Thread: [USB Flash Drive with a PGP password?](#)

mazyoona - March 31, 2017, 1:57 am

I'm looking for a USB Flash Drive that in addition to a normal password also have a PGP password or such (a more secure second password) that needs to be entered to access the documents, pictures, videos, etc that may be saved on this flash drive.

It's also a big advantage if the flash drive looks empty to outsiders that may get their hands in/obtain the device. It's also a big advantage if entering the wrong password 5-10 times consecutively will end with all the files on the flash drive being permanently deleted.

I have an budget of \$60-\$120, however, I might be willing to pay a little more if it's necessary. In addition to this it is also necessary that the flash drive has a long life time (at least 3-5 years).

Any good suggestions? I need this soon as I'm starting a new job and it's pretty confidential work.

Your employer should provide you the required drive to keep their info safe. Don't buy one yourself.
