Thread: [Kill a system process in Win10 \[Unsolved\]](#)

matty45 - March 27, 2017, 1:41 pm

Hello, i made a program that is supposed to kill system processes but for some reason, this happens:

If anyone knows a way to fix this, please tell me

I have made it require highest available perms using the application manifest.

Skeetz - March 27, 2017, 1:42 pm

may require admin perms to kill the task.

Zilog80 - March 27, 2017, 1:52 pm

"Access is denied" ---> What do you think is happening here?

Side-note: hmmm..."PCDestroyer"...Was not there a worse name? ?

What about uiAccess? are you setting the flag to true in manifest?

Hm, no. Ill try setting that to true and see if that fixes anything.

Edit:

Umm nope:

There's some processes you can't kill even if you are admin, namely the infamous "SYSTEM" process, which has PID 4, so, bottom line is, exclude those processes or place a try-catch and deal with the rest.

Are you just trying to kill system processes with a loop? Because if yes, you might want to target a specific process to crash the system, otherwise you'll be drawing blanks.

Mr. Robot - March 29, 2017, 5:40 am

Have you tried disabling it in services?

Windows+r

services.msc

Disable on startup - reboot

Or try msconfig and disable in there.

I have decided to give up at the moment until i learn more knowlege about c#

Dan Siebels - *April 13, 2017, 1:15 pm*

make sure you change prc. to whatever you have in front of prc.Start();

Code if (Environment.OSVersion.Version.Major >= 6)

```
{  
    prc.StartInfo.Verb = "runas";  
}
```
