Thread: [Shitty typing test bot](#)

Ensky - March 24, 2017, 1:13 am

I'm new to Java, I made a Python version so I thought I'd give it a go in Java too.

Here's it in action (it's slightly slower than the Python version, however.)

The code, please criticise me.

PHP Code

```
<?php
package typingTest;

import java.util.List;

import org.openqa.selenium.WebElement;
import org.openqa.selenium.chrome.ChromeDriver;

public class TypingBot {

    static final String URL = "http://typing-speed-test.aoeu.eu/";
    static final ChromeDriver DRIVER = new ChromeDriver();
    static List<WebElement> wordList;

    public static void main(String[] args) {
        DRIVER.get(URL);
        setWordList();
        run();
    }

    synchronized public static void setWordList() {
        wordList = DRIVER.findElementsByXPath("//*[@id=\"words\"]/span");
    }

    synchronized public static void run() {
        WebElement input = DRIVER.findElementById("input");
        for(WebElement el : wordList) {
            String word = el.getAttribute("innerHTML") + " ";
            input.sendKeys(word);
        }
    }
}
```
