Thread: [Remote DDoS Protection That Doesn't Suck](#)

OrcinusTech - April 9, 2017, 5:48 pm

Hello,

After CloudFlare's success, their QoS has gone to shit and their security as everyone knows is complete garbage.

OrcinusTech will soon be releasing our CDN to the public.

This CDN will offer full AnyCast beginning with 3 pops spread throughout the globe.

A few more features such as:

- *The highest level DDoS protection (True layer 4 and layer 7)
- *Global content caching
- *Super cache feature (gives you insanely fast load times often time faster than CloudFlare)
- *Free Automatic SSL for ALL websites

We will also be offering other extremely unique services such as AnyCast TCP/UDP reverse proxies for game servers.

AnyCast is critical because it means that all of your website or game server traffic will be routed efficiently and thus have the lowest latency.

Please post here if you have any questions (we are also looking for prominent members of this forum to alpha test the system and receive lifetime access to the CDN)

This includes:

- *Owners of large websites
- *Users with powerful DDoS attacks

Fortified Design - April 9, 2017, 5:50 pm

I'll be interested in this possibly in the future. Keep us updated or make a new thread with progress ect.

OrcinusTech - April 9, 2017, 5:52 pm

Awesome! We would love to have you on the system :)

Will definitely keep you guys updated as the development comes along!

? Soufian ? - April 9, 2017, 5:53 pm

Do you realize it's so easy to get your website's back-end?

OrcinusTech - April 9, 2017, 5:55 pm

(Apr 9, 2017 05:53 PM)? Soufian ? Wrote: [\[CITE\]](#) Do you realize it's so easy to get your website's back-end?

Our system will not be designed how CloudFlare's is, it is categorically different so the same kind of back end IP exposure is not available.

I am aware that websites using CloudFlare or any other CDN with similar architecture allows easy resolving of back end IP addresses.

Charger - April 9, 2017, 5:55 pm

So you have the same global data centers as cloudflare?

You plan on matching their SLA?

Doubt it.

No, in the post it clearly states we have 3.

Well if you run a low traffic website where a high level of security isn't a concern than CloudFlare is probably the best option for you.

Our CDN will be for a very niche sector of users who want the highest security, privacy, and also performance.

(Apr 9, 2017 05:56 PM)? Soufian ? Wrote: [\[CITE\]](#) I'm talking about this:

Nice, you posted the IP address of someone using your API... I am sure that is really good business.... but anyway our web tools website is not even on the same server cluster as the mitigation system.

RIP.

Anyway, I have never known of a website, when configured properly on CloudFlare, to ever have it's IP exposed.

I don't even know who you are, I don't care whether you use my API's or not.
My business has nothing to do with how I got your IP address.

Everyone with a clear brain capacity can get your IP lol.
If you want to know how I got it, just ask me.

RIP? That piece of information literally means nothing and has no impact on the CDN. That only shows that guy doesn't respect his customer's privacy.

In regards to your CF statement, then I guess you are just unaware of kind of security risks CF brings and you wouldn't be someone for this service.

(Apr 9, 2017 06:00 PM)? Soufian ? Wrote: [\[CITE\]](#) I don't even know who you are, I don't care whether you use my API's or not.

Did you just use the email spoofer?

Also it doesn't matter that you got the API of my web tools website, it has no correlation to the CDN

Did you just use the email spoofer?

Also it doesn't matter that you got the API of my web tools website, it has no correlation to the CDN It's not "Customer's privacy", it's public available information once you're sending it with your e-mails.

Your e-mail spoofer is leaking your back-end IP.

Next time don't cry it out on me and be happy I brought this to your attention, so you won't make the same stupid mistake.

Especially when promoting a service that is supposed to protect your back-end ip.

OrcinusTech - April 9, 2017, 6:05 pm

(Apr 9, 2017 06:04 PM)? Soufian ? Wrote: [\[CITE\]](#) It's not "Customer's privacy", it's public available information once you're sending it with your e-mails.

Your e-mail spoofer is leaking your back-end IP.

Next time don't cry it out on me and be happy I brought this to your attention.

You didn't bring anything to my attention it's common knowledge that if you send an email from a server it will expose that IP address.

It's not a concern for me, because again: it has no correlation to the BitMitigate service in any way.

? **Soufian ?** - April 9, 2017, 6:06 pm

It's not a concern for me, because again: it has no correlation to the BitMitigate service in any way. Then why do you get mad at me for "Not respecting customer's privacy"?

OrcinusTech - April 9, 2017, 6:08 pm

(Apr 9, 2017 06:06 PM)? Soufian ? Wrote: [\[CITE\]](#) Then why do you get mad at me for "Not respecting customer's privacy"?

Because your posts have literally no correlation to the OP and are just trashing the thread/confusing people who don't know the full technological aspect of what you are saying.

Gigabear - April 9, 2017, 6:10 pm

superior athenalayer is back boys! cant wait for quality protection

? **Soufian ?** - April 9, 2017, 6:16 pm

I'm not trashing your sales or thread.

I started by telling that your back-end IP can be leaked, and you include my business in this nonsense.

Anyways, here's another non-trash question.

Code After CloudFlare's success, their QoS has gone to shit and their security as everyone knows

is complete garbage.Site: orcinustech.com
IP: 104.28.27.211
ASN: AS13335 CloudFlare

Why do you use CloudFlare as CDN while you've got your own CDN and are offering your own CDN service which you're saying is better than CloudFlare? Isn't that a bad example for your business?

It's like, Apple using Windows to develop Mac.

OrcinusTech - April 9, 2017, 6:41 pm

Okay, but it means nothing in regards to this CDN... Any website sending emails from local SMTP server will leak its IP. There is nothing that any remote DDoS protection service can do about this.

I use CloudFlare for now because my service isn't online yet hence the Coming Soon... but due to their recent severe leaks of data I will no longer be using them once my CDN is online ?

Moronic statement #1

Quote:I am aware that websites using CloudFlare or any other CDN with similar architecture allows easy resolving of back end IP addresses.

Moronic statement #2

Quote:Anyway, I have never known of a website, when configured properly on CloudFlare, to ever have it's IP exposed.

Smart statement #1

Quote:My business has nothing to do with how I got your IP address.

helo should have given it away immediately but apparently not for this guy.

Quote:In regards to your CF statement, then I guess you are just unaware of kind of security risks

CF brings and you wouldn't be someone for this service.

Moronic statement #3

Quote: You didn't bring anything to my attention it's common knowledge that if you send an email from a server it will expose that IP address.

Moronic statement #4

@OrcinusTech, sadly sir, it seems that you're being exposed for being a moron. Best of luck to your service.

Is it not clear that this is just [Nick Lim](#)(Syracusia) on a new account?

He used to run the now defunct "Athena Layer": [Sales Thread](#) | [His own HF Press Release](#)

He used to run the website "orca.tech": [Proof Orca.tech belong to Nick Lim\(Syracusia\)](#) | [More](#) | [More again](#)

Now orca.tech redirects to: orcinustech.com

He also used the name Orcinus here before: [Proof](#)

I hope this is now crystal clear why he's being exposed as a moron. Because HE IS a complete and utter moron. [He's somehow looked so stupid in an argument with Martin Shkreli that it forces you to actually side with Shkreli. His anonymous anti-virus scanner just scans on VT and displays the result on his own site. He likes to drift his car through neighborhoods then justify it as not being unsafe as he's a good driver.](#)
