Lol, you caught on. Here's how to do "hack" it. Since JavaScript is client-side that means the data is literally stored on your computer. Go into console on Google Chrome ("F12"), go back to the loading screen of the game (without exiting the console), start a new game, then click back to the console immediately. This will pause the game and allow you to edit the data. In the console type Code `this.game.data.steps = <NUMBER>;` Then you die and that's your new score.

I saw that you had "sorry for free hosting" on your site.

You can disable the SPAM logo at the bottom like this:

- >Manage website
- >Settings
- >General scroll down
- >Turn "Show Banner" off

That should make the site a bit more professional seeming :P

Add me to leaderboard pls:
