Thread: [Create your own DNS for 2\\$ per year !! CHEAP](#)

©Ratatouille™ - April 2, 2017, 9:46 pm

Hi guys,

Today I will show you how to create your own DNS for 2\$ per year.

In first you need to be registered on namecheap :

<https://www.namecheap.com/myaccount/signup.aspx>

You've to use a valid e-mail address, for this example I'll use a temporary e-mail :

Spoiler [\(Click to View\)](#)

When you're registered, you need to deposit some funds on your account (click on "top-up" as on the screenshot) :

Spoiler [\(Click to View\)](#)

Select the payment method that you want use and then click next

Put 1.50\$ and click "go to bitpay"

When you got the money on your account, go in "domains" => "registrations" Spoiler [\(Click to View\)](#)

Choice the name that you'd like to use, do not put a name like microsoft, windows, facebook, etc. Use something legit :

Spoiler [\(Click to View\)](#)

Next page use : <http://www.fakenamegenerator.com/>

then click "continue"

Do not care about the next page just click "continue".

After that, you are at the payment page, select the button "account funds" and then click "continue"

Spoiler [\(Click to View\)](#)

Click now and wait a while.

Click on "manage"

Spoiler [\(Click to View\)](#)

and again for the next page

Do not leave this page and open a new tab and go open an account on cloudflare :

<https://www.cloudflare.com/a/sign-up>

Quite easy :

Spoiler [\(Click to View\)](#)

When you're login, put your domain name that you purchased on NameCheap in the inputbox then click "Scan DNS Records"

Wait a while for the scan, when the progressbar is done click "continue"

In next if you're good you got this :

Spoiler [\(Click to View\)](#)

It may happen that someone nothing is displayed, in this way click on "cancel" and do again all

step, else if this is ok click "continue"

Spoiler ([Click to View](#))

You got now that :

Spoiler ([Click to View](#))

At left your current nameserver on NameCheap.

At the right the new nameservers from cloudflare.

So now you've to replace the nameservers on NameCheap by the new nameservers from cloudflare.

By default the nameservers are on "namecheap BasicsDNS", you've to select "Custom DNS"

Spoiler ([Click to View](#))

Then put the new nameservers from cloudflare and click on the green arrow

Spoiler ([Click to View](#))

When you're done, back on cloudflare and click "continue"

Spoiler ([Click to View](#))

Now go in the tab "DNS" and in "A" click once and past your IP (VPN will be preferable).

Go now in your RAT builder and in the DNS/IP part, just put your domain

Spoiler ([Click to View](#))

If you got a new IP, then back on cloudflare and replace like the last time the IP, the DNS will be refresh in few secondes.

Sorry for the bad presentation if one guys want help me with color and more pm me with the new BB Code?

CKkio23 - April 2, 2017, 9:54 pm

Nice tutorial would help out a lot of users needing a DNS

Armada - April 2, 2017, 10:01 pm

Well written, and love the use of screen shots to help visualize.

One point of note though and a reason I refuse to use namecheap myself.

They answer ICANN requests quicker than Flash fucking Gordon. So aggressive or mass spreading this host is useless.

Cain_ - April 2, 2017, 11:12 pm

Nice tutorial, really helped me out.

Ianontios - April 3, 2017, 12:04 am

Love the tutorial thank you, but for the rat i need it needs a port. Can i use any port or what specific port should i use?

Armada - April 3, 2017, 12:17 am

(Apr 3, 2017 12:04 AM)Ianontios Wrote: ([CITE](#)) Love the tutorial thank you, but for the rat i need it needs a port. Can i use any port or what specific port should i use?

Will not matter so long as you open your ports on your end or VPN. ?

Open the port on the vpn like Amarda tell you

c0rle0ne - April 3, 2017, 3:15 am

This is simply awesome. HQ products from RATA as usual. Thank you m8.

pinkpony69 - April 3, 2017, 6:53 am

Great tutorial. Helped me out tons.

Hoodie+ - April 3, 2017, 10:31 am

Does Cloudflare work on any other protocols besides HTTP and HTTPS?
Does it work in for example IRC?

French Products - April 3, 2017, 3:10 pm

Yes you can enable full ssl on cloudfare , for IRC idk

Johnapex - April 4, 2017, 11:14 am

Nice tutorial dude, with or without name cheap. At least it covers the main basics, good job!

thx

Armada - April 4, 2017, 11:34 am

It will work for IRC. ?

©Ratatouille™ - April 9, 2017, 10:33 pm

If anybody have trouble for create , i can setup for you !

I can also setup your own website for get direct link , so you sure you don't distribute sample to others !

Armada - April 10, 2017, 12:45 am

Yes , i'm french , i know i write bad english is for that ?

ONURIS - April 10, 2017, 5:19 am

good tutorial Thanks RATA

Domain Authority - April 10, 2017, 5:25 am

HQ & Creative Content. Thanks Man.

I was not making a joke or commenting on your english abilities, was just wondering what your native language was, that is all :)

fintapper - April 10, 2017, 10:19 am

Great tutorial! I am not sure why people spend ruthless money to purchase some crappy DNS on HF. I've been using FreeDNS for 2 1/2 years never have I've been banned. I will probaly lookforward into creating mines also

joe9s - April 11, 2017, 4:17 am

Excellent tutorial, it will serve many people

sparker3x - April 11, 2017, 5:27 am

Good tutorial Thanks RATA it help me alot

©Ratatouille™ - April 11, 2017, 2:08 pm

Happy this help you

Don't hesitate hit me pm if get any issue

?ShadowOp - April 11, 2017, 4:14 pm

since when do people call a domain name a DNS?

a DNS is the bit that turns a domain name into an ip address, you can run your own one of those too, but its a completely different thing

©Ratatouille™ - April 11, 2017, 5:22 pm

Maybe but this work well

HappyCEO - April 11, 2017, 6:29 pm

am i the only one who needs to donate 5 or more to be able to top up ?

©Ratatouille™ - April 12, 2017, 12:46 am

(Apr 11, 2017 06:29 PM)hristingur Wrote: [\[CITE\]](#) am i the only one who needs to donate 5 or more to be able to top up ?

By paypal is 5 minimum , but is not really good buy this by paypal

Qw3r Wrote:Westgeorgii Wrote:Hi bro

i saw you posted Domain -> Tonic.to DNS Free -> Blazingfast.io

how can one use this services and i also hope the don't block connections like duckdns and no-ip because i'm tied of this dns providers.

thanks

Ahoi!

- Registration My.BlazingFast.io

- Click on ORDER MORE <http://prntscr.com/evk559>

- Click on DNS (Anycast DNS) <http://prntscr.com/evk7u0>

- Select "I will update the nameservers on my existing domain" <http://prntscr.com/evk9bj>

I do not know whether it is 100% bullet-proof! But this is no matter since their domain is bulletproof and they can change the DNS easily and their domain remains the same!

ZwntanosNekros - April 12, 2017, 7:16 am

Thanks for this guide , it's so HQ...good job

Zweisicht - June 23, 2017, 8:54 pm

Thanks RATA, this helped me alot.

Terribly sorry for grave-digging, but I just wanted to ask if namecheap wouldn't ban like supper fast? Once again thanks for this great post.
