Thread: [Windows Defender i did some checks but 0 success](#)

Juicers27 - March 21, 2017, 7:35 am

Hello everyone, i tired around 10 crypters so thats not crypter problem.. tired 10 different rats.. everything getting found after 1 success launch seems like Windows defender send your file to realtime checks.. once its done next time your trying to run that exe it will detection your file.. also tired to disable and removing windows defender, still the same thing, is anyone here have better idea to bypass this shit?

Doesn't mean they aren't the problem. Windows Defender collects samples and sends them for analysis by default.

Juicers27 - March 21, 2017, 7:40 am

so what should I do to bypass that shitty :?

Are you using FREE or PAID crypters?

If you're using a free crypter probably isn't FUD (Fully UnDetected) because lot of people have access to it and may upload to sharing Virus Scan sites...

If you're using a Paid crypter that claims to be FUD and it isn't... Contact with the service/product provider and ask for a refund or to fix that no-FUD problem.

Juicers27 - March 21, 2017, 7:41 am

maybe if i will disable networking for 1 minute, or something? they can still pick samples ?

You can't reasonably prevent this from happening unless you completely disable Windows Defender and Windows Updates.
