Thread: [The Nanocore case and HF quality/reliability](#)

EvilNerd - April 11, 2017, 12:01 pm

Nanocore was sold here like many other software/service/books.

Suddenly, with no warning, the service ceased, server went offline and the software become not operative.

All the people who used it for managing a large number of clients become suddenly unable to work anymore, but with all their clients are still running a server software that tries to connect to their ip address.

The explanation that the owner of nanocore gave for this situation is basically a "because f**k you".

I can't understand how you are gonna to tolerate such a behaviour.

And with "you" I mean: the nanocore users, who have trusted the seller and HF reputation, and the Admins of HF.

I subscribed several hack sites, but browse and make deal only on HF.

Because I felt that the quality and integrity are something liked and enforced here: the policy of zero tolerance with LQP, warez, spam, trolling, scams and illegal activity paid: HF grows and become a place totally different

from the average "teen" hacking site: a place where you can learn a LOT of things, meet competent and serious people and makedeals without the fear of being scammed or infected.

All this trust now was destroyed: nanocore for me was an instrument of work.

A lot of people lately troll any rat thread with the "you are doing illegal things hurr durr" litany.

This is not my case: I've NEVER even considering mass spreading for getting thousands of "slaves".

However this is a gray area: I work for an investigative service and use the rat for minor or employee monitoring, illegal competition, spouse cheating and, when the job is terminated I usually erase the server from the controlled computer for avoiding problems.

Now I and all the nanocore users are left with no service and with all our old client who constantly ping our IP address.

(an evidence against us !) How someone can trust HF anymore ?

The otions for the owner of nanocore are:

1 run the server for more 1 week, so we can recover our clients with a more reliable rat or erase the server there.

2 create a tool that, run as a nanocore administator erase (deinstall) all the server as they tries a connection.

3 do nothing and debase the reputation of HF (hope of staff action in this case)

If HF don't condone the use of cracked software should doing something for support the use of paid one: If I was using a cracked version of nanocore the termination of service of the paid version didn't touch me, instead I bought the software legally, I respect the rules and got screwed.

A lot of free rat are coming and, with a precedent like this a lot of people will opt for a free or a cracked version.

This is also against the interests of HF admins: cracked software don't pay sticky.

SIM-2875347 - April 11, 2017, 12:07 pm

I could see why they should keep the servers up for a week to allow for uninstalls but didn't they give a warning period?

ForceJew - April 11, 2017, 1:17 pm

(Apr 11, 2017 12:07 PM)Buildoman Wrote: [\[CITE\]](#) I could see why they should keep the servers up for a week to allow for uninstalls but didn't they give a warning period?

I dont think they did.

Don't quote me on this.

licker98 - April 11, 2017, 2:30 pm

If you weren't doing anything illegal, then why does it matter if the server still tries to connect to your IP? Can't you just phone up your ISP and make up a little excuse as why you want it changed?

Prawnster - April 11, 2017, 2:32 pm

(Apr 11, 2017 12:01 PM)EvilNerd Wrote: [\[CITE\]](#) -snip-

Half of these don't mean anything if these are your own computers, you can safely uninstall nanocore and install another RAT.

Mr. Robot - April 12, 2017, 9:00 am

Or use a legal tool such as Orcus which has permission to operate rather than an illegal tool.

Also don't blame admins of Hack Forums for your mistrust in a piece of software -

If you are using this in a legal environment, use a legal piece of software for large networks or use linux like a normal human being for pentesting.

Cracked software isn't allowed to be sold/given away on Hackforums and if you see it, report it. It's pretty simple to understand.

fintapper - April 12, 2017, 9:02 am

I wish they would of given users a 3 day notice to vacate at least. I primarily used Nanocore to control my RDP's I had at least 250 RDP clients running individual tasks on my Nanocore client. I am struggling to re-locate those clients as we speak. I am not a big fan of Luminosity often times it freezes on my computer. However Nanocore was different it was fast, stable and mobile.

I really do hope the owner re-considers selling off the project I've been a active member since the dawn of 2014. It was one of the bests RAT's I've ever had the honor of using.

Armada - April 12, 2017, 9:43 am

So, let me understand you OP...

You are upset the Original developer of Nanocore and Netseal was arrested, raided and busted, hard drives seized, etc.

And the current people who ran the project decided to shut down shop?

This surprises you, HOW??

ZwntanosNekros - April 12, 2017, 9:46 am

Perhaps that should be a good point to bring up at Taylors hearings.....?

Instead of griping and bitching about it, do something about it, go explain to the courts how you Utilized Nano for legitimate purposes.

