Thread: [How to pass value from form2 to form3 in vb.net](#)

adenfr - March 20, 2017, 5:08 am

hello there im making a programme that generate sqlserver code to use it in my vb.net progarme

i have first form conatain the connection like you see in picture below

the connection is works 100%

but in second form i have 2 datagridview

1- for tables

2- for fields

so when i click in any table of data gridview1 => datagridview2 show it fields

but when i clike on datagridview1 to get the value of combobox form form1 to use it in form2 i have error

<https://imgur.com/a/TYjMq>

Failed to connect to server.

my script

```
Dim frm As New Form2
```

```
prd.ServerConnection = New ServerConnection(frm.ComboServer.Text) ' here the error
```

```
prd.DGVField(MetroGridTables, MetroGridField)
```

so i use form1 to making connection and form2 to make operation but i have
Failed in connection to server.

(Mar 20, 2017 07:56 AM)Visual Freedom Wrote: [CITE](#) You can use a module for shared objects.

^^This is the best way to do it.

I believe you can also do it by passing it through a public method, but I would recommend you avoid doing that.

how that !!!! can you explain

Ninja - March 20, 2017, 11:03 am

Pass the the values as parameters in the constructor of the other form. If that doesn't fit your needs then use a shared module or even the Settings class (or whatever its called).
