Thread: [Useless typing test bot](#)

Ensky - March 23, 2017, 1:27 pm

Someone challenged me to a typing test, so I threw this shitty bot together in about ten minutes.

(runs faster than a Java version for some reason)

PHP Code

```
<?php
from selenium import webdriver
import time

class Typer:

    wordsList = []

    def __init__(self, url:str):
        self.url = url
        self.driver = webdriver.Chrome()
        self.driver.get(url)

        self.setWords()

    def setWords(self):
        """ Scrapes the words on the page so they are in an array to speed things up. """
        all_words = self.driver.find_elements_by_xpath('//*[@id="words"]/span')
        for word in all_words:
            self.wordsList.append(word.get_attribute('innerHTML'))

    def run(self):
        """ Runs the program """
        input = self.driver.find_element_by_id('input')
        for w in self.wordsList:
            input.send_keys(w + " ")

typer = Typer('http://typing-speed-test.aoeu.eu/')
typer.run()
```

Needs Chrome Driver in the same directory to run. You can get it from here

<https://chromedriver.storage.googleapis.com/index.html?path=2.28/>
