Thread: [How to put CFW on your 3DS \[A9LH\]](#)

Thomas Meme - April 24, 2017, 5:21 pm

This is a thread is for a website called 3ds.guide

I do not own this website and I am not responsible for a bricked device (rare)

First to start you need to figure out what firmware your on anything from 2.1.0-11.3 will work just fine.

Now that you know this you can follow the guide on this website:[3ds.guide](#)

I have successfully hacked three 3ds's with this method

Here are some disclaimers and warnings

You could brick your device rare but follow this guide 100% especially if a n3ds user be at least slightly skilled with a computer. All you are doing is dragging and dropping files so at least know that

If you want to download the files as fast as possible use this website:[Homebrew Files](#) and put your firmware version and N3DS or Old.

You need to change your text where it says "I am responsible" to "I am not responsible"

You're welcome, I hope people find it useful.

Have a nice day! :)
