Thread: [HF API Beta Released](#)

Omniscient - April 21, 2017, 7:47 pm

Well, it's now live. Thanks goes to Meshcollider that started the coding and did 90% of the hard work on this.

The API is READ ONLY but plans to have WRITE access (posting and sending PMs) will be done in the future.

API is currently only for R3KT group members and API limit is 100 calls in an hour.

Please be aware, your API KEY can provide direct account view access. Do not share your key please. At this time keys cannot be used to alter accounts in any way so in that regard you are safe. But we have not written in high-end credentials so things like reading your PMs is possible simply with the API KEY.

All API calls are logged including the IP. Abuse of the API may lead to action against your account. So please, don't abuse.

If you find security bugs please PM me directly, but generally speaking regular output bugs and questions you are free to post in this thread.

We currently have two unofficial tutorials to help you get started.

xadamxk tutorial:

<https://hackforums.net/showthread.php?tid=5605178&pid=54653909#pid54653909>

Meshcollider tutorial:

<https://hackforums.net/showthread.php?tid=5605411>

All API output is in JSON format. The true intent of the API is for future mobile application use and development. By creating this API it is now possible to begin another layer of development for mobile apps. I hope that's as exciting for you to read as it is for me.

Eventually a developer will be able to create an app where you enter your API key and you'll have a functioning HF Mobile App. Because this is an API it means that ANYONE can essentially build applications not only for mobile but also desktops and even other websites. This opens up a HUGE range of things possible going forward.

I hope everyone enjoys this. It is a beta so please be forgiving, help us debug, and provide us helpful feedback.

Thank you.

EDIT: LOL, forgot a link to start your API usage. <https://hackforums.net/apikey.php> (Key Gen Page) <https://hackforums.net/apicall.php> (API Call Page)

Charger - April 21, 2017, 7:49 pm

I can't wait for it to be released for ub3r.

Hopefully people don't abuse it and ruin it for everyone.

Zexo - April 21, 2017, 7:51 pm

I will prob try it out eventually not sure how much I will use it but I guess once i use it I will find out.

?now - April 21, 2017, 7:52 pm

So this will allow members to send like automated PMs correct?

Charger - April 21, 2017, 7:53 pm

(Apr 21, 2017 07:50 PM)King of Hearts Wrote: [\[CITE\]](#) Using a basic curl get is blocking me. Does the firewall require specific headers or proper useragents to be sent?

Edit: Yes, just setting a proper user agent fixes the firewall block.Will the data center bans be lifted for API calls?

Ninetales. - April 21, 2017, 7:55 pm

Yes! Love being R3kt. Gonna see what i can put to use with the API, Tysm!

V For Vendetta. - April 21, 2017, 7:59 pm

Time to use this. Thank you Omni! :)

Gigabear - April 21, 2017, 8:04 pm

Oh omni give me a fresh batch of your finest cubs!

Omniscient - April 21, 2017, 8:05 pm

Quote:Will the data center bans be lifted for API calls?

Not immediately but it will be considered. I may also run this through a tunnel service which would allow for extra security as well as datacenter usage.

So the calls may actually go to randomurl.com/api.php then forwarded to HF through the tunnel that's whitelisted and results can be sent that way.

Honestly forgot about this problem for the API...ugh. It's fixable.

Charger - April 21, 2017, 8:06 pm

(Apr 21, 2017 08:05 PM)Omniscient Wrote: [\[CITE\]](#) Not immediately but it will be considered. I may also run this through a tunnel service which would allow for extra security as well as datacenter usage.

Honestly forgot about this problem for the API...ugh. It's fixable.

Sorry for the extra headache. The tunnel seems the easiest. It could even be like API.hackforums.net for simplicity or something.

Good luck.

Cryptic™ - April 21, 2017, 8:06 pm

Glad to see its finally released. I don't really have any use for this but am excited to see what people do with it.

Omniscient - April 21, 2017, 8:08 pm

Quote: It could even be like API.hackforums.net for simplicity or something.
Exactly what I was thinking. Allows more security too for things like rate limiting.

Grizzlies - April 21, 2017, 8:32 pm

Gotchu!

And this sounds so amazing, take advantage boys ?

Cryptic™ - April 21, 2017, 8:36 pm

(Apr 21, 2017 08:29 PM)xadamxk Wrote: [\[CITE\]](#) I need some PM's to test for my push notifications - pm me please guys! :D
I just dropped a bomb on ya.

Enjoy m8

p.s. theres a subliminal message

ZuGgY - April 21, 2017, 8:44 pm

Sounds great!

Quote:The true intent of the API is for future mobile application use and development
Oooh la la, a mobile app I hear?

Bluffer - April 21, 2017, 8:48 pm

I'm excited to see what kind of stuff members can come up with! Great addition to the site.

SIM-2015410 - April 21, 2017, 8:52 pm

(Apr 21, 2017 08:44 PM)ZuGgY Wrote: [\[CITE\]](#) Sounds great!

Oooh la la, a mobile app I hear?

Yep mobile app is a huge focus of this API, hopefully someone will take some initiative and get one started for us ?

findingnature - April 21, 2017, 8:55 pm

I'm honestly kind of confused about what this is exactly... anyone care to explain?

Cryptic™ - April 21, 2017, 9:02 pm

(Apr 21, 2017 09:00 PM)xadamxk Wrote: [\[CITE\]](#) With an API, you can pull data from Hack forums.
I used the API to check my in PM inbox for unread messages and send info of the unread messages to my phone via a push notifications:

Whats the benefit of a push notification over my gmail hf pm received email notification

illuminati? - April 21, 2017, 9:03 pm

(Apr 21, 2017 09:02 PM)Cryptic™ Wrote: [\[CITE\]](#) Whats the benefit of a push notification over my gmail hf pm received email notification
Not everyone checks their email though.

iKinky - April 21, 2017, 9:06 pm

(Apr 21, 2017 09:02 PM)Cryptic™ Wrote: [\[CITE\]](#) Whats the benefit of a push notification over my gmail hf pm received email notification

It has way more potential than a push notification on your lockscreen. hf app and or variations of apps for HF. I was messing around looking to create an app for market users specifically, but there is a lot that goes into that

SIM-2015410 - April 21, 2017, 9:19 pm

(Apr 21, 2017 09:07 PM)xadamxk Wrote: [\[CITE\]](#) @Omni, if I changed my userscripts to work through the API rather than grabbing data, would you feel better about them? Or still no?

Since the requests would still be limited by the max hourly call limit, I would assume Omni would be okay with that, but I'm sure he will confirm either way

Leroy Jethro Gibbs - April 21, 2017, 9:53 pm

Shit. This only makes me want my damn internet back more. Is this going to be rekt only or will it be for ub3r's too? I'm super excited to make something useless with this API. (Useless because I can't program for shit)

SIM-2015410 - April 21, 2017, 9:54 pm

(Apr 21, 2017 09:50 PM)xadamxk Wrote: [\[CITE\]](#) @Omni, will rep be accessible via the API? Unlikely I would imagine

As I mentioned [Here](#)

(Apr 21, 2017 07:30 PM)MeshCollider Wrote: [\[CITE\]](#) The features are currently only available to R3KT members, but will be available to UB3R members after beta testing is complete.

Leroy Jethro Gibbs - April 21, 2017, 9:56 pm

(Apr 21, 2017 09:54 PM)MeshCollider Wrote: [\[CITE\]](#) Unlikely I would imagine

As I mentioned [Here](#)

Only \$9.99. Gang rep with ease with this new method! No refunds for repkills.

I see as if the rep could easily be abused. I feel like if that was to be added, it should be for rekt members only. Just my thought though.

Truth - April 21, 2017, 9:57 pm

can we access if a member is online or not?

Great update omni, R3kt are so lucky lol

Leroy Jethro Gibbs - April 21, 2017, 10:03 pm

(Apr 21, 2017 09:58 PM)xadamxk Wrote: [\[CITE\]](#) No difference, you'd still need multiple accounts to abuse the feature.

No different than signing into them and doing it manually.

Only abuse I could see would either be scraping info from them or using it to generate a level for marketplace deals/alerts - which I know Omni isn't a fan of.

Not yet and I doubt that would be added.

