Thread: [Javascript scrollbar question](#)

o??ervan? - March 24, 2017, 4:46 pm

I want the same scroll effect like this but I can't seem to find a jquery plugin or javascript that does this for me. I don't have any idea how I can achieve this. Basically when I scroll down a little until the food listing is visible, only the food listing scrolls with my scrollbar.

Example:

www.pizzeriapronto.nl

Charger - March 24, 2017, 4:49 pm

View the source of the page and see what they use.

Not quite sure what they are using but you can definitely recreate this effect with sticky positioning!

Here's a good read:

<https://css-tricks.com/position-sticky-2/>

and a good demo:

This is simply sticky positioning. Very simple. Added to chrome support in 57.X

Code top: 10px; /* Space from top of screen */

position: sticky;

Note: The top attribute MUST be specified. Chrome is still shady here and there. But it will get better.