Mr. Robot - April 12, 2017, 10:15 am

(Apr 12, 2017 10:08 AM)EvilNerd Wrote: [\[CITE\]](#) Indeed , I used the legally bought nanocore, and got screwed.

The users of cracked nanocore are all happy using it.

Buying something "legally" and buying something "legal" are two different things.

I can buy a stolen phone without knowing "illegally" but pay for it legally with my card/cash doesn't matter.

Not only that but I can be arrested for dealing with stolen goods.

nullphreak - April 12, 2017, 10:18 am

Well actually it's not HF or Nanocore's fault.

Nanocore was cracked and being shared by criminals who were using it to attack/infect high profile companies with a lot of political/high profile influence and this is what caused the downfall of Nanocore.

The FBI said instead of spending millions of dollars maybe even billions trying to chase the international criminals we'll cut the head off the snake and go through it that way due to all the political pressure atm on the US government about recent hacking escapades such as the TOR attacks, you have to see things in the light of all parties involved.

The US government is under scrutiny because they won't detail the exploits they used to de-mask so many TOR users all at once including the Ross Ulbricht case, so instead of using (at that time) illegal hacking techniques due to the already increasing pressure they decided to go another route and that is to cut the head of the snake which hasn't really done anything wrong but by doing so all of it's current users (legit or illegitimate) may stop using the software as it's too hot to handle.

Each one of you have valid points but we all as a collective need to start looking beyond our own lives and realize we aren't the beginning nor are we the end of all this and future issues that arise.

Edit: also don't fuck with the rich as we as a collective, as people unless we stand as one can't really stand up to the heat/drama/profile of what they can bring down on our heads.

Well right there you are admitting to breaking the law. Unlawful access to a machine.

You can't pull out this 'oh i'm righteous because I use it against bad people' - it doesn't work like that.

EvilNerd - April 12, 2017, 10:40 am

(Apr 12, 2017 10:14 AM)Minimalist Wrote: [\[CITE\]](#) Absurd how you think that the quality of products being sold in a marketplace (or the lack thereof) dictate the forum's quality. We aren't involved in deals or deal disputes.Absolutely. The policy of enforcing quality in all product and post made HF what is today: the #1 hack/security forum.

Of course the decision of nanocore owner is not staff responsibility, but can damage the image and the business of HF: As I told, all the legal buyers of nanocore are left without service, all cracked version users are happy using it.

This is very bad for your business and for your image: this mean less and less people buying legitimate product and more and more using free or cracked one.

This also mean less legitimate transaction and less sticky thread.

Mr. Robot - April 12, 2017, 10:44 am

NOBODY CARES ABOUT STICKY THREADS !!!!

It's barely a dent in what the site generates as income, the stickies are there because they can be, the forum would do just fine without them.

It's not bad for the sites image, it's actually really good. Removing illegitimate software being used illegally is a great thing.

Yes you are a skid - I don't mean that in an offensive way but you are. This forum is not an illegal hacking platform to start your empire, this is a forum to learn about security in an open and positive way. Unfortunately too many people assume this is some fucking darknet destroy the government, fuck the police and hack the bank sort of place when it isn't.

(Apr 11, 2017 12:01 PM)EvilNerd Wrote: [\[CITE\]](#) I subscribed several hack sites, but browse and make deal only on HF.

Because I felt that the quality and integrity are something liked and enforced here: the policy of zero tolerance with LQP, warez, spam, trolling, scams and illegal activity paid: HF grows and become a place totally different

from the average "teen" hacking site

1) HF is not a 'hack site'.. Most blackhat activities are banned. Plus the owner openly assists police/investigators in searching for those who try to make this a 'hack site'

2) Zero tolerance for LQP and trolling?

[Take a look at some of Orgy's posts.](#)

[HQ Post from the owner himself](#)

In fact, go to the '[View New Posts](#)' section and browse through some threads.

(Apr 11, 2017 12:01 PM)EvilNerd Wrote: [\[CITE\]](#) meet competent and serious people and made deals without the fear of being scammed or infected.

Are we on the same forum? Huge scam reports get opened regularly here; I swear it's like every other week a nigga gets scammed for their group.

(Apr 11, 2017 12:01 PM)EvilNerd Wrote: [\[CITE\]](#) nanocore for me was an instrument of work. It wasn't that good tbh. ?

(Apr 11, 2017 12:01 PM)EvilNerd Wrote: [\[CITE\]](#) This is not my case: I've NEVER even considering mass spreading for getting thousands of "slaves".

Then you're wasting your time. ?

