Thread: [Crypter that keeps original exe functionality?](#)

arimaru - March 13, 2017, 3:40 pm

Looking to crypt a file but keep its original functions preferably stub less as I dont want it FUD

It's for personal use not infecting someone.

As I feel I should add extra info, It's a game hack that i'm looking to use on a private server but the hack detection they have picks it up, I used a crypter in the past and managed to get around the detection but I forgot which crypter I used.

looking to crypt ONLY the .exe

I'd say as a whole i'm just basically looking for something that jumbles the programs code? I guess, Not too sure specifically how crypters work but a crypter that doesnt use a stub would probably work

Pr0t0c0l - March 13, 2017, 3:54 pm

Check the market for good crypters.

ONURIS - March 13, 2017, 4:57 pm

If the file is .net I can help

arimaru - March 13, 2017, 4:58 pm

Not quite sure what the file itself is
but with the way the UI looks it might be

teevo41 - March 13, 2017, 8:42 pm

I would think that the majority of the crypters will crypt it just fine.

Look around for some free ones. Google. Just make sure you sandbox everything you download first.

What the fuck did you just say.

hurac3n - March 13, 2017, 8:43 pm

Maybe you should test free crypting services, if they work you won't loose your money ;)

arimaru - March 13, 2017, 9:08 pm

I tried using Aegis Crypter but the file itself woudnt run after. tried around 8 other free crypters without any results aswell. I used one in the past but cannot remember the name.

Codefuser - March 14, 2017, 3:37 am

Crypters aren't for this. Get VMProtect and Themida, they are in the Hacking Team dump OR use Safengine free version.

arimaru - March 14, 2017, 12:41 pm

I think SafeEngine is exactly what I need. Thank you Codefuser.

ps.fordham - March 14, 2017, 2:47 pm

try dataprotector or flowcrypter

Thanks a lot... I had the same problem, i've probably tried everyone crypter and none of them worked. VMProtect works perfectly with apps.
