Thread: [Weco's products support Thread](#)

Weco - April 24, 2017, 2:52 pm

This is a support Thread for the following products:

- [\[>>NEW<<\] JProtect | SCANTIME FUD \(30.04.17\) | RUNTIME UD | UNIQUE STUBS | Cheap](#)
- [Mail.Crack | The most advanced & best SMTP Email Tester | Everything included](#)
- [Project M.E.S. V.2 \[Multi SMTP Email Sender\] | Better than AMS, Maxbulk, TurboMailer](#)
- [Weco's Combolist Maker - The most advanced Combolist Maker on HF | NEW | JUST 2.50\\$](#)
- [JARI | JAR File Code Injector | First of its kind | 15](#)
- [Twitter Ripper | Grow your Twitter Accounts! | Automatically Post Your Tweets!](#)
- [Email Domination | Fastest SMTP Email Cracker | Proxyless | 10\\$](#)
- [Project M.E.S. \[Mass Email Sender\] \[ONLY 2.50\\$\]](#)
- [>>NEW<< Mass File Renamer \[CHEAP\]](#)

Before you ask me for support, please take a look at the FAQ and at the responses to this Thread. Maybe your problem was already fixed once :) I will leave you -3 rep if you ask a question which is already answered in the FAQ.

Leave a reply here and use the following form:

Quote:Product: [Name of the product]

Package: [The package you purchased]

Short description of your issue:

Long and detailed description of your issue:

What did you do before the issue occurred?

Log (if available): [Uploud on pastebin.com or a similar site, link it here. Remove sensitive data or PM me the log directly if you don't want to post it here]

Command line log: [Uploud on pastebin.com or a similar site, link it here. Remove sensitive data or PM me the log directly if you don't want to post it here]

Then message me the Quote of your reply to this Thread together with your order ID.

-

Guides:

How to start it using the command line and get the command line log:

Spoiler [\(Click to View\)](#)

[Video: <https://www.youtube.com/watch?v=U4D889ZqjyY>]

How to find your order ID, your serial, and your product download link:

Spoiler [\(Click to View\)](#)

Open the mail you got from rocketr.com. It may take up to 5 hours when purchasing with BitCoin.

How to register & redeem your serial

Spoiler [\(Click to View\)](#)

1) Open the Software

2) Create an account (if you don't have one already, you can use the same account for multiple

products)

- 3) Click "Redeem Serial"
- 4) Enter your Account details
- 5) Enter the serial
- 6) Click "Redeem"
- 7) Login using the same account you redeemed the serial on

Note:

- You can't redeem the same serial twice
- You only need to redeem the serial once

F.A.Q.:

•The downloaded File opens as an archive, and contains a bunch of random files and folders. Right-click the JAR File, select "Open with", then select "Java", or use the command line as explained above.

•I don't have Java installed // 'Java' is not recognized as an internal or external command // I can't open the File
Google Java, and download it from the official site. Then install it.

•Which Java version do I need?

I would suggest you use Java 1.8 since it will work for all my products. Some will work with java 1.7, too.

•I would like a refund

I only offer refunds if my product doesn't work as promised. You'll have to speak to me within 3 days or you won't get a refund. I will only provide a refund if the issue is caused by my Software directly. After filing a correct error report with all required information, you have to give me 24h time to fix your issue.

•The cmd log contains "java.lang.OutOfMemoryError: Java heap space"

The software exceeded the allowed memory.

Solutions:

- 1) Load less data
- 2) Use fewer threads
- 3) Start it using the command line, but write "java -jar -Xmx1024m PathToTheSoftwareHere.jar" instead of "java -jar PathToTheSoftwareHere.jar" (This allows 1GB of ram, you can increment the number '1024', too)

•"Product not activated or the webserver could not be reached"

- 1) Make sure you can access weco.info in your browser.
- 2) Please make sure you login with the same account you redeemed the serial on

•The software freezes

Solutions:

- 1) Load less data
- 2) Start it using the command line, but write "java -jar -Xmx1024M -Xms1024M PathToTheSoftwareHere.jar" instead of "java -jar PathToTheSoftwareHere.jar" (This allows 1GB of ram, you can increment the number '1024', too)

If you want to use a large amount of threads for example, try using "java -jar --Xmx4096M -Xms4096M" (4 GB RAM)

•I don't answer on Skype while I am "Away", "Do not disturb" or "Offline" on Skype, same for

discord.

I have to sleep too :) Normally I will be able to help you in a few hours, just stay calm, no need to spam me using every possible contact method.

•When starting, I get the error: "Error: WebLookAndFeel.install ..."

Follow the command line guide in this thread but add -defgui at the end of the command before pressing enter. This will disable any design and set it to the standard.

•"I thought the product would have the feature xxx, but it hasn't!"

All features are always listed in the thread. Please send me a detailed PM requesting a refund containing your order ID on rocketr, and the refund address. If there really was a misunderstanding caused by me and not because you didn't read properly, you will get a full refund. If it's your fault but you report it within 12 hours after the purchase, you will get a 75% refund. After 12 hours no refunds.

When posting an Error Report, Command Line log(s) are in most cases mandatory!

JProtect requires two command line logs, one from the Stub and one from JProtect! You need to include them (if I didn't tell you something else)

The Support Thread continues in my next few replies.

Weco - April 30, 2017, 6:34 am

[Guide] Avoiding my Skype imposter

- 1) I never deal offsite without a confirmation on HF.
- 2) Make sure the Skype name is weco.sell when searching, look out for . and ,
- 3) Preferably use this button, it should be in every of my threads: [weco.sell](#)
- 4) My Skype icon and my HF Profile picture always match.

