Thread: [Encrypting / Obfuscating .vbs scripts](#)

A4A4ANDY - March 30, 2017, 6:28 am

Hey,

I recently downloaded a worm that creates a .vbs client, now it is detected by 6/35 anti virus, does anyone know techniques on how I can make it harder for AV to detect it?

Thanks for your time!

SIM-3432714 - March 30, 2017, 7:11 am

If you want PM me, i can crypt it.

Jar Jar Binks - March 30, 2017, 7:13 am

Interesting, could you pm me the source?

I'm sorry, unable to PM yet! it was the worm used in this thread: /showthread.php?tid=5427019

edit: I am able to PM and have done so to you!

Made me laugh but from what I understand you have to change methods and a lot of other things.

This is a VBS file and not a PE file. There are no icons/resources to be changed.

Jar Jar Binks - March 30, 2017, 2:56 pm

Oh as for methods OP. You can download software like

>>caution dl link ahead<<

[this](#) and others to wrap it into an exe and then crypt that exe

This software should bring the detection ratio down to 1:54 unencrypted

EDIT:

I tested it out myself vbs to exe brings it down to 2:54

And obviously if you crypt it with a good crypter she'll be fud
