Thread: [Need Help Dark Comet Rat](#)

empras - April 11, 2017, 3:43 pm

I know how to make a port. I have done that and everything with Dark Comet. But, everytime someone clicks on my RAT it does not work. I did everything right. My router is ARRIS and I think that something is blocking the connection of the port but I do not know. Please help!

Hello there, try to create a new "listen to port" and there will be an option with something like UpnP. Check that. Then go to [canyouseeme.org](#)

Put the same port t you wanted to open and it should portforward automatically.

Also your friends pc/av could be blocking the internet conection i think.

golden advice;

dont use darkcomet
use njrat

Its better to buy Imminent Monitor Or Other RAT Paid license, not cost u more then 25\$ that will really work and fast

SIM-2059193 - April 11, 2017, 5:11 pm

anything above windows 7 won't work regardless of if you had any errors. It's officaily broken for 10+

xJobson - April 11, 2017, 6:16 pm

Dont use it. Thats the best help your gonna get :) Check out njrat or invest in one lad <3

ZwntanosNekros - April 12, 2017, 5:41 am

Try to disable the firewall.

Zenomhunter - April 12, 2017, 5:42 am

Check your firewall rules, it could also be a crypter you are using, or a dynamic ip...

post a preview on porn sites and title it with your name LOL, works pretty well

The Unknown Coder - April 12, 2017, 6:33 am

Make sure, the dns is pointing to your IP. If you know how to forward the port you can check that on canyouseeme if its opened. Make sure you are listening on the DC also. And that your firewall is off.

onsomeshiz - April 17, 2017, 3:35 am

If your having issues with your ports my guess is you don't have a static IP, you should resort to using a VPN and port forward through that you should use a VPN anyway especially if your rating, also DONT use DC there's tons of new stuff out DC is outdated and there are no OG copies most are tampered with and infected!