Known imposters:

weco.sell..

weco.sell.

weco_sell

[Guide] JProtect Stub Error Reporting Guide:

- 1) Run JProtect using the command line with the following command: java -jar

"[NameOfJProtectHere]".jar -debug

- 2) Disable Obfuscation

- 3) Build your Stub

- 4) Get the log of the Stub (not JProtect) from the command line

[Video: <https://www.youtube.com/watch?v=U4D889ZqjyY>]

- 5) Use the default error reporting steps as described above and add this to the form:

Quote:Name of the Software which you crypted:

Link to the official Website/Thread:

Stub Command line log:

Weco - May 3, 2017, 12:45 pm

My Computer is currently not working. I maybe have to order a new graphic card which will take some time.

I can't fix bugs while I can't access my main PC. This reply will be updated with the latest news and when I have a date when my pc should be working again.

UPDATE: Error seemed to come from my SSD, bought a new one and now testing if it works.

UPDATE2: PC is being repaired until Monday

UPDATE3: It seems to be working now again! I will test it for a few hours and then I can start coding again.

UPDATE4: Got my PC back from repair, crashed again, and now it doesn't boot again. Same issue. Spent so far 250€. Going to buy a new PC, so this will take several more days.

UPDATE5: Currently testing it again, seems to be working fine now.

Galako - May 5, 2017, 7:53 am

Issue with one of your products.

Product: Mail.Crack

Package: Standard

Short description: email list, password list option does not seem to be working properly.

Long description: Loaded single email in the "Load email list" tab and a list of 10k passwords in the "Load password list" tab. Clicked on "Start cracking" and the program finished working within seconds. There's only a few lines in the log and under "Export & Stats" tabs it says Cracked 0 accounts, Failed to crack 0 accounts. Log sent in PM

Got your Mail.Crack and there are some problems that everytime and im sure everyone encountering.

it gives [Error] after decent amount of every try when using @gmail @yahoo popular public email even used other smtps.

Also even include real password email combos try every possible ones still giving error need detailed instructions for this.

I think it not find domains right email server to connect & crack.

Hope you give detailed info on it , not like before.

Of course I will provide support regarding your issue. Else this would be a rip-off. Just no guidance/tutorial :)

(Dec 14, 2017 10:42 AM)Winry Rockbell Wrote: [\[CITE\]](#) I just tested it on an empty VM. Still doesn't work. Sorry for the late response! Overlooked your first post somehow.

Please try running adding ' -defgui' to the cmd command when running it. It looks like a weird issue with the GUI.

And do you have any AV or a similar Software active interfering with my product? Or locking directories?

"java.io.IOException: Unable to delete directory C:\Users\LukasW\weco\JProtect\Stub."

Because it looks like JProtect is unable to clean up the temp files.

Winry Rockbell - December 14, 2017, 11:03 am

Quote from my support thread:

•I don't have Java installed // 'Java' is not recognized as an internal or external command // I can't open the File

Google Java, and download it from the official site. Then install it.

YOU did not answer my PMs, are rude and now try to tell me I dont provide support? You probably didn't even pay for support.

AB33770 - December 18, 2017, 5:52 am

Hi everything its ok

1 more question can u tell me if my program its scanning email+pass fr smtp it is working

nested exception is:

2) Send me your order ID via PM to get nontechnical Support.

foxtrott50 - January 9, 2018, 3:28 pm

Product: JProtect

Package: Premium

NameSoftware which you crypted: UnknownRat

Short description of your issue: stops at 50 percent when trying to crypt

Long and detailed description of your issue: it stops at 50% after I click build, with a popup as shown in the print screen image <http://prntscr.com/hy9i19> I follow the instruction in the popup and the crypting completes but the size is still the same and the file not crypted.

What did you do before the issue occurred? Installed programs; Java 8 update 151 (64-bit), Java 9.0.1 (64-bit) and Java® SE Development Kit 9.0.1 and set variables.

Command line log for jprotect: <https://pastebin.com/XKuJYJha>

Command line log for crypted stub: <https://pastebin.com/Lmc4EGAv>

PS: skype name is spitfire2013 and I would be grateful if you could give a TeamViewer assist.

TheEnderxHacker - January 10, 2019, 3:43 pm

download doesnt work 404 please help

Weco - March 18, 2019, 5:19 am

I am now hopefully back after a break I had to take because of personal issues (don't worry, no legal issues). I am really sorry for the disruption of my services.

Important Update

All my products will be migrated to the Contract System in the following days, requiring a major update to my licensing system. To migrate your account to the new licensing system, please contact me via HackForums private message. Include your Email linked to the product you are using in this PM.

Short description of your issue: It tells me I can't login because the hwid have to be resetted from the support

Long and detailed description of your issue: I have sent you the E-mail which I registred in a pm here

monero121 - August 31, 2021, 4:12 pm

hi what free miner are you using ? ive been trying to sort one out all day and i downloaded github unsancrum today, set it to work on my laptop took of stealth mode and nothing, then i tried it with ethrum by him and nothing no cpu usage... no workers registered ,then suddenly 2 hours later after id deleted the files the file comes up using my cpu on max, i did st it to max on a couple of attempts at re building the rat, i probably re built and tried to use it 10 times over, am i being ratted inside the rat from that file or does it have some kind of delay to it...is this working for everyone?