I still feel as if it could possibly be abused by someone. Maybe not by means of sale but maybe a group of people intentionally create an app for just this, then all of them use their API keys and store

it in a database. When the time comes, they enter in a rep comment and a value then add a persons UID and clicks send. You might not initially think its an issue but consider the number of accounts that have the possibility of being hacked or that have been hacked I should say. If someone have access to all of the accounts and builds such an app, they wouldn't be concerned about the data of the accounts, only the damage they could do with them.

Thats an idea that I feel could be used maliciously but honestly, I do believe it to be highly unlikely. This could be good in other ways I guess. I'm only seeing the bad though. I'm tired which doesn't help.

Enzio - April 21, 2017, 10:12 pm

Sounds cool and all but what exactly is this?

Anyone care to explain me the advantages and utility of this?

Enzio - April 21, 2017, 10:16 pm

(Apr 21, 2017 10:13 PM)xadamxk Wrote: [\[CITE\]](#) Using the API, you can pull data (sections, threads, posts, users, etc) from HF and use the data in a mobile app or in your own application.

IE an app to alert you when you have an unread PM
I see. Quite interesting. Thanks.

Leroy Jethro Gibbs - April 21, 2017, 10:16 pm

(Apr 21, 2017 10:09 PM)xadamxk Wrote: [\[CITE\]](#) Ehh. That's a threat regardless of rep ability or not. Honestly farming rep is nothing compared to the ability to post/pm on someone else's behalf. Scammers, etc
Yeah your right.

(Apr 21, 2017 10:13 PM)xadamxk Wrote: [\[CITE\]](#) Using the API, you can pull data (sections, threads, posts, users, etc) from HF and use the data in a mobile app or in your own application.

IE an app to alert you when you have an unread PM
I would like to see an android app that sends me push notifications for PM's then lets me quick reply. That would be fucking amazing in my opinion.

SIM-2015410 - April 21, 2017, 10:17 pm

(Apr 21, 2017 09:57 PM)TryAgain Wrote: [\[CITE\]](#) can we access if a member is online or not?

Great update omni, R3kt are so lucky lol
What exactly is the point of that? You can do so by looking at the last online time available through the user profile method, and checking if it was within the last 5 minutes if you want to

Omniscient - April 21, 2017, 10:18 pm

Quote:@Omni, will rep be accessible via the API?

Probably. Eventually I hope all of HF's main basic functions to be API available so that complete mobile apps can be created.

Quote:can we access if a member is online or not?

It's not something that would added to current API calls. It's just not vital information required for a mobile app to work effectively. But maybe I just need to think on it more.

Quote:No difference, you'd still need multiple accounts to abuse the feature.
No different than signing into them and doing it manually.

Agreed.

Quote:Only abuse I could see would either be scraping info
Harder to do when you can restrict the number of API calls.

And anything can be abused but that doesn't alter the fact we really need this API.

Trust Scan output will be part of the next update (next week) and keep in mind that we plan on a full permission system for the keys as well as IP locking. Even multiple keys per account will likely happen. So you could potentially give your mobile app a key as well something else. I imagine that having your API Key IP locked would make for a good entry into the Trust Scan.

NurSpec - April 21, 2017, 10:20 pm

This is incredible, looks like everything is really coming together! I cannot wait to be able to use it.

Leroy Jethro Gibbs - April 21, 2017, 10:20 pm

Omniscient Wrote:Trust Scan output will be part of the next update (next week) and keep in mind that we plan on a full permission system for the keys as well as IP locking. Even multiple keys per account will likely happen. So you could potentially give your mobile app a key as well something else. I imagine that having your API Key IP locked would make for a good entry into the Trust Scan. Would it be possible to add an IP range for those with dynamic IP's? It would be nice to just add my ISP's ranges and block others.

(Apr 21, 2017 10:19 PM)xadamxk Wrote: [\[CITE\]](#) For the last 2 weeks I've been looking into a system for push notifications and quick replies like that. Since we only have read access, I can only get as far as sending a Notificafion with the PM title and who it's from. And when you open the notification, it opens a link in chrome.

Until we get write access, that's the best that'll happen.

Sounds like a great start nonetheless. Let me know how that works man. I'm definitely interested.

#Skyline - April 21, 2017, 10:21 pm

I cannot wait to use this.

So many useful things I can achieve.

You did a good job Mesh !

