these and save their money from this scam..

I want to challenge cyberseal do a video with his crypter from creating stub from a legit RAT(LL,NANOCORE,ORCUS,IM5)(not with txt) and scan it and bypass ESET atleast once..I know you cant because it cant bypass.

I don't say not to buy cyberseal as it all depends on your choice but atleast dont waste money on shit crypters like these...Go for good crypters which give weekly updates and good persistence.

I lost 55\$ on this shit ...so be a looser like me...go for good crypters like(RATA PROTECTOR,TOPHER,STATIC CRYPTER,KAZY,exterbyte)...

Thank you. :Spread my mssg..

I have also created a thread but it was removed within hours by cyberseal..No body can stop the truth...
