Thread: [|| Convert Byte to String and back ||Without Encoding ||VB.NET * Csharp ||](#)

mailen.doon - March 28, 2017, 9:40 am

Hello

this is my first thread in HF

now we can convert byte to string and back without Encoding Class

will use two methods in vb.net and c#

the 1st using Class Buffer exactly BlockCopy method to copies a specified number of bytes from a source array starting at a particular offset to a destination array starting at a particular offset

BlockCopy(src , srcOffset, dst, dstOffset, count)

src : source array

srcOffset :starting offset of source array

dst : destination array

dstOffset :starting offset of destination array

count: number of bytes to copy

the 2nd method convert byte to char array and return in string or converting string into char array then to byte

source: [h tt ps: // pastebin .com/ Wa1ixdBy](https://pastebin.com/Wa1ixdBy)

thanks to

Tee Plow

always have something to say mh ? ?

This can be used to make a simple string obfuscator with either mono or dnlib, if needed i can provide exemples projects @op
