Thread: [Why do I need to parse a double into a double?](#)

?Quantum? - April 8, 2017, 10:24 am

Hey, I did this code with a video tutorial:

Code import java.util.*;

```
public class DatenEingabe
{
    public static void main(String[] args)
    {
        Scanner leser = new Scanner(System.in);
        int anzahl;
        double preis;
        String bezeichnung, eingabe;

        System.out.print("Geben Sie einen Preis ein: ");
        eingabe = leser.nextLine();
        preis = Double.parseDouble(eingabe);
        System.out.printf("Anzahl: %.2f € %n", preis);

        leser.close();
    }
}
```

Why do I need to parse my preis variable to a double, if I declared the variable as a double above?
Why don't I need to do this with Strings? .. [/php]

Did you code this, fellow German, or did you literally copy 1:1 german code? ?

I coded this as a German, from a German video by Rheinwerk Verlag ^^

You don't need to parse it as a double; you can simply call Scanner#nextDouble instead.
