Thread: [Tutorial: Hide your own folders with a password](#)

Mr.Magnificent - March 15, 2017, 1:29 am

Good morning HF users !

I came across a little batch code while I tried to lock some folders with a password.

Alot of websites advice to use software to lock a folder but this is difficult and annoying for some. Therefore I would like to share this with you.

I also included a bat to exe converter to cover up the code so no one can easily read your pw.

Just to be clear: I put the files together and wrote the readme, the code isn't in anyway written by me.

I hope it helps someone out !

Virustotal scan:
