Be CAREFULL GUYS DONT BUY

That means his crypter binded with backdoor? Just make a virustotal scan to prove. But really bad if he do so!

Only saying that wont be enough proof. I would suggest you to make a video about it, screen record your screen. I could easily buy any app and say the same.

Nothing against you or exerbyte's owner..!

Can confirm that this is not WinRAR's update server.

bury77nl.zonive.com's IP: 185.77.129.177 (belongs to QHOSTER LTD. so probably VPN)

Do you think it binds a RAT or something? Or maybe just a backdoor? With a sample it probably wouldn't be too hard to find out
