Thread: [Windows 10 won't boot. \[ESEADriver2.sys\]](#)

SIM-3341619 - March 23, 2017, 8:47 am

So my pc restarted was booting when I tried to open it last night.

It's a windows 10. It stopped and brought up a blue screen with error being ESEADriver2.sys not allowing the system to launch. This is presumably from the ESEA Client for CS:GO.

Anyhow I tried all these different things, CMD, restoring to 10 days ago before ESEA was downloaded, deleting and keeping personal files.

Also finally my big mistake deleting everything including personal files - the problem is I had a bunch of client work on the computer, so I screwed myself. If there is anyway to salvage and save the files and fix the computer or just fix the computer I would appreciate the help. I have tried as much as I can to fix it.

Thanks,

if you reinstalled windows then the chances to recover your files are low

I didn't reinstall it had like a solution page you know when your windows won't launch and I clicked remove all files and start windows as new or some shit.

Then your files are gone....it said it was going to remove all files. You could have also gotten a windows 10 install disk and ran recovery on your computer instead of formatting.

You were also using the built in image. If you had another source to run from, you could have tried other options. Either way, your files are gone. Sorry mate.