Leroy Jethro Gibbs - April 21, 2017, 10:40 pm

(Apr 21, 2017 10:37 PM)xadamxk Wrote: [\[CITE\]](#) Damn, you've put a lot of thought into this. I like it. I'm right there with you though, I think the HF API is the next big jump for HF.

Would you consider implementing application Keys as well?

That way if a certain application was deemed harmful, rather than put out a warning and hope people don't use it, you simply kill that app ID?

Wouldn't you need to completely change the way the API works though? Or no? I'm not very good at these things so most of these questions are for me to learn from.

iKinky - April 21, 2017, 10:50 pm

(Apr 21, 2017 09:07 PM)xadamxk Wrote: [\[CITE\]](#) Me too. And a lot of money.

I may try it for a summer project.

But I'm not a pro at app development.

@Omni, if I changed my userscripts to work through the API rather than grabbing data, would you feel better about them? Or still no?

I assume you're using swift? I still have my old OP3 so I was using java, but I kept getting weird errors.. i'm probs gonna try some shit for iPhones tonight.

(Apr 21, 2017 10:17 PM)MeshCollider Wrote: [\[CITE\]](#) What exactly is the point of that? You can do so by looking at the last online time available through the user profile method, and checking if it was within the last 5 minutes if you want to

kind of pointless, but you could create an hf messenger. see who's online and whatnot. i feel like you'd have to be really busy or important to have a consistent use for that lol

Mr. Robot - April 21, 2017, 11:01 pm

That's fucking sick mate, I hope you can sit down and have a nice cigar and a bottle of scotch/whiskey and be proud of the work you lot have done.

Well done to Mesh and xadamxk as well as yourself Omni. Huge thumbs up.

One thing I would like to ask is if we can have an example api key, one that doesn't work to get an idea of the length+numerations used. I trust you would have all made it secure, just curious at this point in time.

Leroy Jethro Gibbs - April 21, 2017, 11:03 pm

Is there an IP time out on combination attempts? 15 characters is reasonably long with 26 + 10 digits with all randomized or is there a pattern of

d=digit

l=letter

I also see some capitals in there so do you mean Ualpha?

SIM-2015410 - April 21, 2017, 11:50 pm

I said it was case sensitive, capitals and lower case letters are different in the API's eyes. $26+26+10$ possible characters so number of keys is 62^{15} is roughly $7.689e26$ possible keys

I hope you aren't planning on bruteforcing API keys ?

Fortunate - April 22, 2017, 2:08 am

I can't wait to use this, looks awesome!

Mr. Robot - April 22, 2017, 2:29 am

(Apr 21, 2017 11:50 PM)MeshCollider Wrote: [\[CITE\]](#) I said it was case sensitive, capitals and lower case letters are different in the API's eyes. $26+26+10$ possible characters so number of keys is 62^{15} is roughly $7.689e26$ possible keys

Yes you only stated case sensitive not that it was both character sets. 2 different things sorry mate. Just saying that it's case sensitive means it either has to be one or the other so you cant turn GAS123 into gas123.

I don't plan on bruteforcing keys however the question was around if it were possible which it seems it is.

M?xim - April 22, 2017, 7:21 am

Congratulations Omni. Good job as well to Mesh, Zach and Adam (for that post). Nice with users who contribute this much.

Khamul - April 22, 2017, 7:45 am

Can't wait for this, made a suggestion about access to API keys for members:
<https://hackforums.net/showthread.php?tid=5605685>

Vitani - April 22, 2017, 8:31 am

This is actually awesome! I was kinda hoping you would still release it this week and you actually did!

Right now I am working on an app using this, I will post back once I am done.

F?cgle?? - April 22, 2017, 9:21 am

Will the call limit eventually be increased? If so will it require paying some kind of fee?

SkullTraill - April 22, 2017, 9:26 am

Nice, finally. I'm no programmer, but I have some interesting ideas that I'm going to develop and get others to refine.

Xeenon - April 22, 2017, 11:23 am

I wonder if, once this gets opened up to the rest of us, we can use APIs from other sites to work with HF. That way, we could have currency exchange threads be automatically updated with the current BTC price by using the Coinbase API. We could automate so much on here.

Release it for Ub3rs soon, so I can play with it. ?

