Thread: [Forbidden Error Glitch](#)

~Rexon - April 15, 2017, 7:59 am

Not sure if this is something on my end but when I search the member list for the username "Click" and go onto the second page. No matter what profile I click on I get "[403 Forbidden Error] - Access Denied"

Even if I try to go back to hackforums.net or go back and try to go another page it will give me the same error. I tried on another web browser as well and the same thing happens.

Does this occur for anyone else?

Wait 30 minutes and see if the issue persists. You probably triggered a firewall block.

Oh ok thank you. Have you tried exactly what I did? Does it give you an error?

This is legit. just tried it, I can't visit anything now.

NurSpec - April 15, 2017, 8:23 am

I saw someone with a similar problem the other day. Definitely not on your end.

VirtualFrost - April 16, 2017, 12:43 am

Tried searching Click, if you go to the third page I also received the 403 Forbidden page, that's odd.

EDIT: I did the search again to test clicking profiles, also gave me the error and when I clicked back and then the homepage, the homepage started giving me the 403 Forbidden page too. Closed the tab and reopened and it was all fine.

Exact same problem for me. Strange how other usernames are fine. I tried "rope" for example which also has three pages and that worked fine. Also other words such as "spam" "image" etc. they're all fine as well.

Do you have any user scripts or anything?

Nope no user scripts.

FamousHater - April 16, 2017, 2:31 pm

its something on Hackforums side as i get the issue as well as other members have told me the same thing
