SIM-1534439 - April 2, 2017, 10:06 am

I've created this thread to talk about the current trends on XRP (Ripple), investments and theories!
We've hit a lot of replies lets keep it up!

Lets fucking gooooo.

Zexus99 - April 2, 2017, 10:06 am

It's already halfway through .5 as well
Oh shit just dipped as of writing still at .5 tho

Kinguin - April 2, 2017, 10:09 am

\$0.048970 (126.72%)

Holy shit, I've got like 350\$ worth of coins now, should I invest more?

PoLoW - April 2, 2017, 10:09 am

Fuck yeah man lol
Imagine if it reaches \$1 lol i will donate \$40 to Mr Robot he inspired me

I reinvested another \$500 this morning after seeing it double overnight, and I have already profited from the \$500 purchase.

Talent . - April 2, 2017, 10:10 am

What the hell.

I wish I put way more in this :(

Fuckkkkkkkkkkk

Have made a few grand so far though.

With all the news it has been making though I do see it rising even more in the future, just did not expect this.

Ooze - April 2, 2017, 10:10 am

For those thinking about investing more, I say wait for it to cool off tonight, there was a lot of press today it's bound to dip

It's the one million dollar question my friend, i've got some money in other coins i might sell em and invest in Ripple since it's still cheap.

Copywriter - April 2, 2017, 10:12 am

HOLY FUCKK!!! PEOPLE WHO INVESTED AT 1.2 HAVE MADE FUCKING MAD MONEY

Ooze - April 2, 2017, 10:12 am

Xeenon - April 2, 2017, 10:12 am

IM MAKING SO MUCH MONEY, HAHAAHHAHA

Regulus - April 2, 2017, 10:12 am

Well at least I could afford to invest \$5 into it lmao.

Would have invested more if I had more, will invest more once I get some more money.

Alien - April 2, 2017, 10:17 am

I predicted this would probably happen. It seems unstoppable.. but there is still a good chance it will dip down soon. I'm aiming to cash out at 6 or 7 cents (Praying it makes it there today)

Laski - April 2, 2017, 10:18 am

It's still going up as we speak. Holy shit this is insane. I keep refreshing and see more and more money.

Alien - April 2, 2017, 10:19 am

The pace its increasing at is insane. I'm thinking we will see 6 cents in the next hour or two. Potentially even 7 cents if this keeps happening.

lol

EDIT: Never mind, back up.

Ooze - April 2, 2017, 10:21 am

It's bound to dip as people cash out, but it will continue to rise and for those of us in it for the long run profit will be made

When it dips AND IT WILL don't freak out

I'm predicting a 2 cent dip

No one can predict for sure but that's one way to go out it. With me, I usually sell half of what I have once it hits a certain point just in case it doesn't go my way so I'll be half bummed. But if it goes down, I'll still make hella profit.

Change the ratio from BTC to XRP back then in 2013.

XRP will rise, they're making BTC a main currency in Japan very soon, and they own millions worth.

If you want an accurate price of XRP, look for trading platforms because they give you the real-time value that people place on the coin. Even having a difference of 10 minutes can make a huge difference in terms of the volatility of the coin you're looking at.

Let me sum it up Ripple went to an all time high, then Poloniex got ddosed, which in turn made people mad about losing monies ?

I'm really on the fence about if I should convert my 200 ETH to ripple or not lol if Ripple drops to around 2 cents ish again. Much faster ROI

That would get me around 495K ripple coins, going from 2 cents to 5 cents alone is a 16.5k profit lol

50 cents per ripple would make me around \$250,000 USD

Yeah but since Poloniex had a ton of issues today most people weren't able to cash out preventing the price from dropping.

Pretty smart move by the DDOS attackers imo, I'm sure they bought tens of millions for dirt cheap before planning the attacks.

Gonna be a while before prices go <2 cents again.

Think about it, if more and more banks start using Ripple which they most likely will, you will be rich, but if Ethereum decides to be adopted by another large business, it will also double possibly. It's all a what if situation to be honest...but looking back at the chart for Ripple, it looks like it peaked a while ago and it just peaked today...I think it's safe to say it will drop in the near future...it was after all a pump and dump today.

Interested to know why XRP isn't a stable currency as well? There's a few banks that are looking into their blockchain (Axis in India and a few others), so there must be some kind of value to it.

Also, every commodity ever has been pumped and dumped at some stage, it's just market dynamics at work.

Ive decided to buy back into XRP while its low
Gonna try to not look at it every day for the long term

rep destroyer - April 7, 2017, 12:30 am

The price is dropping because there are too many sellers taking profit on the big rise. This is probably XRP developers, previous pump bag-holders, owners taking a little profit to go on vacation, and many, many traders trying to outsmart each other.

Eventually there will be more buyers and the balance will shift. At that point you better have a bag full of coins and hold them tight for the X10 rise or more..

In which case you better be ready to short the shit out of it to the bottom floor and profit like a boss. I don't have a crystal ball and anything can happen in crypto.

Pick your side!

Ripple Signs Up Another 10 Banks As Blockchain-Based Payments Grow

Ripple signed up another 10 banks: MUFG, BBVA, SEB, Akbank, Axis Bank, YES BANK, SBI Remit, Cambridge Global Payments, Star One Credit Union and eZforex.com. Ripple Labs continues to grow its client list with small and more substantial banks, engaging clients in the payment service provider market. Ripple CEO Brad Garlinghouse is confident in the technology and views the customer base acceleration logical, stating:

"People know Ripple is the only Blockchain solution for payments that is proven in the real world and it's driving demand from financial institutions of all kinds and sizes because they want to stay ahead of the curve."

If this is true then RIP all those who sold their coins at this low price. It's now the big companies start using this "new" blockchain system.

You all should keep in mind that this blockchain system is kind of "new", but it's in its early years so the price will keep going up, especially all the old coins. That's what i believe.

A comeback to what ..? My aunt and her friend - who's very successful on the stock market - both told me today they're jumping onto the Ripple ship for at least \$500 each. The friend, thinks it will be worth \$300 in a few years, I think she was intoxicated with that number - and have apparently been told multiple times now how completely impossible that is with this `market cap` terminology that I half get. That being said, how much higher can this coin really go? Even \$1 isn't too bad if it doesn't take 5ever to get there. This is the first coin I've genuinely read into a bit, and of course the bias sites/articles are so interesting and I think the technology sounds amazing. But then people say stuff about market cap and volume and I get lost xD

I think it's been this price for a while and shouldn't move without something big happening from some things I've read and what I've been told. However, the technology is truly fascinating in my opinion... This is still probably `cheap` if you plan to hold long-term.

For all you Rippers out here I thought a recent tweet from Ripple sharig this link shows some good commitment to Ripples investors to help stabalize its value. We all already know about their descision to take a large number of coins out of circulation and put it in escrow by the end of 2017 but I think this statemrnt will help Ripple regain some of its popularity and value leading up to when they actually do it!

<https://ripple.com/xrp/market-performance/>

"Since 2012, Ripple has methodically sold XRP and used it to incentivize market maker activity to increase XRP liquidity and strengthen the overall health of XRP markets. To alleviate concerns surrounding XRP supply, Ripple has committed to place 55 billion XRP into a cryptographically-secured escrow account by the end of 2017. By securing the lion's share of XRP, investors can mathematically verify the maximum supply of XRP that can enter the market."

I mean this is all `old(er)` news here. This isn't going to make a "huge" difference. I think it will install some more `safety` in the eyes of investors - but not like this is a big change that will bring "RIPPLE TO THE MOON." I agree this is certainly a step in the right direction of trust and getting people to see them as a real deal - not a pump and dump since they own mass majority. But to see this as a "huge difference" seems a bit overstated.

Using XRP with the Ripple protocol will save them double the amount of money. Around 66%. XRP will be used as liquidity or a bridge between 2 currencies. XRP also eliminates the need for Nostro accounts. There's your short explanation why banks WILL use XRP.

It's not clear how those dollar amounts and percentages were calculated. Like how inflated throughput numbers are a result of dev teams estimating tps instead of possible usage per second, it's all marketing at the moment.

Maybe but who knows. But i can tell you its going to be cheaper than anything else. Let's look at it this way: SWIFT is crappy and slow. Look at it as it is an old road right? Here comes Ripple with it's blazing fast ledger. (the new highway). Do you think they will transfer expensive and slow fiat (crappy cars) across ripple's new highway? Ofcourse not. You will use a brand new fast car (XRP) too travel on that nice new highway!

What price did you enter?

I'm freerolling with my initial buy at 2-4 cents lol. The run seemed to be based on a lot of Korean buyers perhaps trying to get in early because of speculation with Ripple integration with Kakao or something. The hype is just starting up with Ripple teasing updates, so this correction won't last for long

So inflated, cripple is all I have to say.

Not bad to daytrade until you get dumped on.

Percyi - August 23, 2017, 4:14 pm

Jumped on the trade. Made 20% so far. Have a sell order at 7k so we'll see :)

This was a gold mine of a thread.

Looking at the evidence it would've been great to invest in this coin for the mid/long term. Too many people kept bashing it for being backed by institutions though.

Yeah I guess it was, people didnt listen hahaha

20 XRP will be held there in order to reserve the address. This is because the Ripple network requires a minimum of 20 XRP to be in any active address. The money does not go to anyone, and the difference will be credited to your account if the minimum requirement is ever lowered. Once you have funded your deposit address with 20 XRP, you will be able to deposit any amount and receive your full deposit. Please note that if you generate a new deposit address, you will have to fund that one with 20 XRP.

Whats this for a bullshit?

You need 20 XRP to activate an address (account). This prevents spam.

Do I gonna get back my 20 ripple

JustMex - January 6, 2018, 3:23 am

No, your 20 ripples are over.

Major necropost, but came back to say I've kept my initial investment since 7 years ago. Of course it's nothing compared to its ATH but looks like we're getting back to that position in the near future. Had I only listened to my own advice and put more money into it..

What price targets are XRP holders aiming for next?
I've been reading cyclical predictions discussed on reddit and X.
What are people expecting?