ASLR - April 22, 2017, 11:42 am

I'm really interested in contributing to the project by making an open source java library for interacting with the API. Then other projects wouldn't have to reinvent the wheel every time and

have to screw with making the actual requests and all that

F?cqle?? - April 22, 2017, 11:43 am

(Apr 22, 2017 11:42 AM)ASLR Wrote: [\[CITE\]](#) I'm really interested in contributing to the project by making an open source java library for interacting with the API. (Apr 22, 2017 11:44 AM)ASLR Wrote: [\[CITE\]](#) I'm not rekt though T_T
I feel your pain. I'm also patiently waiting for the beta to be over. Nonetheless it would be nice to have a library for it after we're able to use it.

ASLR - April 22, 2017, 11:47 am

(Apr 22, 2017 11:46 AM)F?cqle?? Wrote: [\[CITE\]](#) I feel your pain. I'm also patiently waiting for the beta to be over. Nonetheless it would be nice to have a library for it after we're able to use it.
I suppose I could go ahead and get started based on the information available in the usage guides.

Charger - April 22, 2017, 11:49 am

I can't wait to use this. I've already started brain storming ideas to benefit the community and myself. I'll mainly be using the user API.

ASLR - April 22, 2017, 12:24 pm

API client project started:

<https://github.com/ASLR0/hf4j>

I'll work on that as I have time

Omni let me know if you have any issue with me using the maven coordinates
groupId: net.hackforums
artifactId: api-client

Omniscient - April 22, 2017, 1:28 pm

This API is going to separate the men from the boys. The real hackers vs the skids. The coders from the script kiddies.

I want to note that we're building this API from the ground up. It was not part an existing library or class. It's being designed and coded from scratch. That's just something I am particularly proud of.

Mesh of course is doing the lion share of the labor along with my guidance, bug fixing, and feature planning requirements. Between the two of us I hope to make this one of the greatest API's for any website let alone a web forum. I have high expectations for the API.

I know everyone has a lot of questions right now. I'll try to get them all answered. Please do show some patience and know that we're listening to feedback.

Thanks.

SIM-1847363 - April 22, 2017, 1:29 pm

Take your time, I and many people trust you and the dev team to make the API great.

Silent - April 22, 2017, 1:29 pm

Wow this is amazing!

Mabye one day we will see a HF app on the app store :)

PrivateDonut - April 22, 2017, 1:34 pm

I'm hyped with the API release, it already sounds pretty amazing. Looking forward to future updates!

M?xim - April 22, 2017, 1:36 pm

Why did i feel like this sentence hurt me.

oh right, fak.

tcsh - April 23, 2017, 5:51 am

Peculiarly curios news, it definitely has an almost no limit potential in regards to what you can create with it.

So will the API work based on HTTP calls like GET and POST and so forth? I'm not that knowledgeable in how APIs work / are written but the few I've interacted with (in relation to websites and forums) and have incorporated in my desktop apps, they used HTTP calls. If so, I'm guessing you will release, sooner or later, a documentation for it, right? :)

M?xim - April 23, 2017, 6:57 am

Hopefully the API will be out for ub3rs soon. Would love to put it to use.

PrivateDonut - April 23, 2017, 6:59 am

Omniscient - April 24, 2017, 11:33 am

Quote:@Mesh or Omni, can we get a call to get a username from a UID? or multiple UIDs? UID and UIDS (comma seperated multiples) will get it. You should know that given you wrote one of the tutorials.

Quote:It could be tricky (depending how people use the app) seeing as you can only make 100 calls per hour.

Currently just in beta this is the limit but any push notifications timing should be set to once per minute which is more than enough to give reasonable notification and stay within the limits. I'd say once the beta is over we'll have higher limits to maybe 240 per hour which means you'd be able to make a call once every 15 seconds. Devs keys might get higher limits.

Khamul - April 24, 2017, 11:42 am

(Apr 24, 2017 11:33 AM)Omniscient Wrote: [\[CITE\]](#) Currently just in beta this is the limit but any push notifications timing should be set to once per minute which is more than enough to give reasonable notification and stay within the limits. (Apr 24, 2017 02:48 PM)MeshCollider Wrote: [\[CITE\]](#) Isn't that literally what we are just talking about lol

It doesn't appear to be the same question. The other guy was asking about a call to get a UID from a username, which implies an exact 1 to 1 match. "Username search API" implies a list of possible matches similar to the search functionality on the members page.

