Thread: [SMTP BRUTER - C++ - EXTREME PERFORMANCE - HIGH STABILITY - EXCLUSIVE - 3 COPIES ONLY](#)

maldev0 - March 21, 2017, 3:02 am

Hello folks,

I am proud to announce a brand new product I have been working on for a while.

This SMTP Bruter has an extreme high performance and stability. For now, it's only able to scan and brute SMTPs without SSL/TLS, but this will change very soon. I am currently developing a fully working SSL/TLS support to engage all possible protocols. The bruter is for windows operating systems only.

Current Version: v1.2

The package includes: A seperate Scanner

The Bruter itself

Technical details (Scanner): Uses a manually imported domain list

Tries to find the smtp servers related to the domains

Scans domains for open ports

Solves splitting/algorithm problems on it's own

Smart multi threading

Automated multi threading (based on cores)

Very fast and stable

Unlimited lifetime upon execution

Hits will be exported in the end in a text file

64 Bit only

Can solve a list with 2k entries in ~66 seconds

The domain list can be as huge as you want. Tested with 750k entries.

Technical details (Bruter): Uses the exported smtp list from scanner

Brutes SMTPs precisely

Parses SMTP reply codes perfectly and handles them

Smart multi threading

Automated multi threading

Very fast and stable

Unlimited lifetime upon execution

Hits will be exported in a text file in realtime

64 Bit only

The smtp list can be as huge as you want aswell.

Compatibility: Windows XP Professional x64

Windows Vista x64

Windows 7 x64

Windows 8/8.1 x64

Windows 10 x64

Windows Server 2003/2008/2012/2016 x64

For optimal power and efficiency, use this software on machines with at least 8 Cores and 8 GB RAM.

Video:

[Video: <https://www.youtube.com/watch?v=7hvVanDKdC8>]

Info: The video is showing the v1.1 version. The version sold here (v1.2) is obviously in english has a different name.

Works perfectly on windows servers aswell.

Price:First Copy [\$600]

Second Copy [\$669]

Third Copy [\$749]

Copies left: 3

Bug fixes are free. I will setup this bruter via teamviewer personally and I also offer a free support anytime you want.

Customers will stay anonymous.

Important note: As I already mentioned, the new version (v2.0) with SSL/TLS support is under development and will finish soon. The new version will be distributed and sold on many forums and the price will be much more expensive. The new version (v2.0) will also include a monthly fee. If you purchase the current version (v1.2) then you will be able to get the upgraded version for only 200\$ and additionally you will not pay monthly fees. This chance is only valid for those who buy the first three copies here.

Interested? PM me.

Terms of Service: This product has been developed for testing purposes only. I am not responsible for any damages made by customers.

I can change the Terms of Service anytime I want

All sales are final. No refunds.

You are not allowed to use this software in an illegal way

This software has been developed for pentesting purposes only

You agree with the Terms of Service by purchasing the software

Vouch

Saw the software in action and i can guarantee you that it's accurate and fast.

Codefuser - March 21, 2017, 4:18 am

Vouch

OP is a good RE and coder.

ReduxJS - March 21, 2017, 11:56 am

Lol. So much for something that only cracks. Mail.crack is like \$30 but you want \$600? Lol should really adjust your crazy prices. Mail.crack does the same exact thing and even has a UI for it.
