Thread: [Should I use a free RAT or buy one?](#)

Sigma - April 12, 2017, 3:56 pm

If you think I should use a free one, let me know which one and if you think I should buy one, do the same. Thanks everyone.

Armada - April 12, 2017, 4:26 pm

What is your intended purpose?

HDinis09 - April 12, 2017, 4:41 pm

Usually paid software is better

#Skyline - April 12, 2017, 6:34 pm

Use a free RAT.
Either Babylon or Quasar.

SIM-2053312 - April 12, 2017, 6:36 pm

If you're planning to use the software illegally I would recommend Netwire. HF rats can be used for illegal use but your license will be banned when there are reports

Augusto Pinochet - April 12, 2017, 6:46 pm

Illegal usage - njRAT.
njRAT is my favorite free RAT.

Legal usage - Orcus (Paid).

TOM - April 12, 2017, 9:39 pm

IT depends on you're Intention If your Looking to use the Product for legal Purpose Purchase Orcus Or SilentBytes

aerohacker - April 14, 2017, 1:40 pm

What is considered "illegal use?"

I intend to buy some RATs and I have this doubt.

Things that I will do:

- Only scan with VirusScanners that don't distribute the samples
- Remote Desktop
- Hidden RDP
- Copy another RATs servers
- Copy files
- Copy passwords

Basically only to spy... well I know that all these activities may be considered illegal, but I think most people who buy RATs have that intention, so they would have more or less harmful activity, shall we say?

Things that I won't do:

- Scan on Virtustotal or another Malware scan that distribute samples
- Spread virus
- Format
- DOS
- DDOS
- Bitcoin
- Any crime

LOL!

Is this what HF has come to?

Its never changed....

yotoprules - April 14, 2017, 5:02 pm

Use a free one like Revenge RAT, at that is extremely stable and has a lot of features, if it's not enough though, buy either Luminosity Link, Imminent Monitor, or Orcus (only buy these for legal purposes or you will get banned)

Infinity™ - April 14, 2017, 5:19 pm

I would suggest you to look on [QuasarRAT](#) for a free one and for paid RAT use Orcus for legal purposes.

I also used SilentBytes (still in beta) and it works great on me.

iUpgrade - April 14, 2017, 8:24 pm

Use Quasar for your purpose, it has got everything you need, stable and free...the best part nobody will terminate your license :P.

TroLLeX_ - April 16, 2017, 6:59 pm

(Apr 14, 2017 02:18 PM)Armada Wrote: [\[CITE\]](#) Its never changed....Haahaa makes me lough a lot.

So every stable rat could be used for your purposes. And if its Illegal, i hope you have good ethical reason todo that kind of stuff.

I would prefer NjRat. i Love that good looking and small sticky thingy.

Or you just writing yourself a small Backdoor which only installs himself and asks for instructions from a webserver's file. A small 100Lines Script. Easy Peasy Lemon Squeazy.

mastermsi - April 19, 2017, 10:09 am

Interesting post makes me think a lot

Autowall - April 19, 2017, 10:11 am

I bet that you cant do any of that.

What are you talking about?

react - April 27, 2017, 4:27 pm

njRat is my shit. Nobody will terminate your license if they deem your activity with it illegal/illegitimate, it is reasonably stable and free!

I know its a little bit old thread,
but what do you meaning by reports?

roosterbabe36 - *July 31, 2017, 7:25 pm*

Better use it for legal purpose. Developers create them for good purposes, anything goes wrong and licenses are banned. For free rat, again it depends on your intentions. Better not use obsolete ones.