Also a question, according to the xadamxk API usage post, the tid call returns a response object with the field

Code replies: "4, 6, 7, 9"

Can you clarify if the thread post id's are actually a comma delimited string, and if so, why did you choose this over a JSON array?

SIM-2015410 - April 24, 2017, 5:43 pm

Another question, I assume all requests are to be made in GET? Any plans to employ REST?

Chingonazo Gomez - April 25, 2017, 12:36 pm

Can't wait to see this :)

Omniscient - April 25, 2017, 1:05 pm

(Apr 25, 2017 11:23 AM)DevNet Wrote: [\[CITE\]](#) Another question, I assume all requests are to be made in GET? Any plans to employ REST?

Realistically there is almost no difference from how our API functions with that of any RESTful architecture.

What's going on with the API is that it's actually more of a direct interface with MyBB.

If I was to utilize REST I'd have to make seriously deep changes to how our backend works. What may seem simpler for you may end being a nightmare for me.

But I am open to discussing this the possibility. With REST you'll want to run the PUT and DELETE not just GET and POST.

I'm starting to see some problems we may have going to the next level with the API. Hopefully we can come up with solutions.

Charger - April 25, 2017, 2:40 pm

(Apr 25, 2017 02:25 PM)xadamxk Wrote: [\[CITE\]](#) Omni can you make a section for API content? My guide is almost done.

ScorpionOfWar - April 30, 2017, 1:31 am

This could be really interesting for a discord verification bot

SIM-1866423 - April 30, 2017, 3:08 am

Omni, "All API calls are logged including the IP" this will be remain after release for others or just temporary security system against abuse ?

M?xim - April 30, 2017, 9:30 am

Got some questions, keep in mind that i have no idea how API works.

I am selling a software here on the forum and the process is automated by a thirdparty site; that means that you'll get the license and instructions over email after the payment is completed.

How will i be able to benefit from the API as a seller? I have my webdev who can take care of my requests, all i need to know if what is possible.

Right now, that i have in mind is to be able to verify users when they purchase. That means that i will know which HF user purchased when. Is there anything else than that? Will i be able to delivery their license and such over PM which would be awesome to add, considering that i can provide one-on-one support whenever they need it.

Thanks

M?xim - April 30, 2017, 9:56 am

(Apr 30, 2017 09:46 AM)xadamxk Wrote: [\[CITE\]](#) The API is read only right now. So you can't do much with it yet.

Think that the API is in beta stage so it's not worth doing anything major with it yet. I obviously meant when it's out. I am not r3kt, don't even have access to the "read only".

ASLR - April 30, 2017, 12:16 pm

(Apr 30, 2017 11:24 AM)xadamxk Wrote: [\[CITE\]](#) Yeah, but when you said None of what the API has to offer can do that. It could be done with write access.

During purchase the autobuy site asks user for their HF UID
Autobuy site sends PM to user with unique purchase code
User enters unique purchase code that they received via PM into the purchase form
Transaction is approved
User is linked to transaction

M?xim - April 30, 2017, 1:33 pm

I was wondering the same, its been awhile since any updates was provide .

~Dec - June 12, 2017, 6:49 pm

I know its still early days but I have 2 questions:

1. will this API ever support webhooks (or [REST Hooks](#))?
2. will it also one day support the [Verify Secret](#) feature?

Cause if the answer to both those questions is "yes" then my dream of a realtime hackforums is possible - right now it can be faked but anyone not using a realtime client will not trigger realtime events and users can impersonate each other if they have the commitment to reverse engineer client side API calls

(Looking at you Mesh - I remember you being an active member of my HF shoutbox experiment ;P)

ASLR - June 12, 2017, 6:52 pm

(Jun 12, 2017 06:49 PM)~Dec Wrote: [\[CITE\]](#) I know its still early days but I have 2 questions:

1. will this API ever support webhooks (or [REST Hooks](#))?
2. will it also one day support the [Verify Secret](#) feature?