(Apr 11, 2017 12:01 PM)EvilNerd Wrote: [\[CITE\]](#) The otions for the owner of nanocore are:

1 run the server for more 1 week, so we can recover our clients with a more reliable rat or erase the server there.

2 create a tool that, run as a nanocore administator erase (deinstall) all the server as they tries a connection.

3 do nothing and debase the reputation of HF (hope of staff action in this case)

Personally if I were the owners, I'd restore the server and ban you.

(Apr 11, 2017 12:01 PM)EvilNerd Wrote: [\[CITE\]](#) This is also against the interests of HF admins: cracked software don't pay sticky.
Probably the smartest thing you said in the whole thread.

robwilliams464 - April 12, 2017, 12:48 pm

Look at some raw facts here:

1) Before you shut down someone for illegal activity, look at yourself honestly. Who doesn't use RATs for 'illegal' purposes? Why the heck would you be even creating RATs, if you really wanted to remotely administer a PC to which you have rights. There are multiple free software on the web (teamviewer, anydesk, ammyadmin etc).

So stop the hypocrisy.
I believe illegal is a grey shade act not a black/white. So long as you stay within limits of your own conscience and morals, you should be fine.

DaUB3R - April 12, 2017, 12:49 pm

(Apr 12, 2017 01:20 PM)\$lick Wrote: [\[CITE\]](#) When you get a 20% warning for posting popcorn gifs. Ok, just back to civil conversation?

I understand \$lick concern about the whole affair.
Of course when other people are raided for a software you are deemed responsible for, you have the right to cover your ass.
But shutting down the server without any warning you negate the same right to all your customers, people who have trusted you, paid for your software and respected the rules of HF don't dealing in cracked application

As I told before I have just some client. People out there have hundreds of clients who constantly ping their IP address. All those server software, left unattended is an evidence against us. Before or later their antivirus will find it and they will know to be spied.

I have no worries about "illegal" things, because I do not violate the law, but I'm somewhat worried about how the people I collect information about can react finding my server and my IP address (even if obscured).

I just ask you to run the server for 2-3 days more to allow us to access our clients, erase or updating the server software.

In alternative develop a forced update for nanocore that erase (uninstall) remotely the server.
The second alternative also is good for you if you are raided: you have the proof to have actively worked for erasing the malware in all the computers.

This also reinforce your legal defence about the legality of the software that you sold: "when I know that my legit software was used illegally I immediately I created an update that erase the server remotely."

"If someone are using this software maliciously they are obviously using a cracked version"

TheWarOwl - April 12, 2017, 3:19 pm

I don't use HF for hacking things anymore. Not to say that I'm interested in "slaves", but I used to be interested in digital security.

I'm mostly just here to program and learn looking at others source code :P

But yes, I would agree. A forum that doesn't allow me to protect my identity, yet involves plenty of legal issues doesn't really seem like a great place to use "controversial" products, not to say that half of the people here in trouble should even be in trouble. If Kali Linux was a paid product, yes it's fucked in every way to raid them and destroy the product there customers paid for. It's not feds say in who's innocent or guilty without evidence. Kali Linux is FREE. Arguably just as good as anything here as you can build a fully featured backdoor for any OS and get it 100% FUD. Why aren't their users being raided without a proper warrant?

For personal use I've just stuck with orcus, it's already been through the legal system and I'm pretty confident it won't be taken down anytime soon :P

Straight from the Horses mouth, so to speak....

Straight up, I do not understand how you people think the administrators of said products are going to take all the risks to protect your dumb asses while you try to breach and violate the agreements and intended use of said software.

Again, I have used this word so fucking often I am sick of typing it at this point.

But is Naive.

No one is willing to take hand cuffs and prison time for your dumb assed stunts and abuse of well designed and well intended software.

Your argument that we KNOW our customer base is based on malicious used, goes directly against many of my clients, who are small businesses and even law firms. So explain that malicious use then.....?

jobi - April 12, 2017, 3:48 pm

I understand a lot of people use rats on HF for personal and even illegal monitoring, however the eirs multiple rats here that low key overlook your activity.

Either way nanocore was very strict about legal use, so people shouldnt be complaining about evidence that should not exist if you followed the terms of use

If that was the case you could go buy any other rat with a "education purposes only" tos

EvilNerd - April 12, 2017, 3:54 pm

(Apr 12, 2017 03:36 PM)\$lick Wrote: [\[CITE\]](#) So you're complaining about not being able to break the law anymore? You have to prove that I broke the law.

I'm probably the most legit rat user here, since I only use in legal investigation instead of making hundreds of "slaves" like most of the user of your software.

