Thread: [How can I hack a web page and modify it as I want](#)

Alejo 11 - April 12, 2017, 6:26 pm

Hello guys as I can hack any web page and modify it to my liking I tried a few methods but none of the ones I have done help me pls help

Alterations - April 12, 2017, 6:28 pm

1. find vulnerability
 2. get access to admin panel
 3. upload shell
 4. cover your tracks
- done.

Ninetales. - April 12, 2017, 6:32 pm

Right click -> Inspect Element -> Find the item you want to modify -> Right click -> "Edit" -> Change to what you want hacked -> ??? -> Profit!!

search for sql vulnerabilities.

s1r_n0z - April 12, 2017, 7:45 pm

No other way around finding a vulnerability, exploit it the use admin rights for changes.

Shutogan - June 12, 2017, 12:57 am

Best way to do it if you are totally newbie , watch few videos on Burp suite and then run burp suite to scan the site and find vulnerabilities and then exploit it. Or brute force it by using wordlist, but first find their log in policy.
