What type of audio setup do you have? Currently have a stock 2016 Acura ILX with the base 6 speaker setup. Wanting to get my 10in AIO sub installed I had in my previous car because the audio is flat as hell. Listen to a lot of EDM and I can't really stand the flat audio VS my old bumping junk car.

98' Accord 2.0i 108kW for Europe (CG7). Blasting its stock Dolby Bose audio system. The Four Speakers in four doors and the sub-woofer behind the back-seats is still holding up so well, that when the bass drops - It's hard to concentrate what's happening through the rear view mirror ?

Raz Riverblade - March 27, 2017, 3:24 am

Stock, It's good enough. I have no need for blasting audio trough my car since I usual drive through a lot of cities at ungodly hours.

Many people wouldn't agree

My simple 10 was good enough to enjoy inside but wasn't too extreme where it would bother everyone. Then again I'll be blasting the music so loud to the point where when I reached to the gate I'd be yelling at the person on guard.