I've asked for an application that REMOTELY ERASE the server, so I'm not interested in "breaking the law" or "mad about lose my slaves", just in cover my ass, like you are doing.

Just because you use it for a legal investigation doesn't give you the consent to remotely monitor anyone's device.

Police still need official consent/warrants to search private property. If they don't have that their search is illegal and any evidence found is deemed unusable.

Even if you're a private investigator, you have no right and what you claim you do is still illegal

Nice blank link.

If you were referring to the krebs article, it is well known.

I even made a [redirect](#) for it.

I was never in hiding nor am I a malware producer. You want the FACTUAL evidence, go do your research on my actual background, I spent over a decade defeating viral entities in corporate

infrastructures before I went to the Military.

I defeated Code Red and Green Worms before the AV vendors could issue a patch/DAT file for the fucking thing, by simply analyzing its behavior.

So everyone can call me a malware producer all they want, the fact of the matter is I am the exact opposite, and my track record stipulates that.

Look in to it if you doubt my own personal claims...

Then why the fuck bring up "evidence against us", evidence of what? Legal activities?

Are you really that fucking stupid?

EvilNerd - April 12, 2017, 6:04 pm

(Apr 12, 2017 05:22 PM)\$lick Wrote: [\[CITE\]](#) Then why the fuck bring up "evidence against us", evidence of what? Legal activities?

Are you really that fucking stupid? The thing I did are not illegal, at least are not the usual carding/spam made by teens. I work for legitimate investigative firm, that often works for lawyers.

My job is not very different than a detective: I have to find connection from people, hidden accounts... things that lately will be bring in a court of law.

I don't know what other people are doing, but this witch hunt about "illegal activity" on HF have to stop. Nobody buy a rat here for "remote assistance": anybody use teamviewer or similar products for this. not a RAT with hidden install, keylogger and password stealing who set off all antivirus.

A more appropriate concept is "reckless and widespread illegal activity who attract a lot of attention on the owner or on the forum".

I regret to have started this thread with all the shitstorm.

All I was asking is to run the nanocore 2 or 3 days more, to erase all tracks of my very polite and discrete activity. I think that all the other users out there are asking the same

Does Autism run in the family genome? (Honestly, I am curious)

RastaManKing - April 12, 2017, 9:56 pm

this op is so childish.. if you really had the job you say you have, you would be smarter than to open a thread like this

or at the very least you would use a disposable domain where it wouldn't matter if something like

this happens..

and after you realize we dont eat your bullshit you start flaming on everyone.. there ARE legal use for RATS and there

ARE people here using them legally, not like your self, i work at a children's museum and we used nanocore to perform tasks on the museums computers instead of running around the installations to perform such tasks.

nanocore gets takendown, so now we walk through the installations to manually remove nanocore, no big deal at all..

why use nanocore? 25dlls for a license is very easy to get approved.. we are waiting for another aproval to buy another administration tool,

but after having one already, the second aproval might take alittle while..

its my humble opinion that this thread should be closed, its just cancerous..

Nice Clover. ?

Kuso - April 12, 2017, 10:09 pm

Never. Trust. Anyone.

If you make a deal or look for a service. Always checked the sources, don't treat it like giving your trust to someone and it will be all fine. Shit is meant to happen.

Crypting despite being able to setup a whitelist.

Brace your illegality like I did.

proves nothing, i also have IM and LL license that i bought my self, not for museum use, i bought some bruteforcer too because i like seeing different software, i have a copy of all the free rats on my pc, yet dont use them on the museum for legal reasons, we need some type of license to use even if

the software is free(or on my personal pcs since i have paid licenses for my self), and starcrypter is not the only crypter i have, i have some other tools and a plethora of sources(RAT,Keyloggers,binders,crypters, you name it, and all of this found on github) just because i am a digital accumulator, and nothing of this is illegal,

Armada - April 12, 2017, 11:21 pm

Well really I am wondering.. being I never actually violated TOS, and the project is up for sale, do I get a discount being a nano licensee?? lol

You're still trying to make it sound legit.

We know it's not. There is not a single legitimate use of a crypter in a controlled enviroment like a museum.

The only excuse you'll see for using a crypter is reverse engeneering, but we all know that's not going to happen in a museum.

Not to mention the 'binding' part, what are you binding to it? A .doc on dinosaurs..?

Spoiler [\(Click to View\)](#)

'The crypter is for personal non malicious use at home'.

Right so you're crypting your binaries to do what with.. Just sit there on your desktop? ?

Why would a crypter have any use regarding reverse engineering? Maybe I misunderstood?

