Thread: [Remote Shell has been uploaded, but can't run \(403 Forbidden\)](#)

SIM-3498275 - March 13, 2017, 4:02 pm

Through password cracking, I got this website admin user/password. I have uploaded remote shell by using upload file in Posting a new thread feature.

However, under mod_security and/or .htaccess file, the shells could not be run. It shows 403 Forbidden when I try to access the shells.

What I have tried:

1/ Uploaded shell

2/ Uploaded modified .htaccess

.....

so much more, but still could not get it worked.

May you want to take a look at it? Would you have any ideas about getting shell run on it?

Thank you!

I'd say its the permissions of the shell file on the server. You need to change it to allow public view I believe.

Thank you for your reply. However, I don't think I can get to the upper folder on the website. I can't also change folder permission.

The only thing I am able to do on this website is uploading shell files.