Cause if the answer to both those questions is "yes" then my dream of a realtime hackforums is possible - right now it can be faked but anyone not using a realtime client will not trigger realtime events and users can impersonate each other if they have the commitment to reverse engineer client side API calls

(Looking at you Mesh - I remember you being an active member of my HF shoutbox experiment ;P)
At this point I think we'll be lucky if the project isn't cancelled ...

Well, it's that kind of thinking & attitude that would lead to that situation, no? Be positive and grateful. The potentials of having this API be a success far outweigh any negative bias it could ever receive - Omni has tried to emphasise that point, have trust in him - he knows what he's doing

SIM-2015410 - June 12, 2017, 10:07 pm

(Jun 12, 2017 09:09 PM)xadamxk Wrote: [\[CITE\]](#) He does know what he is doing but this project hasn't moved in weeks/months.

This project would bring HF back to life IMO.
Partly my fault, I've been swamped with work and uni finals at the moment IRL, will hopefully get some good momentum going again in a couple of weeks once these are over :)

It's okay! Understandable :) thanks for all of your hard work

TyrantKingBen - June 12, 2017, 10:19 pm

I'd be down for helping develop the API if more manpower is needed to get it rolling.

~Dec - June 12, 2017, 11:47 pm

When Mesh and I find the time we'll get more done.

Varane - June 13, 2017, 5:32 pm

Just a couple more days till I finally get access to this API.

Nick - June 23, 2017, 8:13 pm

Im so excited to see what kind of applications people make out of this.

jujuser - June 23, 2017, 8:27 pm

Omni, is there potential I can help create an Ethereum smart contract middleman service for the sale of digital content?

Charger - June 24, 2017, 10:42 am

(Jun 23, 2017 08:27 PM)jujuser Wrote: [\[CITE\]](#) Omni, is there potential I can help create an Ethereum smart contract middleman service for the sale of digital content?

You can MM in the marketplace.

You can automate it once you reach the requirements for the API.

He won't give anyone a key.

SIM-2015410 - June 26, 2017, 9:26 pm

A lot of updates coming soon, now I have some time to work. Get ready ;)

Omniscient - June 27, 2017, 2:30 pm

And I'm going to have some time to get this done too. I sort of been waiting for Mesh to free his schedule up. Hopefully we bang out some features and updates over the next 2 weeks for everyone.

Plan is to get this into phase 2 of the beta then allow Ub3r access.

webdev77 - June 27, 2017, 2:32 pm

I was kind of wondering what the status was and didn't want to ask. Sounds awesome. Definitely looking forward to seeing what this does for HF.

Sounds fantastic, can't wait to see this develop :)

Hash G. - June 30, 2017, 8:39 am

Hey,

Do you plan on adding the extra pages, like the bans.php, stats.php, negreplog.php and showgroups.php (this one needs caching though I think?)?

Thanks Omni.

Omniscient - June 30, 2017, 11:26 am

It's premature for that.

This has so much potential for the forums :)
I got to bed he's waking up. I wake up and he's going to bed. It's terrible trying to coordinate with him. He'll read this in about 12 hours.

Yep like Omni said its a bit hard to coordinate time online to discuss things, but we are making a lot of progress despite, and from the looks of things are almost ready to release a massive update ?

Omniscient - July 5, 2017, 8:06 am

We should be updating the API today. Anyone using it or app creators will need to update.

There will be versioning and friendly restful api structure.

POLY MATH - July 5, 2017, 8:09 am

Great news. Glad you didn't shelve this.

Aigrod - July 5, 2017, 10:12 am

Can't wait to play with it!. Is there any estimate on when it will be done? or available to UB3R's?

Omniscient - July 5, 2017, 11:08 am

(Jul 5, 2017 10:12 AM)DePixel Wrote: [\[CITE\]](#) Can't wait to play with it!. Is there any estimate on when it will be done? or available to UB3R's?

Today I hope to get the update live and once current bugs are fixed and I know it's running well I will open it for Ub3r.

M?xim - July 5, 2017, 11:10 am

I'll probably have to update it after the API gets updated today but I most definitely will.

I've decided to postpone the IOS version until the actual release but it'll come as well!

Charger - July 5, 2017, 11:34 am

Hopefully it's opened to Ub3r today.

Will the update have write access?

Omniscient - July 5, 2017, 11:53 am

Beta V1 is out. Making a new thread now.
