Thread: [possible to go from ios7 to 9.0.2 to jailbreak?](#)

proxymime - April 7, 2017, 8:03 pm

Hey guys, I have a question

is it possible to still upgrade from ios7 to 9.0.2 even though apple stopped signing it? through like a custom recovery that has the 9.0.2?

is it possible to do such a thing? I know you can on android but on ios i dnt know

any advice would be great. i have this old ipad 3 which i found on ios7 which is jailbroken but running really slow, wanted to update to 9.0.2 to continue with the jailbroken ipad

thx in advance

I'm pretty sure you can always upgrade iOS no matter what you upgrade to, but you can't downgrade.

I haven't been in the jailbreaking game for 3-4+ years though, not sure if it's changed.

But just be aware, your iPad will just get even more slow if you update it. The newer updates requires even more than the older ones did.

Hm interesting, thought maybe it would run smoother. maybe now ill just do a full wipe and jailbreak again on ios7. see if that makes it better.

till then im still open to suggestions :)

Iv also been out of the game since ios 7 :D, but today i found it and thought i would do some digging and havent found anything recent.

Quick answer to your question: No. You can only upgrade to the latest iOS Version.