Twistd - April 13, 2017, 8:57 am

(Apr 13, 2017 08:28 AM)LInks Wrote: [\[CITE\]](#) A crypter would make it harder to reverse engineer the program.

Not really. You don't use a crypter to protect a program, a crypters main objective is not to protect software from reversing. A crypter is mainly used to disguise and camouflage it's execution or

hidden content. A protector on the other hand is used to protect from reverse engineering but this is not the "same" as a crypter.

(Apr 13, 2017 08:29 AM)Friedrich Nietzsche Wrote: [\[CITE\]](#) A protector is different from a crypter. Crypters uses RunPE which allows you to dump and fix the imports in under 1 minute. Get your facts straight.

Gotta love this guy. At least someone knows what they're talking about here :)

this is too funny.. i never said i use the crypter at the museum, witch i dont, you are automatically asuming that out of your ignorance, i dont even use it on my computer, i just have a crypter, swallow it and accept it(actually more than one, plus sources too) it does not mean nothing, that crypter post is one of the first post i made on here, you guys are stupid and applying the same logic you apply to RATS witch is wrong, and packers/obfuscators are different from crypters, i also have packers and obfuscators and i dont obfuscate the code i write, so what is the big deal? we will get another license aproved, and when we do, another administration tool from here will be used on the museum, like it or not, it does not matter what software i have on my personal computer, my personal computer and the museums computers are two very different things.. LL and IM can check my account status and will see that i never log into those softwares, last time i did was just to accept the new updates pushed so crucify me now, i dont have any clients and the most i've had is one, my second pc and for a very short time only(while testing), i also had nanocore on my pc and another licensed nanocore on the museum's pc, i never used my nano at the museum,in fact my personal pc stays at home, is that illegal to you also?

Purple Kief - April 13, 2017, 12:08 pm

So you write code.. But you don't understand what file you need to bind using a file binder?

Seems legit to me. ?

i do write code(not malware), and the problem i had was that i didnt get the link to the stub for the crypter, thats why i could not find the "stub" the crypter was asking for, i was interested in crypters at the time just for the fucks of it, thats why i have many sources of crypters also, i read them and went

through them now i can write a software that will aes a file, but i still dont get the memory injection part for now, i have rats and keylogger sources but will not write a rat or a keylogger, i just wanted to see the source of some to see the basics of their working, i have the sharex source also just because i want to see the code of that great tool with so many features, i also have the sources of dnspy and exeinfope out of curiosity, i mostly write simple database connections and currently am doing a unity3d projects for the museum.. having rats, keyloggers, and even crypters is NOT illegal in my country(sources OR compiled), so i will never get tired of defending my points of view against people who think that having anything that i have must be illegal because i do illegal shit, its NOT illegal and im NOT doing illegal shit, purple keif or not your logic is wrong..

Don't you live in mexico? That makes all of this a big bit of bullshit as Mexico are part of the 21 countries part of APEC.

Maybe go learn your laws.

Other than that from what I can see chill out, I can tell you are older than most of the kids on here and actually do come to learn and that's perfectly ok. I appreciate you coming here and respecting the place.

well i still dont see how the Asia-Pacific Economic Cooperation applies here since im not doing any distribution, selling, or anything economic related here (and if i ever develop something, most likely it will be opensource, im a big opensource supporter) but yes, i chill out now ?

now lets just let this thread die ?

This is probably the most important part,

<http://www.wipo.int/wipolex/en/details.jsp?id=7918>

It looks at and revolves around the involvement in following federal laws in place by the US government so anything illegal there is illegal in Mexico.

Yes Trump might want to build a wall but it doesn't mean Mexico can refuse to extradite and keep IP related crime.

31 UST 5059

<http://www.mcnabbassociates.com/Mexico%20International%20Extradition%20Treaty%20with%20the%20United%20States.pdf>

That means anything you do in Mexico as far as internet crime is federal and they can organize your arrest the same as if you were an American citizen.

From that we can see if they are targeting users of software, developers of software or sellers of software and it seems you own 3+ paid RATs in which you probably assumed you could pay for "legally" using paypal or other funds.

Unfortunately in the eyes of the law it's not that simple and an investigation can still be launched. Stay safe.

robwilliams464 - April 15, 2017, 10:49 am

I salute the amount of hypocrisy in this thread. well done guys

granted that sir.. thank you for the information..

i do have paid software from here and i did paid legally for them

i am not hiding and never will, i am just a google search away..

and you are definitely right, i will be prosecuted and processed quickly

if i misbehave.. ?

milandvb007 - April 15, 2017, 11:21 am

It was one of the bests RAT's I've ever orcus remote is the best had the honor of using
