Thread: [Need trick or script to auto click on a button on a webpage](#)

shyamsss - March 12, 2017, 9:06 pm

i want to auto click on a button on a webpage

like amazon lightning deals when live, i want it will automatic added to cart by auto click trick or script

when amazon lightning deals live it shows - Add to cart button

No one's going to code it for you, but take a look into Selenium or JUnit. Good luck if you're going to code it yourself.

kamika\$e - March 14, 2017, 8:04 pm

it'll be quite easy if you use the selenium web driver framework. the documentation of selenium ([found here](#)),

Does this have to be written in Java? Because you could use other languages, for example Python, to solve this problem.

Yeah, he might want to implement this in something bigger. But even then you could use Python for it.

Anyway, If you want to do it with Java: do as said above. Selenium will do the trick.

If you want to use another language like Python, you can send me a PM and I will help you with it.
