Never mind, this method is now saturated...

Will this work on MacOS?

If not, can I use it on a VM or via a program that runs Windows applications or will I have to use it on my Windows Machine?

Sorry don't know much about miners.

It won't work on Mac OS, but I see no reason why it won't work in an emulated Windows environment.

Silent Monero Miner Review

I received a review copy of this miner and just tried it out. It does everything that is said in the OP and this is definitely worth the price that is set, no doubt. The support is great as well, I have never used a miner before but just learned everything I need to know with help of Riddick. Appreciate the help and the great miner, good luck with sales.

Hey man. I would love to buy it but please promise me this is another bullshit miner.

I had a few and they either didn't work or they even started mining for the seller itself (assholes :(!).

Can you guarantee me this file is 100% CLEAN! So no wallet id switching etc.?

Thanks!

Anyways, after spending hundreds this \$15 isn't that much of a risk. I PMed you to purchase.

If this really works as you say i am happy to write a nice review :).

There's no wallet switching or anything like that, it works only as advertised.

Works as advertised. One of the cheapest miners i bought and the only one really working as it should.

Happy customer right here.

Riddick was nice enough to give me a vouch copy of a bin of his miner and I am very impressed.

I executed on 90-150ish bots, and got a rate of 2000 H/s, easily this is verey profitable business to get into if you have the funds for.

ALSO Note that my bin was not FUD, i did not crypt it, and left it raw, but still, great results.

Hi,
Does your miner have anti taskmanager or stop mining when taskmanager is opened?

occupi - May 1, 2017, 10:26 am

Hi, how does it compare against Friedrich Nietzsche's Monero miner?

It appears to have similar features so I'm just curious if I'm gaining anything by getting another miner.

It appears to be a popular feature, so it was added to the miner not too long ago.

I don't know how mine differs to his. Most miners are pretty similar, just some claim to have features that they actually don't have. I'm definitely not saying that about Friedrich Nietzsche's miner as his seems cool, I'm just trying to say do some research before purchasing anything. I suggest asking somebody who has already bought it for their opinion.

The stub size is roughly 750KB. I can make it stop mining if Task Manager is opened, etc. You can get the second one at 50% off.

Anarchytect - June 2, 2017, 6:55 am

As i've promised, here's my review

Stability 9/10

The miner has a very nice and wonderfully hidden startup, but the process persistence is absent, the process can be terminated and it will be reopened only on a PC restart. But it's not a relevant problem, an unexperienced user will never discover the miner. Anyway, the miner is very stable, i've never noticed of miner crashes, bugs etc.

Hidden 10/10

As said before, the miner is wonderfully hidden, the mining will stop in no-time when the task manager is opened, so the user will never notice of it!

Price 6/10

\$18.99 is a little bit high for a new user which has less money, but for what the miner offers, it's a right price.

Hashrate 8/10

The miner is set up to get the best hashrate from your bots, with my processor (i7-4790k, 4.00 GHz) i've got +2 kh/S

Overall

An investment for this miner will help you to get more profit from mining, i compliment myself to Riddick for the great work that he is doing.

That's \$20 a day, nice work. Don't forget, the miner isn't going at 100% all of the time or it will disturb the users which may result in the software being removed. If the user's system is completely idle for 30 seconds it starts using full power until they resume. Also, how many of the 1000 loads were online? Realistically your hash rate should be even higher, unless they are already being mined on by somebody else, etc.

Update: Anti-Sleep mode will be added to all new builds due to multiple requests and the price has been lowered to just \$9.99.

If you're an existing customer and you want an additional build, it's 50% off ?

If you wish to purchase, simply follow the steps in the first post.

I'd be very grateful. Somebody did this on very short notice as a freebie if you can't tell ?

Skil@h - July 8, 2017, 12:44 am

Paid for it 24 hours ago, waiting for your reply since :)

Seller has send to me a wrong build.

BE CAREFUL

<https://hackforums.net/showthread.php?tid=5665131>

also owner claims fake features,

it should mine with 2 threads (50% cpu) instead of 1.

People started asking for 50% usage instead of lower when not idle. Also, this has been resolved, please check your PM ?
