Thread: [Need some way or tool to check user:pass list of Facebook users](#)

roni2228 - March 27, 2017, 8:52 am

Hi, I have a list of username:pass accounts that I need to check if the passwords are correct or incorrect.

I preferred to do it manually but after I wrong several times Facebook block my IP and lock every account that I'm trying to login (if the password is correct).

How can I check my list (of about 500 accounts) without locking the accounts..

Thought about to use socks of vip72 but maybe there is an easier way to do it..

Thanks

There are tools to do this.

I can help you out as soon as i get home, so hold on and I'll pm you soon :)

Look into sentrymba. Should do what you're looking for.

Manipulate - March 27, 2017, 11:40 am

There are some tools in the marketplace on this forum if you are willing to spend cash.

I didn't find any tool for it :\

Can you help me please find some tool?

Thanks

I can't find anything

Link or name for some tool?

Still need some way,

Tried to do it with sentry mba with config called "proxyless facebook", but I still have the same problem, after few login attempts facebook lock my ip...

and the users are from Israel so if I use socks or proxies it's a little problematic because there are no enough socks or proxies of Israel...

Still looking for solution
