Received my vouch copy, and I am very impressed by this e-book!

I'm a bit new to ratting so easy to follow guides are very pleasing to me, and this certainly was a very easy to follow guide. Not only was it easy to follow, but the methods themselves were very detailed. The guide explained the methods step-by-step in detail and had some great methods! There is no investment required and as long as you already have your RAT/botnet set up, you can immediately start following it! There were so many methods with the bonus package included and it covers targeted spreading as well as mass spreading. The book is well written grammar-wise and is packed with information. There are almost 20 pages full of great methods and overall I would definitely recommend this. The price is very fair in my opinion, and you can easily make your money back after a few hours of spreading. I've already got 21 connections withing 20 mins of receiving it.

Vouch for dux0r and his great product!

Received a vouch copy my review on this e-book is it works. One of the hardest things for newbies in the Rat scene is to spread. For all you people out there who are having troubles this ebook covers a variety of methods which if you put the effort in can get you installs. Note, these methods require work so if you're lazy and want auto pilot loads then I suggest you invest 800\$ a week into a EK and learn that trait. If you're willing to put in the work read the e-book thoroughly then these methods will get you what you need. These methods require no investments over then the standard software/crypter which is standard so it's good for people who just want to start out and don't have massive budgets. Thanks for the vouch copy OP good luck.
