Thread: [White loading symbol with blackscreen](#)

Senor Suave - March 12, 2017, 9:32 pm

So, there was two sub forums and I choose this one. Sorry, if I put it in the wrong section. Anyway, I screwed up. I was running on hard drive C with Windows 10, my mouse was being stupid and I needed my other hard drive (D). So I pulled out hard drive D when HD C was still running. Then I did a hard reset. This screwed everything up. Now when I boot, it's a black screen with a white loading screen. I didn't update my PC and I can't use ctrl+alt+ delete or boot into Windows start up repair. Any tips?

1. Why did you pull out a drive while the PC was running
2. Have you put the drive back in and tried?
3. Can you provide an image of the white loading screen?
4. Just to make sure, you are actually on Windows 10?
5. Can you access your BIOS?

1. It was in the process of shutting down

2. Yes I have, I get the loading screen

3. I'm on mobile so I can't link it. Sorry.

4. Yes, it's Windows 10

5. Yes I can

4. Yes, it's Windows 10

5. Yes I can

1. Make sure your C drive is visible in the BIOS

2. Might simply be some corrupted files, I would recommend you create a bootable Windows 10 media on another PC, boot to it and select to repair your installation.

Very weird op.. I hope you get this solved!

Senor Suave - *March 15, 2017, 1:01 pm*

I ended up saying fuck the data and I used my cloned hard drive. Thanks for all the help guys.
